## VISION AND MISSION OF THE INSTITUTION

### Vision

To emerge as a leader among the top institutions in the field of technical education

### Mission

**M1:** Produce smart technocrats with empirical knowledge who can surmount the global challenges

**M2:** Create a diverse, fully-engaged, learner-centric campus environment to provide quality education to the students

**M3:** Maintain mutually beneficial partnerships with our alumni, industry, and Professional associations  
Vision of the Department

### Vision of the Department

To empower the Electronics and Communication Engineering students with emerging technologies, professionalism, innovative research and social responsibility.

### Mission of the Department

**M1:** Attain the academic excellence through innovative teaching learning process, research areas & laboratories and Consultancy projects.

**M2:** Inculcate the students in problem solving and lifelong learning ability.

**M3:** Provide entrepreneurial skills and leadership qualities.

**M4:** Render the technical knowledge and skills of faculty members.

### Program Outcomes (POs):

**PO 1: Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

**PO 2: Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

**PO 3: Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

**PO 4: Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

**PO 5: Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

**PO 6: The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

**PO 7: Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

**PO 8: Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

**PO 9: Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

**PO 10: Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

**PO 11: Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

**PO 12: Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

### **Program Specific Outcomes (PSOs):**

**PSO1:** Applying knowledge in various areas, like Electronics, Communications, Signal processing, VLSI, Embedded systems etc., in the design and implementation of Engineering application.

**PSO2:** Able to solve complex problems in Electronics and Communication Engineering with analytical and managerial skills either independently or in team using latest hardware and software tools to fulfil the industrial expectations.

**Program Educational Objectives (PEOs):**

**PEO1: Core Competence:** Graduates will have a successful career in academia or industry associated with Electronics and Communication Engineering.

**PEO2: Professionalism:** Graduates will provide feasible solutions for the challenging problems through comprehensive research and innovation in the allied areas of Electronics and Communication Engineering.

**PEO3: Lifelong Learning:** Graduates will contribute to the social needs through lifelong learning, practicing professional ethics and leadership quality

**Mapping of Programme Educational Objectives with Mission of the Department**

DATE 15/10/2020

BOS-9

SEU - unit 1 title may be solar radiation and measurements  
PQ - ISS standards to be included in unit 2, 3 and 4.

### Open electives.

JOT - No change

FSM - Interchange the unit 3 & unit 4

Robotics - No change.

ESD & FC - No change.

EV - Course name may be changed as fundamentals of electric vehicles

JOT and ESD & FC subjects can be included in professional electives for EEE students with different name.

BEEE - The subject content in all the 5 units are revised based on the feedback from the stock holders  
One credit course - Board is accepted to conduct three one credit courses from 5<sup>th</sup> semester onwards for this 2018 regulation

BTech (CSBS) - Principles of electrical engineering course content also discussed and verified.

### PGI 2019 regulation.

Power system Protection course may be added as elective course in third semester

electronics

Analog and digital electronics subject codes are revised

**CENTRE FOR ACADEMIC COURSES**  
**ANNA UNIVERSITY**  
CHENNAI - 600 025

03 06 2022

**Dr. S. HOSIMIN THILAGAR**  
**DIRECTOR**

Letter No 3769/AU/CAC/2022

To  
The Principals  
Autonomous Institutions affiliated to Anna University

Respected Sir/Madam,

Sub Approval from Board of Studies for EEC Elective "Professional Readiness for Innovation, Employability and Entrepreneurship" - Reg  
\*\*\*\*\*

Anna University in association with Department of Information Technology Govt. of Tamil Nadu is launching a program called Naalaiya Tiran - an Experiential Project Based Learning initiative to empower the students with enhanced professional and technical skills.

This is a joint initiative of Anna University, ICT Academy of Tamil Nadu, NASSCOM and IBM, and is supported by the Tamil Nadu Skill Development Corporation under the Naan Mudalvan scheme of the Govt. of Tamil Nadu.

As part of this program, Anna University is offering an EEC category MANDATORY ELECTIVE course entitled "PROFESSIONAL READINESS FOR INNOVATION, EMPLOYABILITY AND ENTREPRENEURSHIP" with 3 credits (as an extended 4-5 months Hackathon) to all the 6<sup>th</sup> semester students (of B.E. CSE, B.Tech. IT, and B.E. ECE). They will earn the credits in the 7<sup>th</sup> semester on completion of this course. This course has been approved by the Board of Studies, Faculty of Information and Communication Engineering, Anna University.

In order to facilitate the present sixth/seventh semester B.E./B.Tech. CSE/IT/ECE students in your institutions to study this course, you are requested to get the necessary approval / ratification from the appropriate Boards of Studies and offer this elective mandatorily in place of a 3-credit Professional Elective in the 7<sup>th</sup> semester. The syllabus and evaluation pattern for the course as approved in the Board of Studies of Anna University (Non-Autonomous institutions) are enclosed for your perusal.

We also request you to use the following link for the registration of faculty in various roles  
<https://careereducation.smartinternz.com/>

Requesting your kind cooperation in this regard.

Yours faithfully,

**DIRECTOR**

**Subject:** Request for Approval - Adding Professional readiness for Innovation, Employability and entrepreneurship - Reg.

**CAUTION** This email has originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Professor,

Warm wishes. Principal of our college received a letter ( Letter No: 3769/AU/CAC/2022) from Dr.S.Hosimin Thilagar, Director, Centre for Academic Courses Anna University. As per the letter dated 03.06.2022, they have asked to add course professional readiness for Innovation, Employability and entrepreneurship for B.E.ECE. So we had included this course for Seventh semester ECE students as Professional elective with the course code and Name: 18ECE037L Professional readiness for Innovation, Employability and entrepreneurship, by skipping open elective in seventh semester. Kindly give approval on this regard, which will be passed in the forthcoming BoS meeting.

So the Seventh semester Open elective is replaced with Professional Elective.

Kindly give approval to the above through mail.

Note:

1. Attached the Letter copy from Anna University.
2. Professional Readiness for Innovation, Employability and Entrepreneurship Syllabus and evaluation methods.

### 3. Word Copy Of Syllabus

Thank You Sir.

*With regards,*

**Dr.S.PALANIVELRAJAN, M.E., M.B.A., Ph.D., D.Litt (USA)..**

#### **Vision of ECE:**

To empower the Electronics and Communication Engineering students with emerging technologies, professionalism, innovative research and social responsibility.

#### **Mission of ECE:**

- M1: Attain the academic excellence through innovative teaching learning process, research areas & laboratories and Consultancy projects.
- M2: Inculcate the students in problem solving and lifelong learning ability.
- M3: Provide entrepreneurial skills and leadership qualities.
- M4: Render the technical knowledge and skills of faculty members.

18ECE024T	Optical Networks	3	0	0	3

## 2. PG (Communication Systems)

### 2.1. To finalize the syllabus of 3<sup>rd</sup>, 4<sup>th</sup> semester syllabus – R2019

- Wireless Embedded Systems, Remote Sensing, PCB design Technology, Communication Interfaces – No changes required in the syllabus content, check for CO-PO mapping

#### General Suggestions

- Course outcomes and CO-PO mapping needs to be matched properly.
- Over all Grouping of electives can be made and also based on the credits, which can be offered in any semesters. Some electives with 3 and some are with 4 credits. Hence, electives with 4 credits need to be grouped and offered to students for any one elective course.
- General aptitude, career skills and creative thinking course can be made as mandatory and credits can be utilized for some core courses
- VLSI, Embedded systems can be brought under core courses, If the proposed curriculum does not permit to convert as core, they need to be made as compulsory.
- Reduce theory and increase laboratory contents
- For physics and chemistry credits can be reduced to 4
- Measurement and Instrumentation can be made as elective
- Minor projects one per year is enough so that credits can be saved
- Can include k levels for the course
- Subjects relating to Communication and Electronics should be of equal
- MOOC/NPTEL based course Credits must be allocated as per credits offered by them instead, we fix it as 1 credit.
- Novelty is required in lab experiments which to be seek by the industries.

DEPARTMENT OF MECHANICAL ENGINEERING

10<sup>th</sup> BOARD OF STUDIES MEETING - 02.06.2021

MINUTES OF MEETING

- Board of studies meeting was conducted virtually by BOS Chairman
- BOS Chairman welcomed the University Nominee, Subject Experts, Industry Experts, Younger Faculty members and Students
- BOS members had gone through the department Vision, Mission, PEOs, POs and PSOs in detail
- Revision 2018 curriculum and syllabus of BE Mechanical Engineering and 2019 regulation of MF Manufacturing Engineering has been discussed in the BOS Meeting in detail
- As per the stakeholder's feedback, the following elective courses have been recommended for Regulation 2018 BE Mechanical engineering programme.

18MEF0411 Total Quality Management and Reliability

18MEF042T Agile Manufacturing

18MEF0431 Artificial Intelligence and Machine Learning

18MEF044T Enterprise Resource Planning

- The following new course has been included in the open elective to offer for other Engineering programmes as per the recommendation

18MLO0061 3D Printing Technology

- The following one credit courses have been included in the list to support for core requirements in the field of welding technology as per the stakeholder feedback

18MI X025J-Advanced Welding Processes

18MI X026J - Welding Engineering

18MI X027J - Weldability of Materials

- The BOS members recommended to follow the same contents of other courses in BE Mechanical Engineering for the Regulation 2018 and also suggested to follow existing contents Regulation 2019 for MF Manufacturing Engineering

  
BOS Chairman - Mechanical

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING  
BOARD OF STUDIES (VIRTUAL MEETING)

DATE: 27.10.2020

MEETING NO : 09

TIME : 11.30 AM

Minutes of the Meeting

- 9.1 Highlights of the Institution is presented by the board chairman
- 9.2 Highlights of the Department is presented by the board chairman.
- 9.3 Confirmation of the minutes of 8<sup>th</sup> BOS Meeting held on 11.03.2019
  - The minutes of 8<sup>th</sup> Board of Studies Meeting held on 11.03.2019 was confirmed
- 9.4 Discussion on – Agile Methodology – TCS recommended Industry Elective course
  - Syllabus content framed and offered by TCS end, is presented in the discussion forum.
  - The members felt that the content is well framed and the students will really get an exposure on project development using 'Jile'.
- 9.5 Discussion on one credit courses offered by the department and the one credit course offered by TCS – Data Center and Cloud Basics
  - The following one credit courses presented are verified and suggested to offer for computer science and engineering students( Curriculum- R2018).
    - ✓ Animations
    - ✓ Problem Solving using C++
    - ✓ ReactJS
    - ✓ Statistical Analysis using R
    - ✓ Data Center and Cloud Basics
    - ✓ Ethics in Cyber Security
    - ✓ MongoDB
  - Data Center and Cloud Basics content framed by TCS is presented and is recommended by all members to offer as an one credit course (Curriculum- R2016 and R2018) for Computer Science and Engineering and other Engineering stream students also.
- 9.6 Discussion on B.E – CSE – Regulation 2018 – Syllabus for 5<sup>th</sup> to 8<sup>th</sup> Semester Courses
  - The members verified the syllabus from 5<sup>th</sup> semester to 8<sup>th</sup> semester courses of regulation 2018

3. Business Intelligence and its Applications
4. Insight into Cloud Computing
5. Developing Web Applications in .NET
6. Internet of Things
7. Introduction to Mainframes
8. Machine Learning
9. Mobile Application Development
10. Soft Skills
11. Software Testing
12. User Interface Technologies - Part I
13. User Interface Technologies - Part II

- Among the above courses, the members recommended the below list of courses to be included in the curriculum suitably as a Professional Core / Elective

1. Big Data and Analytics
2. Building Enterprise Applications
3. Insight into Cloud Computing
4. Developing Web Applications in .NET
5. Internet of Things
6. Software Testing
7. User Interface Technologies - Part I
8. User Interface Technologies - Part II

9.8 Discussion on Open Elective Courses - Syllabus for other Engineering Stream students

- The members suggested to include Software Engineering fundamental concepts in the first unit of Software Development using Agile.

9.9 Any other points raised by the members

- The members recommended to include one course related to Linux programming, since it has got a high impact on working environment both Industry / Academia at abroad.

  
Dr. S. Thilagamani

Chairman-Board of Studies - CSE

**Dr. S. THILAGAMANI, M.E., Ph.D.,**  
Professor, HoD & Dean,  
Computer Science & Engineering  
M. Kumarasamy College of Engineering  
KARUR- 639 113.

Category	Course Code	Course Name	Hours / Week			C									
			L	T	P										
H	18LEH101J	<b>TECHNICAL ENGLISH</b>	2	0	2	3									
<b>Prerequisite Course (s)</b>															
NIL															
<b>Course Objective (s):</b>															
The purpose of learning this course is to:															
CLR-1	Analyze the importance of communication in personal, professional contexts. Identify proper English pronunciation														
CLR-2	Strengthen vocabulary and grammar. Enhance listening and writing comprehension. Review films and documentaries														
CLR-3	Writing brief paragraphs using appropriate techniques. Enhance their English fluency in speaking														
CLR-4	Write effective essays, stories. Experience workplace communication aspects														
CLR-5	Research on a topic and write a comprehensible academic project reports. Make effective presentations														
<b>Course Outcome (s) (COs):</b>															
At the end of this course, learners will be able to:															
CO1	Identify types, modes, channels and barriers of communication. distinguish different speech sounds, pronounce correctly														
CO2	Identify, rectify the errors in the use of grammar and vocabulary. Improve listening and writing skills														
CO3	Transfer a topic idea into a cohesive paragraph using appropriate cohesive devices. Improve the fluency of speaking skills														
CO4	Construct ideas into logical and coherent essays. Understand better the workplace culture														
CO5	Identify the steps involved in writing an academic project report. List and practice skills need for making a presentation

UNIT I	COMMUNICATION	6
Definition, Process of communication - (Filling in-Class Worksheets) - Verbal and Non-Verbal Communication (Individual and Group Activities - Role play)-Other Types of Communication: General-Technical-Formal, Informal- External, Internal (Write upon a selected type of communication) - Listening, Speaking, Reading, Writing (Group activity (Newspaper) – Discussion and Feedback) - Communication and Language Barriers (Individual Activity- Sharing of Personal Experiences)-Body language (Mime).		
UNIT II	VOCABULARY AND GRAMMAR	7
Words with Foreign Roots, Word Formation – Inflectional, Derivational Prefixes, Suffixes(Quiz - Identifying the Borrowed roots and Their Meanings-Worksheet Exercise)-Synonyms and Antonyms and Standard Abbreviations(Context Based Activity / Learner Compiling Standard Abbreviations from Core Subject)-Homonyms and Homophones(Fun Activities – Worksheets- Cross Words)-Articles, Tenses(Exercise through Worksheets- Individual Activity -Peer Correction- Open Discussion)- Noun-Pronoun Agreement and Subject- Verb Agreement(Identifying and Learning through Error Analysis – Worksheets)-Misplaced Modifiers - Prepositions-Prepositional verbs and Phrasal verbs(Learn through Practice – Placing Same Modifier in Different Places in a Sentence)-Prepositions- Prepositional Verbs and Phrasal Verbs(Filling in-Class Worksheets)		
UNIT III	DISCOURSE TECHNIQUES	7
Sentence Structure, Phrases and Clauses(Exercise: Worksheet, Identifying Phrases, Clauses, Compound, Complex Sentences)-Developing Ideas into Paragraphs –Cohesion Markers(Identify Topic sentence in a Paragraph, Writing a Paragraph Based on a Topic)- Inputs on Writing Precisely, Redundancies, Wordiness- Repetition-Chichés(Error Analysis and Editing)-Defining, Describing Technical Terms(Writing Definitions- Product and Process Description)-Inputs on Classifying/Categorising and Sequencing Ideas with Relevant Diagrams(Writing a Passage on the Given hints, Tree Diagram, Classification Table and Flow Chart)- Importance of Punctuation – Miscommunication – (Fun Activities - Worksheets for Appropriate Punctuation – Written)- Errors in Punctuation(Fun Activities - Worksheets for Appropriate Punctuation – Written)		
UNIT IV	WORKPLACE COMMUNICATION	6
Reading Comprehension, Guidelines questions (Referential, Critical, Interpretative)( Practice Exercise) - Precise-writing Guidelines( Practice Exercise) - Summarising (Group Activity (Oral/Written) on the Given Passages)- Essay Writing Guidelines: Introduction, Elaboration and Conclusion with Examples(Individual Activity (Written) on the Given Topic) Organisational Report Writing - Progress Report- Guidelines (Writing a Progress Report)-Interview Skills(Mock Interview).		
UNIT V	PROJECT WRITING	5
Topics for Project Writing(Discussion)- Collection of Data – Avoiding Plagiarism-Authenticity and Credibility of Data(Collection of Data for Verification)- Guidelines for Writing: Outline- Objectives- Background- Methodology-Discussion-Documentation(Drafting an Outline & Preparing References)- Discussion Using Sample Project(Writing the First Draft on the Selected Topic)-Checklist for Project Format (PPT)( Self-Verification and Submission of Final Draft).		
LIST OF EXPERIMENTS		14
<ol style="list-style-type: none"> <li>Often Mispronounced sounds (Audio Visual Material - Listening to minimal pairs and reproducing)</li> <li>Barriers of communication Language barriers – videos (Identifying the Language Barriers of communication – Written)</li> <li>Short Biographical Account on Famous Personalities –Video(Oral Paraphrasing of the Content Shown)</li> <li>Listening to Long Conversations, Daily Life (Identify Various Communication Contexts and Answering Questions – Collocation)</li> <li>Introduction to Englishes -British and American –Videos (Discussion on Difference between British and American Words)</li> <li>Speaking - Practice Activity – Brain Storming – Mind Mapping (Just a Minute)</li> </ol>		

7. Describing a Scene or Event –Videos (String Narration – Describing an Event or a Scene)
8. Technical Communication – Interpreting Data (Group Activity - Interpretation of Data - Oral Presentation)
9. Sample Case Studies for Work Ethics – Videos (Debate on the Videos Shown)
10. Learning Interview Techniques through Models (Mock Interview)
11. Guidelines for Preparing a PPT; Presentation Techniques (Preparing PPT on the Topic of Learners' Choice)
12. Formal Presentation

Category	Course Code	Course Name	Hours / Week			C									
			L	T	P										
B	18MAB101T	CALCULUS AND LINEAR ALGEBRA	3	1	0	4									
<b>Prerequisite Course (s)</b>															
NIL															
<b>Course Objective (s):</b>															
The purpose of learning this course is to:															
1	Apply the Matrices in problems of Science and Engineering														
2	Utilize Taylor series, Maxima minima and Jacobian in solving real- time application problems														
3	Utilize the concepts of radius of curvature, evolute, envelope in problems of Science and Engineering														
4	Apply the concept of Differential Equations in problems of Science and Engineering														
5	Applications of Sequences and Series in all problems involving Science and Engineering														
<b>Course Outcome (s) (Cos):</b>															
At the end of this course, learners will be able to:															
CO1	Apply Matrices, Eigenvalues and Eigen Vectors and Reduction of Quadratics form in Science and Engineering problem solving														
CO2	Apply Maxima and Minima, Jacobian, and Taylor series to solve problems in Science and Engineering														
CO3	Identify Radius, Centre, envelope and Circle of curvature and apply them in the problem solving														
CO4	Solve the different types of Differential Equations in Science and Engineering applications														
CO5	Apply convergence and divergence of series using different tests and apply sequences and Series in the problem solving														
<b>CO-PO Mapping</b>

<b>UNIT I</b>	<b>EIGEN VALUE PROBLEMS</b>	<b>9 + 3</b>
Characteristic equation- Cayley-Hamilton theorem (excluding proof). Eigen values and Eigen vectors of a real matrix – Properties- Orthogonal transformation of a symmetric matrix to diagonal form-Quadratic form-Reduction of quadratic form to canonical form by orthogonal transformation.		
<b>UNIT II</b>	<b>FUNCTIONS OF SEVERAL VARIABLES</b>	<b>9 + 3</b>
Partial derivatives-Euler's theorem for homogenous functions-Total derivatives Differentiation of implicit functions-Jacobians-Taylor's expansion-Maxima and Minima-Method of Lagrangian multipliers.		
<b>UNIT III</b>	<b>APPLICATIONS OF DIFFERENTIAL CALCULUS</b>	<b>9 + 3</b>
Curvature and Radius of curvature – Circle of curvature and Centre of curvature-Envelope Evolute as Envelope of Normals.		
<b>UNIT IV</b>	<b>DIFFERENTIAL EQUATIONS OF SECOND ORDER</b>	<b>9 + 3</b>
Second order linear differential equations with constant coefficients- Particular Integrals for $x^n$ , $e^{ax}$ , $\cos ax/\sin ax$ , $e^{ax}\cos bx/e^{ax}\sin bx$ - Method of variation of parameters-Cauchy and Legendre's linear equation Simultaneous first order linear equations with constant coefficients.		
<b>UNIT V</b>	<b>SEQUENCES AND SERIES</b>	<b>9 + 3</b>
Sequences: Definition and examples-Series : Types and Convergence - Series of positive terms-Test of convergence: Comparison test, D'Alembert's ratio test, Integral test, Raabe's Root test and Log test-Alternating series-Leibnitz's test-Series of positive and negative terms(Alternating series)-Absolute and Conditional convergence.

UNIT I	ELECTROSTATICS AND DIELECTRIC MATERIALS	9+3
<p>Del-divergence-curl and gradient operations in vector calculus-Gauss-divergence and Stoke's theorem-Electric field and electrostatic potential for a charge distribution-Gauss' law and its applications-Laplace's equations for electrostatic potential-Poisson's equations for electrostatic potential-Solving Problems-Concepts of electric current-Continuity equation-Laws of magnetism-Paraday's law-Ampere's law-Maxwell's equations-Solving Problems-Polarizations, permeability and dielectric constant -Polar and non-polar dielectrics -Types of polarization-Frequency and temperature dependence-Internal field in a field-Clausius-Mossotti equation-Solving Problems</p>		
UNIT II	MAGNETIC AND SUPERCONDUCTING MATERIALS	9+3
<p>Magnetization, permeability and susceptibility-Classification of magnetic materials-Ferromagnetism-Concepts of ferromagnetic domains Hysteresis-Solving Problems -Properties and applications of ferromagnetic materials Hard and soft magnetic materials Ferrimagnetic materials - Magnetic bubbles - Ferrites- Solving Problems-Superconductivity -Properties of superconductivity -Type I &amp; Type II superconductors-High T<sub>c</sub> superconductors -SQUID - CRYOTRON-MAG, JEV-Solving Problems</p>		
UNIT III	QUANTUM PHYSICS	9+3
<p>Introduction to Quantum mechanics-Explanation of wave nature of particles-Black body radiation-Compton effect-Solving Problems-Photoelectric effect-de Broglie hypothesis for matter waves -Physical Significance of wave function -Time independent Schrödinger's wave equation -Time dependent Schrödinger's wave equation -Solving Problems-Particle in a 1D box -Normalization -Born interpretation of wave function -Properties of Matter waves-Verification of matter waves-(<math>\alpha</math>, <math>\beta</math>) Thomson Experiment-Solving Problems</p>		
UNIT IV	WAVE OPTICS	9+3
<p>Introduction to interference-Introduction to diffraction-Fresnel diffraction-Fraunhofer diffraction-Fraunhofer diffraction at single slit-Fraunhofer diffraction at double slit-Solving Problems-Fraunhofer diffraction at multiple slit-Diffraction grating-Characteristics of diffraction grating-Applications of diffraction grating-Polarization by reflection-Polarization by double refraction-Solving Problems -Scattering of light-Circular polarization-Elliptical polarization-Optical activity-Fresnel's relation -Brewster's angle-Solving Problems.</p>		
UNIT V	LASER AND FIBER OPTICS	9+3
<p>Absorption and emission processes-two level Einstein's theory of matter radiation A and B coefficients-Characteristics of laser beams-Amplification of light by population inversion-Threshold population inversion-Essential components of laser system and pumping mechanisms-Solving Problems-Nd:YAG laser-Semiconductor laser-CO<sub>2</sub> laser Vibrational modes- CO<sub>2</sub> laser-energy level-Optical fiber-physical structure-Total internal reflection-Solving Problems-Numerical aperture Acceptance angle-Losses associated with optical fibers-Classification of optical fibers-Optical fiber communications system-Optical sensors-Solving Problems</p>

Curriculum and Syllabus 2018 Regulation

18

**UNIT I INTRODUCTION TO C**

9

Evolution of Programming & Languages - Problem solving through programming - Creating algorithms - Drawing flowcharts - Writing pseudocode - Evolution of C language, its usage history - Input and output functions Printf and scanf - Variables and identifiers - Expressions, Constants - Keyword, Single line and multiline comments- Values, Names, Scope - Binding, Storage Classes - Input and Output Statement - Numeric Data types - Non-Numeric Data types: char string - Non-Numeric Data types: string - Increment operator - decrement operator - Comma, Arrow and Assignment operator - sizeof operator - Bitwise operators - Relational Operators - logical Operators - Conditional Operators - Operator Precedence

**UNIT II CONTROL STATEMENT AND ARRAY**

9

If statement in expression - L value and R value in expression - Control Statements – if and else – else if – nested if - switch case - Iterations – While loop - do..While loop - For loop - Goto, break, continue - Array Basic and Types - Array Initialization and Declaration - Initialization: one Dimensional Array, Accessing - Indexing one Dimensional Array Operations - Initializing and Accessing 2D Array - Initializing Multidimensional Array - Array Advantages and Limitations

**UNIT III STRINGS AND FUNCTIONS**

9

String Basics - String Declaration and Initialization - String Functions: gets(), puts(), getch() - putchar(), printf()atoi(), strlen()streat(), strcmp()sprint(), strstr()Strrev(), strtok()Functions basics - Functions declaration and definition - Types: Call by Value - Call by Reference - Function with Arguments and no Return Values - Function without Arguments and no Return Values - Function with Arguments and Return Values - Function without Arguments and Return Values - Passing Array to Functions - Returning array from functions - Formal and Actual Parameters - Recursion Functions - Advantages of using Functions

**UNIT IV POINTERS**

9

Pointers Basics - Address operator - Pointer Declaration - dereferencing pointers - Size of Pbinter Variable and Pointer Operator - Void Pointers and size of Void Pointers - Arithmetic Operations - Incrementing Pointers - Constant Pointers - Null Pointers - Pointers to array elements - Pointers to strings - Function Pointers

**UNIT V STRUCTURES AND UNIONS\***

9

Structure basics & declaration - Initializing Structure, Accessing members - Nested structure - Array of structure - Accessing elements in a structure array - Passing Array of structure to function - Union Basic and declaration - Accessing Union Members - file: opening, defining - File closing, File Modes, File Types - Writing contents into a file - Reading file contents - Appending an existing file - File permissions and rights - Changing permissions and rights

**LIST OF EXPERIMENTS**

15

1. Programs on Operators
2. Programs on Control statements

18

3. Programs on one Dimensional Array
4. Programs on Two Dimensional Array
5. Programs on String Handling
6. Programs on Function using Call by Value
7. Programs on Function using Call by Reference
8. Programs on Function prototypes
9. Programs on Passing and returning Array to Functions
10. Programs on Recursion Functions
11. Programs on Pointers
12. Programs on Structure
13. Programs on Union
14. Programs on Files

**Prerequisite Course (s)**

Nil

**Course Objective (s):**

- Select building materials and identify the components of a building
- Identify the various transportation systems, bridges, dams and water supply system
- Apply the concept of Harnessing energy from various energy sources
- Know the working of IC engines and identify the sub system requirements
- Apply manufacturing processes, casting, forming. List machining operations, lathe, drilling. Identify process of welding

**Course Outcome (s) (COs):**

CO1	Identify the building materials and its applications
CO2	Identify different transportation system, water supply system and its applications
CO3	List the basic components and analyze the working of major power plants
CO4	Identify the working of IC engines and understand the need of various auxiliary systems
CO5	Identify manufacturing processes; casting, forming. List machining operations; lathe, drilling. Identify process of welding

<p><b>UNIT I</b></p> <p>Introduction to Civil Engineering, Building Materials, History, Disciplines in Civil Engineering, Early constructions and development over time, Ancient Monuments: Peruvudaiyarlai or Brihadiswarar Temple, Kallanai dam, Grand Anicut, Taj Mahal, Golconda fort, Angkor Wat, Pyramids of Giza, Colosseum</p> <p>Development of various materials, Methods of Construction, Building Materials - Stone - Classification of Rocks, Quarrying, Dressing, Properties and Use of Stone Mortar, Plain and Reinforced Cement Concrete Grade and properties and uses, Necessity of Special Concrete: Self Compacting Concrete, Construction Chemicals (Plasticizers), Recycling, construction, demolition wastes, Buildings, Classification of Buildings, Selection of site for a building, Components of Buildings, Soil, General types of soil, Bearing Capacity Factors affecting bearing capacity, Foundations - Functions, General types of foundation, Shallow foundations</p>	<p><b>BUILDING MATERIALS</b></p>	<p>9</p>
<p><b>UNIT II</b></p> <p>Cement concrete flooring, Marble flooring, Granite flooring, Ceramic tile flooring, Roofs, Types of roofs, Madras terrace roof, Reinforced concrete roof, Trussed roof, Roof Coverings, Types, Weathering course, Types, Mode of Transportation - Highway - Classification of Roads, Cross section details of flexible pavements, Railway - Zone and Headquarters, Permanent way and its requirement, Components of Permanent way, Bridges, Components of Road, Types, Dams, Purpose, Classification, Gravity dams, Advantages and Disadvantages, Elements of protected Water Supply system, Objective, Quantity of water, Design period, Per capita demand, Factor affecting per capita demand, Sources of Water Supply, Standards of Drinking water, Drinking Water Treatment, Objectives, Treatment plant process, Sewage Method of collection, Sewage treatment and disposal</p>	<p><b>TRANSPORTATION AND WATER SYSTEM</b></p>	<p>9</p>
<p><b>UNIT III</b></p> <p>Coal based thermal Power Plant, layout, components description, working, advantages, disadvantages, Hydro electric power plant, layout, components description, working, advantages and disadvantages, Nuclear power plant, fission and fusion reactions, Nuclear reactor, components description, layout, working, merits and demerits of boiling water reactor, Layout, working, merits and demerits of pressurized water reactor, Gas turbine power plants, component description, working and types, gas turbines, methods to improve performance, Layout and working of open cycle plant with intercooling, reheating, regeneration, Solar Thermal power plant, layout of Flat plate collector based plant, central receiver type plant, advantages, disadvantages, Wind energy, conversion system - wind turbine types, Working, advantages and disadvantages, Ocean Thermal Energy Conversion system, layout of open cycle, Layout of closed cycle, advantages, disadvantages</p>	<p><b>POWER PLANTS</b></p>	<p>9</p>
<p><b>UNIT IV</b></p> <p>Engine - Classification, operations of 2 stroke &amp; 4 stroke, Comparison of SI &amp; CI engines, Fuel supply system and Battery ignition system, Magneto ignition system of SI engine, Working of a simple carburetor, (CI) MPI &amp; RDI, Lubrication system of an engine, Functions and Working of mist and forced feed lubrication system, Cooling system of an engine - Working of air cooled (fans), Water cooled engines (forced circulation), Alternate fuels for IC Engines - Liquid fuels - methanol, ethanol, vegetable oil, Biodiesel, Gaseous fuel - Hydrogen, CNG, LPG, properties, advantages, disadvantages, Emissions from engine - Emission standards - Euro IV, Emission control measures - Catalytic converter, Exhaust gas recirculation, Introduction to electric vehicles, Hybrid and autonomous vehicles</p>	<p><b>INTERNAL COMBUSTION ENGINES</b></p>	<p>9</p>
<p><b>UNIT V</b></p> <p>Casting introduction and history, expendable mold casting process, Production steps in a typical sand casting process, components including patterns and core, Other expendable mold casting - shell molding, vacuum molding, expanded polystyrene process, Investment casting, Permanent mold casting - hot chamber and cold chamber die casting &amp; Permanent mold casting - Semi centrifugal and centrifuge casting, Metal forming - introduction and classification into Forming dies, Bulk deformation, hot, cold forming processes, hot rolling, cold rolling process, Rolling mill, classification into hot and cold extrusion processes</p>	<p><b>CASTING AND FORMING PROCESS</b></p>	<p>9</p>

processes, Sheet metal working applications Cutting operations shearing, blanking, punching, cutoff, parting, slotting, perforating, notching, trimming, shaving, fine blanking, Bending operations V bending, edge bending, flanging, hemming, seaming, curling, spring back effect, Drawing operations, its defects, coining, embossing, ironing, lancing, twisting

**Text Book (s)**

1. Dr V Rameshibabu, "Basic Civil and Mechanical Engineering", VRB Publishers Pvt Ltd, 2017

**Reference (s)**

1	Serope Kalpakjian, Steven Schmid, "Manufacturing Processes for Engineering Materials", Pearson, 2016
2	Debal, Larry I. Boston, Patricia G. Westra, Kayla I. Black, Veatch, "Power Plant Engineering", Kluwer Academic Pub., 1995
3	Andy Walker, "Solar Energy", John Wiley & Sons, 2013
4	John B. Heywood, "Internal Combustion Engine Fundamentals" Tata McGraw Hill Education, 2017
5	Kumar, T. Leemulesu Marfan and Murah, G. "Basic Mechanical Engineering", Suma Publications Chennai, 2007

**LIST OF EXPERIMENTS**

**Total: 30 hours**

1. Study about Brick, Stone & Cement. Type, Uses, Structural steel, Timber properties and uses.
2. Study about Water Supply, Distribution System, Water Treatment Plant, Sewerage System
3. Study about basics of Casting processes, Equipment's. To make the model using stepped flange
4. Basics of Metal Arc welding operations, Equipment's, Tools. Butt joint of two metal plates using arc welding process
5. Welding-Lap joint of two metal plates overlapping on one another using arc welding process.
6. Basics of fitting practice, tools and method of producing models, Tools. Step fitting of two metal plates using fitting tools
7. Half Round, Vee fitting of two metal plates using fitting tools
8. Basics of Carpentry operations, Equipment's, Tools. Cross halving joint of two wooden pieces at perpendicular direction
9. To make duster from wooden piece using carpentry tools
10. Basics of Sheet metal operations, Equipment's, Tools and demonstration of producing models, To make geometrical shape like frustum
11. Sheet metal operations. To make geometrical shape like square tray, rectangular tray
12. Sheet metal operations. To make geometrical shape like Cone, Funnel
13. Study the basics of moulding and processes. Equipment's. To make plastic models using injection moulding of simple part
14. Basics of Plumbing practices for G.I and P.V.C., Tools and demonstration of producing models
15. Plumbing of bathroom/ kitchen fittings using G.I fittings, P.V.C fittings

Category	Course Code	Course Name	Hours / Week			C									
			L	T	P										
II	18MB1101L	PROFESSIONAL SKILLS AND PRACTICES	0	0	2	1									
<b>Prerequisite Course (s)</b>															
Nil															
<b>Course Objective (s):</b>															
The purpose of learning this course is to:															
CLR-1	Equip students with different aspects of Presentation														
CLR-2	Train students to use appropriate language for public speaking.														
CLR-3	Help students better understand basic leadership qualities and personality traits														
CLR-4	Train the students to face interview confidently.														
CLR-5	Make students understand how setting goals in life is important.														
<b>Course Outcome (s) (COs):</b>															
At the end of this course, learners will be able to:															
CO1	Make presentation in a formal way.														
CO2	Speak with clarity and confidence, thereby enhancing their employability skills.														
CO3	Enable students to understand different aspects of leadership and evaluate in their own strengths.														
CO4	Clear the job interview successfully.														
CO5	Realize that selecting goal is a fundamental component to long-term success of an individual.

Category	Course Code	Course Name	Hours / Week			C
			L	T	P	
M	18LEM101T	CONSTITUTION OF INDIA	1	0	0	-

**Prerequisite Course (s)**

NIL

**Course Objective (s):**

The purpose of learning this course is to:

- CLR-1 Utilize the citizen's rights
- CLR-2 Utilize the basic citizen's fundamental rights of freedom of speech, expression, equality, religion and privacy
- CLR-3 Identify the Indian constitutional framework with union parliament, government and their functions and citizen's rights
- CLR-4 Utilize the States functionality and provisions for the betterment of the individual and society
- CLR-5 Identify the emergency provisions, the functions of election and public service commissions, identify the tax system

**Course Outcome (s) (COs):**

At the end of this course, learners will be able to:

- CO1 Identify the basic provisions in the Indian constitution
- CO2 List the fundamental rights, rights to equality, freedom, religion, culture, education and the right against exploitation
- CO3 Identify the fundamental duties of the Union of India, President, Vice-President, Union Ministers and Parliament functions
- CO4 Identify the power of states, its legislature, Governors role and the state judiciary
- CO5 List the special provisions and functionality of election commission, public service commission, individual tax and GST

**Course Objective (s)**

The purpose of learning this course is to:

- CLR-1 Develop team spirit and stress management skill
- CLR-2 Demonstrate the interpersonal skills of the learners
- CLR-3 Make learners perform well in interviews
- CLR-4 Enable them to listen well and express their ideas, opinions effectively in official contexts
- CLR-5 Sharpen their reading comprehension skill
- CLR-6 Strengthen their official written communication skill

**Course Outcome (s) (COs):**

At the end of this course, learners will be able to:

- CO1 Adapt in a team under any situation
- CO2 Practice interpersonal relationships in workplace
- CO3 Practice the skills needed for successful interviews
- CO4 Demonstrate and excel in role plays presentations and formal conversations
- CO5 Read and infer the meanings of technical and aesthetic passages
- CO6 Outline official letters, reports, memos, emails, etc.

B	18MAB102T	ADVANCED CALCULUS AND COMPLEX ANALYSIS	3	1	0	4									
<b>Prerequisite Course (s)</b>															
Calculus and Linear Algebra															
<b>Course Objective (s):</b>															
The purpose of learning this course is to:															
1	Evaluate Double and triple Integral and apply them in problems in Engineering Industries														
2	Evaluate Surface, Volume Integral and applications of Gauss theorem, Stoke's and Green's theorem in Engineering fields														
3	To know the properties of Complex functions and apply them in all the Engineering fields														
4	Evaluate improper integrals involving complex functions using Residue theorem and apply them in Engineering fields														
5	Transform engineering problems into ODE, PDE and Integrals and solve them using Laplace / complex analytic methods														
<b>Course Outcome (s) (Cos):</b>															
At the end of this course, learners will be able to:															
CO1	Evaluate multiple integrals using change of variables														
CO2	Apply techniques of vector calculus in problems involving Science and Engineering.														
CO3	Apply complex analytic functions and its properties in solving problems														
CO4	Evaluate improper integrals using Residue theorem involving problems in Science and Engineering														
CO5	Apply techniques of Laplace Transforms and inverse transform for problems in Science and Engineering and Solving Ordinary Differential Equations

<b>UNIT I</b>	<b>MULTIPLE INTEGRALS</b>	<b>9 + 3</b>
Evaluation of double integration in cartesian and polar Coordinates - Evaluation of double integral by changing of order of integration - Area as a double integral (Cartesian and Polar) - Conversion from Cartesian to Polar in double integrals - Triple integration in Cartesian Coordinates - Volume as triple integral in Cartesian, Polar and Spherical Coordinates.		
<b>UNIT II</b>	<b>VECTOR CALCULUS</b>	<b>9 + 3</b>
Gradient, Divergence, Curl, Solenoidal, Irrotational fields - Directional derivative - Line integrals - Surface integrals - Volume Integrals - Green's theorem (excluding proof) : Applications in evaluating Line and Region - Gauss divergence theorem (excluding proof) Applications to cubes and parallelepipeds - Stoke's theorem (excluding proof) : Applications to cubes and parallelepipeds.		
<b>UNIT III</b>	<b>ANALYTIC FUNCTION</b>	<b>9 + 3</b>
Definition of Analytic function - Cauchy Riemann equations- Properties of Analytic function - Determination of Analytic function using Milne's Thomson method- Conformal mapping ( $w=c+z$ , $w=cz$ , $w=\frac{1}{z}$ ) - Bilinear transformation.		
<b>UNIT IV</b>	<b>COMPLEX INTEGRATION</b>	<b>9 + 3</b>
Cauchy's integral theorems (without proof) - Cauchy's integral formulae - Taylor's expansions with simple problems - Laurent's expansions with simple problems - Singularities - Poles and their types - Residues - Cauchy's residue theorem (without proof)- Contour integration: unit circle and semicircle.		
<b>UNIT V</b>	<b>LAPLACE TRANSFORMS</b>	<b>9 + 3</b>
Laplace Transforms of standard functions- Transforms properties- Transform of derivatives and integrals - Initial & Final value theorems (without proof) and Verification for some problems- Inverse laplace transforms using Partial fractions and Shifting theorem- Convolution theorem- Periodic functions- Solution of linear second order ODE equations with constant coefficients.

Course Objective (s):

The purpose of learning this course is to:

- Apply the basic principles of chemistry at both atomic and molecular levels in understanding the concepts related to the engineering field.
- Integrate the chemical principles in their projects undertaken in their respective fields
- Enhance the quality of a materials used in the product from the technological aspects for societal applications

Course Outcome (s) (Cos):

At the end of this course, learners will be able to:

- CO1 Identify the suitable polymeric materials fabrication processes in various application
- CO2 Apply the basic principle of inorganic chemistry at the atomic and molecular levels
- CO3 Apply the various thermodynamic and kinetics concepts to real system
- CO4 Assemble a battery through the understanding of electrochemical principles
- CO5 Categorize the Engineering materials for their applications

3: Substantial (High)

UNIT I	<b>ENGINEERING ORGANIC MATERIALS</b>	9*+3*
<p>Polymer Introduction- classification(based on molecular weight, structure and usage)- types of polymerization(Addition, Condensation and Copolymerisation)-crystallinity, melting point and glass transition temperature-mechanism of polymerization(free radical addition polymerization)-elastomer- structure and curing(vulcanization)- Fabrication and molding of polymers(Injection molding and blow molding)- Engineering plastics - PE, PVC, PMMA, Phenol formaldehyde resin, urea formaldehyde resin( Preparation, properties and uses)- Industrial applications of polymers.</p>		
UNIT II	<b>COORDINATION AND ORGANOMETALLIC COMPOUNDS</b>	9*+3*
<p>Co-ordination compounds – Introduction- nomenclature- types of ligands (mono, di and poly dentate ligands)- isomerism(structural and stereo isomerism) – theories of bonding( Werner and Sidgwick Pouvell theory(EAN rule)) – applications – EDTA titration – Organometallic compounds - synthesis( organo zinc, organo Lithium and Organo magnesium) – Applications ( 18 electron rule, Ziegler Natta Catalyst and Hydroformylation)</p>		
UNIT III	<b>THERMODYNAMICS AND KINETICS</b>	9*+3*
<p>Introduction- first and second law of thermodynamics – Gibbs –Helmholtz equation – Clausius clapeyron equation – Maxwell relations – Vant hoff isotherm and Isochore (problems also)- Kinetics- Introduction- types of reactions(opposing, consecutive and parallel reactions)- chain reactions (HBr and HCl formation)- Applications of kinetics and thermodynamics.</p>		
UNIT IV	<b>ENGINEERING ELECTROCHEMISTRY</b>	9*+3*
<p>Introduction- Conductors and its types - cells ( Electrolytic and Electrochemical cells) – Standard electrode potential- Nemst equation of an electrode- types of electrodes ( SHE and Calomal electrode)- Batteries –Types ( Primary, Secondary, Flow and reserve battery)- Examples ( Lead acid battery, Ni-Cd battery, Lithium battery, Lithium sulphur battery and Hydrogen- Oxygen fuel cells)- Graphene.</p>		
UNIT V	<b>INDUSTRIAL APPLICATIONS OF CHEMISTRY</b>	9*+3*
<p>Cement (Types, manufacture and properties) – Paints ( constitutions and functions )- Lubricants- types- mechanism – properties-abrasives – types –Diamond, Corundum, emery, garnet, quartz, Silicon carbide, carborundum-boron carbide, alundum (preparation, properties and uses ) –applications – Basics of biosensor and biochips.</p>		
<b>LIST OF EXPERIMENTS</b>		<b>30</b>
<ol style="list-style-type: none"> <li>1. Determination of total, permanent and temporary hardness of water sample (EDTA method)</li> <li>2. Determination of alkalinity in water sample- Indicator method</li> <li>3. Determination of chloride content of water sample by Argentometric method(Mohr's method)</li> <li>4. Determination of dissolved oxygen content of water sample by winkler's method</li> <li>5. Conductometric titration of strong acid with strong base</li> </ol>		
<p>Conductometric titration of mixture of acids</p>		

- 7 Determination of strength and amount of Hydrochloric acid- pH metry
- 8 Estimation of strength and amount of ferrous ion by potentiometric method
- 9 Determination of molecular weight of a polymer by viscometry method
- 10 Estimation of ferrous ion by colorimetry.
- 11 Cement analysis

S	18MES101J (R)	ENGINEERING GRAPHICS	2	0	2	3		

Prerequisite Course (s)

Nil

Course Objective (s):

- Construct ellipse, Parabola, hyperbola, cycloid and involutes.
- Sketch the projection of points, straight lines and plane surfaces.
- Sketch the Projection of simple solids like prisms, pyramids, cylinder and cone
- Sketch the sectional solids and developing the lateral surfaces of simple solids
- Understand the three dimensional drawing of simple solid by isometric projection and perspective projection, and convert isometric projection to orthographic projection.

Course Outcome (s) (COs):

- CO1 Construct the ellipse, Parabola, hyperbola, cycloid, and involutes
- CO2 Draw the projection of point, straight line, and plane surface inclined to both reference plane
- CO3 Draw the projection of solid objects prisms, cylinders, pyramids, and cones inclined to one reference plane
- CO4 Develop the lateral surfaces of the sectional solids
- CO5 Build 3D part models using isometric and perspective projection

UNIT I	PLANE CURVES	12
Principles of Engineering Graphics - Lettering - dimensioning - Curves used in engineering practices Conics - Construction of ellipse, Parabola and hyperbola by eccentricity method - Construction of cycloid - construction of involutes - Drawing of tangents and normal to the above curves		
UNIT II	PROJECTION OF POINTS, LINES AND PLANE SURFACES	12
Projection of points and straight lines located in the first quadrant - Determination of true lengths and true inclinations. Projection of polygonal surface and circular lamina inclined to both reference planes.		
UNIT III	PROJECTION OF SOLIDS	12
Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.		
UNIT IV	SECTION OF SOLIDS AND DEVELOPMENT OF SURFACES	12
Sectioning of above solids in simple vertical position by cutting planes inclined to one reference plane and perpendicular to the other - Obtaining true shape of section. Development of lateral surfaces of simple and truncated solids - Prisms, pyramids, cylinders and cones - Development of lateral surfaces of solids with cylindrical cutouts, perpendicular to the axis.		
UNIT V	ISOMETRIC AND PERSPECTIVE PROJECTIONS	12
Principles of isometric projection - isometric scale - isometric projections of simple solids, truncated prisms, pyramids, cylinders and cones. Perspective projection of prisms, pyramids and cylinders by visual ray method. Isometric to orthographic multi-view.

Prerequisite Course (s)

NIL

Course Objective (s): The purpose of learning this course is to:

- 1 Gain the knowledge about D.C and A.C circuits.
- 2 Impart the fundamentals of electrical machines.
- 3 Study the fundamentals of semiconductor devices
- 4 Study the working concepts of measuring instruments.
- 5 Know about digital logic concepts and operational amplifier.

Course Outcome (s) (COs): At the end of this course, learners will be able to:

- CO1 Apply the concepts of ohm's law and Kirchoff's law in DC and AC circuits
- CO2 Explain the basic concepts of DC motor, DC generator, Transformer and Induction motor.
- CO3 Summarize the nature of semiconductor devices.
- CO4 Interpret the concept of measuring devices like PMMC, MI, energy meter and wattmeter.
- CO5 Infer the concept of electronics devices and conversion techniques

DATE 15/10/2020

BOS-9

SEU - unit 1 title may be solar radiation and measurements  
PQ - TSS standards to be included in unit 2, 3 and 4.

### Open electives.

JOT - No change

FSM - Interchange the unit 3 & unit 4

Robotics - No change.

ESD & FC - No change.

EV - Course name may be changed as fundamentals of electric vehicles

JOT and ESD & FC subjects can be included in professional electives for EEE students with different name.

BEEE - The subject content in all the 5 units are revised based on the feedback from the stock holders  
One credit course - Board is accepted to conduct three one credit courses from 5th Semester onwards for this 2018 regulation

BTech (CSBS) - Principles of electrical engineering course content also discussed and verified.

### PGI 2019 regulation.

Power System Protection Course may be added as elective course in third semester

electronics

Analog and digital electronics subject codes are revised

  
15/10/2020

UNIT I	<b>ELECTRICAL CIRCUITS</b>	9
<p>Electrical quantities: Resistors, Inductors, Capacitors - Ohm's Law - Kirchoff's Laws -Series and Parallel circuits - Analysis of DC circuits: Mesh &amp; Nodal analysis, Thevenin's Theorem, Norton's Theorem &amp; Maximum Power Transfer Theorem, Star delta Transformation, RL &amp; RC Transient Analysis. <b>Introduction to AC Circuits: Waveforms and RMS Value – Power and Power factor- Introduction to three phase systems – Types of connections, Relationship between line and phase values.</b></p>		
UNIT II	<b>ELECTRICAL MACHINES</b>	9
<p>Faraday's laws- Construction, Principle of Operation, Basic Equations of DC Generators, DC Motors – Two Point &amp; Three Point Starter – Construction, Working and EMF Equation of Single Phase Transformer – Construction and Working of AC Generator – Three Phase Induction Motor: Construction and Working of Squirrel Cage and Slip Ring Induction Motor – Single Phase Induction Motor ( Split Phase, Capacitor Start Induction Motor).</p>		
UNIT III	<b>ELECTRONIC DEVICES</b>	9
<p>Intrinsic and Extrinsic Semiconductors – PN junction diode , Zener diode and its Characteristics – <b>Operation of Half Wave, Full Wave and Bridge Type Rectifiers</b> – Bipolar Junction Transistor: Configurations and Characteristics of CB, CE, CC – Construction and Operation of JFET, MOSFET.</p>		
UNIT IV	<b>MEASUREMENTS</b>	9
<p>Basic Principles and Classification of Instruments – Construction and Working of PMMC, MI Instruments (Attraction &amp; Repulsion type) – Principle of Operation of Dynamometer Type Wattmeter, Induction Type Energy Meter – Instrument transformer – CRO – Megger.</p>		
UNIT V	<b>DIGITAL &amp; INTEGRATED CIRCUITS</b>	9
<p>Number Systems – Boolean Theorems– Logic Gates – Half Adder and Full Adder Circuit – Flip-Flops: RS, JK, T and D – A/D Converter (Successive Approximation Type) – D/A Converter (Binary Weighted Type) – Op-Amp : <del>Functional Block</del> and Types (Inverting , Non-Inverting &amp; Differential Amplifier).</p>		

LIST OF EXPERIMENTS		15
<ol style="list-style-type: none"> <li>1. Verification of Ohm's &amp; Kirchoff's Laws</li> <li>2. Types of Wiring (Fluorescent Lamp &amp; Staircase)</li> <li>3. <b>Prerequisite Course (s)</b>															
Nil															
<b>Course Objective (s):</b>															
The purpose of learning this course is to:															
1	Analyze given electric circuits consisting of active and passive components.														
2	Identify the parts, functions and working of motors, generators and transformers that function in AC and DC.														
3	Utilize the basic electronic devices and circuits.														
4	Utilize the working concept of measuring instruments.														
5	Build simple logical circuits using Boolean expressions. Identify elements in Integrated circuit.														
<b>Course Outcome (s) (COs):</b>															
At the end of this course, learners will be able to:															
CO1	Discuss basic theory utilized in electrical circuits and its circuits.														
CO2	Describing working principle of direct current and alternative current machines such as transformers, motors and generators.														
CO3	Operate the basic electronic devices. Identify their uses and construction features.														
CO4	Interpret the concept of measuring devices like PMMC, MI, energy and wattmeter.														
CO5	Apply binary logic and Boolean expressions for digital circuit design. Identify elements in a Integrated circuit.

2018 Regulation

<b>UNIT I</b>	<b>ELECTRICAL CIRCUITS</b>	<b>12</b>
Introduction to DC and AC circuits, Active and Passive two terminal elements, Ohms law, Voltage-Current relation, Power, Energy, R,L,C Circuits, Voltage and Current Sources, Kirchoff's current law, Kirchoff's voltage law, Problem Solving Session, Mesh Current Analysis, Nodal Voltage Analysis, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem, Star- Delta Transformation, Problem Solving Session, Resistive Circuit Analysis, Superposition, Convolution, RL Circuit Transient Analysis, RC & RLC Transient Analysis, Three Phase Systems, Star and delta Connections, Relation between Line and, Phase, Problem Solving Session.		
<b>UNIT II</b>	<b>DC MACHINES &amp; AC MACHINES</b>	<b>12</b>
Sinusoids, Generation of AC, Average, RMS values, Form and peak factors, Analysis of single phase AC circuit, Real, Reactive, Apparent power, Power factor, Magnetic materials, B-H Characteristics Simple magnetic circuits, Faraday's laws, induced emf and inductances. 1 - Phase transformers: Construction, types, Ideal, practical transformer, EMF equation, Regulation, Efficiency, Problem Solving Session, Construction, working of DC Generators, Types of DC generators, Characteristics of Generators, Applications of DC generator, Working and types of DC motors, Characteristics, Two point starter and Three point starter, Problem Solving Session, AC generators (Alternators), Construction, working, Characteristics of Alternators, Losses, Single Phase motors: Split phase Induction motor & Capacitor start Induction motor, Working and types of single phase AC motors, Squirrel Cage and Slip ring Induction motor, Types of AC starters (Autotransformer, star-delta and Rotor resistance starter), Problem Solving Session.		
<b>UNIT III</b>	<b>ELECTRONIC DEVICES</b>	<b>12</b>
Overview of semiconductors, Intrinsic and Extrinsic semiconductors, Operation of PN Junction diode, Characteristics of PN Diode, Operation of Zener diode, Characteristics of Zener Diode, Overview of diode circuits, Operation of Half-wave rectifier, Half wave: Ripple factor Expression, Advantages, Disadvantages, Operation of Full-wave rectifier, Full wave: Ripple factor Expression, Advantages, Disadvantages, Bridge type rectifier operation, Comparison of rectifier circuits, Overview of filters and its uses, BJT construction, operation, BJT characteristics (CB, CE and CC configurations) and uses, JFET construction, operation, JFET characteristics (Drain and Transfer characteristics), Depletion mode and Enhancement mode MOSFET construction operation, MOSFET characteristics (Transfer and output characteristics), Problem Solving Session.		
<b>UNIT IV</b>	<b>MEASUREMENTS</b>	<b>12</b>
Methods of measurements – Overview, Types of Measurements: Primary, Secondary, Tertiary, Basic principles and Classification of Instruments- Indicating, Recording and Integrating, Construction and working of PMMC, PMMC-Torque Equation, Advantages, Disadvantages, Construction and working of MI Instruments, MI (Attraction type)- Operation, MI Attraction type-Advantages, Disadvantages, MI (Repulsion type)- Operation, Torque Equation, MI (Repulsion type)- Errors, Advantages, Disadvantages, Overview of Instrument Transformers, Current Transformer, Potential Transformer, CRO, CRT, Operation of Dynamometer type watt meter, Advantages and Disadvantages, Operation of Induction type watt meter, Advantages and Disadvantages, Megger –Construction, Working, Measurement of Earth resistance		
<b>UNIT V</b>	<b>DIGITAL AND INTEGRATED DEVICES</b>	<b>12</b>
Number systems, binary codes, Binary arithmetic, Boolean algebra, laws and theorems, Simplification of Boolean expression, Logic Gates and Operations, Simplification of Boolean expression, Problem Solving Session, SOP and POS Expressions, Standard forms of Boolean expression, Simplify using Boolean Expressions, Minterm and Maxterm, K-Map Simple Reduction Technique, Two, Three and Four Variable K-Map, Problem Solving Session, Half adder circuit, Full adder circuit, Flip-flops: RS, JK, T and D Flip-flops, A/D Converter-Successive Approximation, D/A Converter-Binary Weighted, Overview of Op-Amp, Op-Amp: Functional block & Types (Inverting, Non-inverting & differential amplifier).		
<b>LIST OF EXPERIMENTS</b>		<b>30</b>
<ol style="list-style-type: none"> <li>1. Verification of Kirchoff's Law</li> <li>2. Verification of all Theorems,</li> <li>3. Time Domain Analysis (RL, RC).</li> </ol>		

<ol style="list-style-type: none"> <li>4. Types of wiring (Fluorescent lamp, Staircase, godown wiring).</li> <li>5. Demo of DC Machine &amp; Parts</li> <li>6. Demo of AC Machine &amp; Parts.</li> <li>7. Characteristics of semiconductors</li> <li>8. Measurement of Ripple factor (Half-wave and Full-wave).</li> <li>9. Characteristics of CB and CL configurations</li> <li>10. Demo of PMMC and MI Meters.</li> <li>11. Waveform verification using CRO.</li> <li>12. Measurement of Energy using Single phase Energy meter.</li> <li>13. Verification of Boolean expression using logic gates.</li> <li>14. Reduction using Digital Logic Gates.</li> <li>15. **Prerequisite Course (s)**

Nil

**Course Objective (s):**

The purpose of learning this course is to:

- CLR1 Recapitulate fundamental mathematical concepts and skills
- CLR2 Hone critical thinking skills by analyzing the arguments with explicit and implicit premises
- CLR3 Sharpen logical reasoning through skillful conceptualization
- CLR4 Identify the relationships between words based on their function, usage and characteristics
- CLR5 Nurture passion for enriching vocabulary
- CLR6 Acquire the right knowledge, skill and aptitude to face any competitive examination.

**Course Outcome (s) (COs):**

At the end of this course, learners will be able to:

- CO1 Build a strong base in the fundamental mathematical concepts
- CO2 Identify the approaches and strategies to solve problems with speed and accuracy
- CO3 Gain appropriate skills to succeed in preliminary selection process for recruitment
- CO4 Collectively solve problems in teams and groups
- CO5 Build vocabulary through methodical approaches
- CO6 Enhance lexical skills through systematic application of concepts and careful analysis of style, syntax, semantics and logic

M	18LEM102T	VALUE EDUCATION	1	0	0	-

**Prerequisite Course (s)**

NIL

**Course Objective (s):**

The purpose of learning this course is to:

- CLR-1 Connect the learners to their potential, identify their potential to create a new positive world
- CLR-2 Analyze the merits and demerits of different educational systems. Identify the different systems of education
- CLR-3 Draw attention towards the weaknesses they are susceptible to and inspire them through positive models
- CLR-4 Instill a sense of professional ethics which help them develop a safe comfortable and prosperous society
- CLR-5 Cultivate a spirit of willing accommodation in an increasingly diverse world

**Course Outcome (s) (COs):**

At the end of this course, learners will be able to:

- CO1 Equipped with an awareness of their positive energy and power
- CO2 Identify the meaning of 'education'; have a clearer and better understanding in taking education to the masses
- CO3 Assess their weaknesses; understand risks involved and rectify them through learning from positive and negative instances
- CO4 Realize their professional responsibilities
- CO5 Acquire the required values in an expanding pluralistic world not be swept off their feet due to the rapid changes

UNIT I	VISIONS FOR YOUTH	6
Introduction (Quiz) - Two speeches by great personalities (Oral presentations) - Quotes, proverbs relating to the power and potential of youth, Excerpts: Wings of Fire (Collecting proverbs highlighting the potential of youth) - Two news articles highlighting the initiatives for social causes by youth (Role play in a similar context) - One song exhibiting the positive energy of youth (Discussion on the song)		
UNIT II	YOUTH AND EDUCATION	6
Meaning and the significance of education (Brainstorming) - Overview of different (traditional, modern) educational systems (Debate) - Role of youth in education, Urban and Rural set up, dissemination (Student presentations) - Designing and framing educational curriculum and materials (Students' Presentation based on write ups) -The pressing challenges in current educational system (Collage Design)		
UNIT III	YOUTH AND SOCIETY	6
Need for social values in the present context (Poem - "Where the mind is without fear" , Write up on various instances from real life) - Individual and group behaviour, respect for others (Case study on recent happenings) - Civic sense, bullying-substance abuse, uses of expletives (Case study on recent happenings) - Hero worship, gender insensitivity moral policing (Case study on recent happenings) - Positive contribution by youth in promoting social welfare ( Short videos followed by discussions)		
UNIT IV	YOUTH AS PROFESSIONALS	6
Introduction to professional values (Brainstorming through visual cues) - Engineering societies in India (Quiz) - Challenges to be addressed by Engineers in India (Case Study) - Challenges in different sectors: agriculture (Case Study) - Challenges in different sectors: urban development, environment (Group activity (oral and written)) - Challenges in different sectors: sustainable development, cyber security (Case Study - from Newspapers)		
UNIT V	YOUTH IN PLURALISTIC SOCIETY	6
Introduction to pluralistic society, forces of globalization (Group Discussion) - Science and technology intercultural proximity (Narration of stories from various religions to illustrate the oneness of humanity) - Positive, Negative impact: religion, politics, gender, economic status, aesthetics (Discussion on "To Kill a Mocking Bird") - Values required to live in a global society (Poster presentation on festivals of various religions) - Learning the etiquettes of various societies (Poster presentation on festivals of various religions) - Success of pluralistic society, enliven the society, religious harmony through literary (Writing the aspects of pluralistic society based on the text).

			L	T	P	C	
B	18MA11202T	PARTIAL DIFFERENTIAL EQUATIONS AND LINEAR ALGEBRA (B.E. E.C.T)	3	1	0	4	

Prerequisite Course (s)

NIL.

Course Objective (s):

The purpose of learning this course is to:

- 1 Introduce the Fourier series and its applications to the solution of partial differential equations.
- 2 Understand how to solve linear partial differential equations using different methods.
- 3 Give an integrated approach to number theory and abstract algebra, and provide a firm basis for further reading and study in the subject.
- 4 Introduce the basic notions of groups, rings, fields which will then be used to solve related problems.
- 5 Provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems in communication engineering.

Course Outcome (s) (COs):

At the end of this course, learners will be able to:

- CO1 Familiarize the students with the concept of Fourier series.
- CO2 Apply partial derivative equation techniques to predict the behaviour of certain phenomena.
- CO3 Solve various types of partial differential equations and apply the acquired knowledge in signals and Systems, Digital Signal Processing, etc.
- CO4 Explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- CO5 Understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomena.

<b>UNIT I</b>	<b>FOURIER SERIES</b>	<b>9 + 3</b>
Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Parseval's identity – Harmonic Analysis.		
<b>UNIT II</b>	<b>PARTIAL DIFFERENTIAL EQUATIONS</b>	<b>9 + 3</b>
Formation of partial differential equations – Lagrange's linear equation – Solutions of standard types of first order partial differential equations - Linear partial differential equations of second order with constant coefficients.		
<b>UNIT III</b>	<b>BOUNDARY VALUE PROBLEMS</b>	<b>9 + 3</b>
Classification of second order partial differential equations-Solutions of one dimensional wave equation – One dimensional equation of heat conduction –Solution of two dimensional heat Equation in cartesian coordinates.		
<b>UNIT IV</b>	<b>VECTOR AND LINEAR SPACE</b>	<b>9 + 3</b>
Introduction to vector space and sub space - linear independent and dependent - spanning set - basis and dimension - row space and column space.		
<b>UNIT V</b>	<b>BASICS OF PROBABILITY AND RANDOM VARIABLE</b>	<b>9 + 3</b>
Sample spaces and events – counting – probability - the axioms of probability - some elementary theorems - conditional probability - total probability - Baye's theorem (only statement) - Random variable - Probability mass function - Probability density functions- Properties.

<b>Prerequisite Course (s)</b>														
Basic Electrical and Electronics Engineering														
<b>Course Objective (s):</b> The purpose of learning this course is to														
1.	Simplify Boolean expressions using basic postulates of Boolean algebra.													
2.	Synthesize the basic combinational circuits													
3.	Synthesize the basic Sequential circuits													
4.	Synthesize combinational and sequential logic using programmable logic devices.													
5.	Synthesize the synchronous & asynchronous sequential circuits.													
<b>Course Outcome (s) (COs):</b> At end of this course, the learners should be able to														
CO1	Solve the Boolean expression using basic postulates of Boolean algebra, K-map and Quine Mccluskey method. (K3)													
CO2	Analyze the combinational circuits using logic gates. (K4)													
CO3	Examine the sequential circuits using logic gates and flip flops (K4)													
CO4	Make use of programmable logic device to implement combinational and sequential logic circuit. (K3)													
CO5	Construct the synchronous and asynchronous sequential circuit using logic gates and flip flops. (K3)

96

UNIT I	MINIMIZATION TECHNIQUES	9
Minimization Technique: Boolean postulates and laws –De–Morgan’s Theorem –Minimization of Boolean expressions using Boolean laws and theorem –Standard Form, Canonical Form, –Sum of Products (SOP) –Product of Sums (POS) – Don’t care conditions –Minimization of Boolean expressions up to 4 variables using Karnaugh map and Quine Mc Cluskey method.		
UNIT II	COMBINATIONAL CIRCUITS	9
Design procedure: Half adder / subtractor –Full Adder / subtractor –Parallel binary adder/Subtractor –Carry Look Ahead adder –BCD adder–Multiplexer/ Demultiplexer–Decoder –Encoder–Parity generators –Parity checker –Code converters(BCD to Excess3 , BCD to Gray) –Magnitude Comparator.		
UNIT III	SEQUENTIAL CIRCUITS	9
Latches, Flip flops –SR, D,JK, T and Master –Slave –Characteristic table and Equation –Application table –Edge and level Triggering –Realization of one flip flop using other flip flops –Serial Adder/Subtractor –Asynchronous Ripple counter –Synchronous counters (Up/Down counters)–Design of Synchronous counters –modulo n counter –Ring counter –Shift registers –Universal shift registers.		
UNIT IV	MEMORY DEVICES AND PROGRAMMABLE LOGIC DEVICES	9
Classification of memories –ROM, PROM, EPROM, EEPROM, EAPROM, RAM–Static RAM Cell–Dynamic RAM cell, Programmable Logic Devices –Programmable Logic Array (PLA) –Programmable Array Logic (PAL)–Field Programmable Gate Arrays (FPGA) –Implementation of combinational logic circuits using ROM, PLA, PAL		
UNIT V	SYNCHRONOUS AND ASYNCHRONOUS SEQUENTIAL CIRCUITS	9
Synchronous Sequential Circuits: General Model –Classification –Analysis of Synchronous Sequential Circuits - Asynchronous Sequential Circuits: Design of fundamental mode circuits –races and hazards –Design of Hazard Free Switching circuits –Preface to VHDL programming Design of Combinational circuits using VHDL.		
LIST OF EXPERIMENTS		15
1. Verification of Boolean theorems using digital logic gates. 2. Design and implementation of code converters for BCD to Excess-3 conversion and Excess-3 to Conversion 3. Design and implementation of 4-bit binary adder / subtractor using basic gates and MS devices. 4. Design and implementation of 2-bit and 8-bit magnitude comparator using MS devices. 5. Design and implementation of multiplexers and demultiplexers. 6. Design and testing of flip-flops using gates. 7. Implementation of SISO, SIPO, PISO and PIPO shift registers using flip-flops		

8. Implementation of any combinational circuit design using FPGA	
9. Write VHDL coding for Combinational Circuits

<b>UNIT I</b>	<b>INTRODUCTION TO COORDINATE SYSTEM</b>	<b>9</b>
Definition of scalar, vector, dot and cross product- Problems in Curl, Divergence and Gradient - Introduction to Co-ordinate System-Rectangular-Cylindrical and spherical Coordinate system-Problems in Stokes theorem and Divergence theorem. Types of Integrals, Coulomb's Law in Vector Form Principle of Superposition theorem.		
<b>UNIT II</b>	<b>STATIC ELECTRIC FIELD</b>	<b>9</b>
Definition of Electric field Intensity-Electric field due to continuous charge distribution: Electric Field due to charges distributed uniformly on an infinite and finite line-Electric Field on the axis of a uniformly charged circular disc. Electric Scalar Potential and Electric Flux Density -Relationship between potential and electric field -Potential due to infinite uniformly charged line - Potential due to electrical dipole -Gauss Law -proof of Gauss Law -Applications.		
<b>UNIT III</b>	<b>STATIC MAGNETIC FIELD</b>	<b>9</b>
Introduction to magnetic fields and its properties -The Biot-Savart Law in vector form -Magnetic Field intensity due to a finite and infinite wire carrying a current I -Magnetic field intensity on the axis of a circular loop carrying a current I -Ampere's circuital law - Proof of Ampere's circuital law- Applications. The Lorentz force equation for a moving charge - Definition of: Torque -Magnetic moment -Magnetic scalar potential- Magnetic Vector Potential		
<b>UNIT IV</b>	<b>ELECTRIC AND MAGNETIC FIELDS IN MATERIALS</b>	<b>9</b>
Nature of dielectric materials-Electric Polarization-Boundary conditions for electric fields-Definition of Capacitance-Poisson's and Laplace's equation-Capacitance of Coaxial capacitor using Laplace's equation-Electrostatic energy and energy density-Electric current -Current density-point form of ohm's law-continuity equation for current. Nature of magnetic materials -magnetization and permeability -magnetic boundary conditions-Definition of Inductance -Inductance of loops and solenoids -Definition of Mutual inductance. Energy density in magnetic fields		
<b>UNIT V</b>	<b>ELECTROMAGNETIC WAVES USING MAXWELL EQUATIONS</b>	<b>9</b>
Maxwell's equation derived from Ampere's circuital law, Faraday's law, Electric and Magnetic Gauss's law. Definition of Poynting vector. Linear, Elliptical and circular polarization -normal incidence.

Basic Electrical and Electronics Engineering

**Course Objective (s):** The purpose of learning this course is to

- Understand the Special semiconductor devices and Working methods of biasing of transistors.
- Know technique for Midband analysis of amplifier circuits using small signal equivalent circuit.
- Acquire knowledge on the method of calculating cutoff frequencies and to determine bandwidth.
- Understand the high frequency analysis of amplifier circuits.
- Study the design of power amplifiers and its characteristics.

**Course Outcome (s) (COs):** At end of this course, the learners should be able to

- CO1 Identify the stability factors of various biasing techniques used in BJT and FET. (K3)
- CO2 Solve the hybrid parameter model for different amplifiers. (K3)
- CO3 Utilize the high frequency analysis of single and multi-stage amplifiers. (K3)
- CO4 Analyze the hybrid- $\pi$  model in high frequency amplifiers. (K3)
- CO5 Experiment with the performance of different classes in large signal amplifiers. (K3)

UNIT I	TRANSISTOR BIAS STABILITY	9
<b>BJT:</b> Biasing, Q-Point, Variation of Q-Point, Stability factor. <b>Bias stability Concepts:</b> Fixed bias & collector to base bias of BJT - Voltage Divider bias of BJT - Source or self-bias of FET amplifier. <b>Bias Compensation:</b> Diode compensation - Thermistor & Sensistor compensation.		
UNIT II	MIDBAND ANALYSIS OF SMALL SIGNAL AMPLIFIERS	9
Analysis of a Transistor amplifier using h-parameter model - Comparison of Transistor Amplifier Configurations - Simplified Calculation of CE model - Simplified Calculation of CB model - Small signal model of FET Amplifier: CS, CD - Comparison of BJT and FET model - Methods of increasing input impedance: Bootstrapping circuit - Darlington Circuit.		
UNIT III	FREQUENCY RESPONSE OF AMPLIFIERS	9
<b>Differential amplifier:</b> Introduction - Emitter coupled differential amplifier circuit - Bisection theorem - Differential gain - CMRR - Use of constant current circuit to improve CMRR. Multistage amplifier: Different coupling schemes - Need for cascading - General expression for frequency response of multistage amplifiers - Calculation of overall upper and lower cutoff frequencies of multistage amplifiers - Amplifier rise time and sag and their relation to cutoff frequencies.		
UNIT IV	HIGH FREQUENCY ANALYSIS OF AMPLIFIERS	9
General shape of frequency response of amplifiers - Effect of emitter bypass capacitor on low frequency response - Hybrid pi CE Transistor model - CE Short circuit Current gain obtained with the hybrid pi model - Current gain with resistive load - Emitter follower at High Frequencies - CS, CD amplifiers at High Frequencies - Gain Bandwidth Product.		
UNIT V	LARGE SIGNAL AMPLIFIERS	9
<b>Classification of Large signal amplifiers:</b> Series fed Class A amplifier - Transformer-coupled Class A amplifier - Efficiency of Class A amplifiers - Second harmonic distortion, higher order harmonic distortion - Class B amplifier efficiency - push-pull amplifier - complementary-symmetry amplifier - Class AB Amplifier - Class C power Amplifier - MOSFET power amplifier - Thermal stability and heat sink - Distortions in power amplifier.		
LIST OF EXPERIMENTS		15
1. Design and construct Fixed Bias amplifier circuit using BJT 2. Design and construct BJT Common Emitter Amplifier using voltage divider bias(self-bias) 3. Darlington Amplifier using BJT 4. Source follower with Bootstrapped gate resistance 5. Differential amplifier using BJT 6. Common Source Amplifier 7. Common Drain Amplifier 8. Class A Power Amplifier 9. Class B Complementary Symmetry Power amplifier 10. Class C tuned Amplifier

UNIT I	BASICS OF MEASUREMENTS AND INSTRUMENTS	9
Functional elements of an instrument – static and dynamic characteristics - errors in measurements – statistical evaluation of measurement data - direct and indirect measurement methods - classification of instruments – standards and calibration.		
UNIT II	ANALOG METERS	9
Analog ammeters and voltmeters: Permanent Magnet Moving Coil instrument (PMMC), Moving Iron instruments, electro dynamic instruments - Instrument transformer: current transformer, potential transformer – measurement of power – Electro dynamo meter type – frequency meters – synchroscope.		
UNIT III	DIGITAL METERS AND STORAGE, DISPLAY DEVICES	9
Digital voltmeters - digital frequency meter – printers and plotters - cathode ray oscilloscopes – CRT circuits and screens - electrostatic deflection - digital storage oscilloscope - digital LED, LCD and dot matrix display.		
UNIT IV	BRIDGES	9
Measurement of resistance – Wheatstone bridge, Kelvin's bridge - Measurement of self-inductance – Maxwell, Hay's, Owen's bridges – measurement of capacitance – Schering bridge - Frequency measurement using wien bridge.		
UNIT V	TRANSDUCERS	9
Classification of transducers – selection of transducers – resistive transducers – strain gauge, bounded, unbounded and semiconductor gauges, resistance thermo meters, thermistors - inductive transducers – LVDT, RVDT- capacitive transducers – piezoelectric transducers - digital transducers.

Category	Course Code	Course Name	Hours / Week			C								
			L	T	P									
C	18ECC204T	NETWORK ANALYSIS AND SYNTHESIS	3	0	0	3								
<b>Prerequisite Course (s)</b>														
Basic Electrical and Electronics Engineering														
<b>Course Objective (s):</b> The purpose of learning this course is to														
1	Understand the basic knowledge in the analysis of transient circuits													
2	Learn about network topology, filters and elements of network synthesis													
<b>Course Outcome (s) (COs):</b> At end of this course, the learners should be able to														
CO1	Organize the transient response of circuits (K3)													
CO2	Apply various network topologies (K3)													
CO3	Solve one port and two port networks (K3)													
CO4	Analyze different types of filters (K4)													
CO5	Solve the RL, RC and LC networks (K3)													
<b>CO-PO Mapping</b>

1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

UNIT I	CIRCUIT TRANSIENT ANALYSIS	9
Transient Response of RL & RC series dc circuits using Laplace Transform - Transient Response of RLC series dc circuits using Laplace Transform method - Network Functions -Driving Point Functions and Transfer Functions- Poles and Zero's (Driving Point & Transfer Functions) - Graphical method for determination of Residue.		
UNIT II	NETWORK TOPOLOGY	9
Introduction - Graph of a network - trees, co trees and loops - Incidence matrix - Loop matrix - Cut set matrix -KVL - KCL - Network equilibrium equations		
UNIT III	ONE PORT AND TWO PORT NETWORKS	9
Driving point impedance and admittance of one port networks - Z parameters - Y parameters – ABCD parameters - h parameters - Inter relationship between parameters.		
UNIT IV	FILTERS	9
Characteristics of filters – Constant k Low pass filter – Constant k High pass filter – m Derived Low pass filter – m Derived High pass filter.		
UNIT V	ELEMENTS OF NETWORK SYNTHESIS	9
Introduction - Hurwitz polynomials -PR functions - Necessary and sufficient conditions of PR function – Synthesis of RL, RC and LC functions (Cauer and Foster forms)

UNIT I	ENVIRONMENT & BIODIVERSITY	3
Definition-types of environment, components of environment, scope-importance of environmental studies- Bio diversity-definition-value of biodiversity-Threats to biodiversity - India a mega diversity nation-endangered and endemic species of India-conservation of biodiversity.		
UNIT II	ENERGY SOURCES	3
Energy resources- Growing energy needs- Renewable and Nonrenewable energy sources- Use of alternate energy sources - Nuclear Energy- Alternative energy fuels-power alcohol-Bio diesel (preparation, properties & uses)		
UNIT III	SOCIAL ISSUES AND ENVIRONMENT	3
Environment ethics - Climate change - Global warming - Acid rain - Ozone layer depletion -Nuclear accidents-holocaust. Solid waste management - Rain water Harvesting-watershed management-		
UNIT IV	ENVIRONMENTAL POLLUTION & ACTs	3
Source, types, effects & control- Air pollution -Water pollution - Soil pollution - Marine pollution and Plastic Pollution -The Environment (Protection) Act - Air (Prevention and control of pollution) Act - Water (Prevention and control of pollution) Act- Role of individual in prevention of pollution.		
UNIT V	HUMAN POPULATION AND ENVIRONMENT	3
Sustainable development - Urban Population growth and distribution - Population explosion - Family Welfare Program -Women and child welfare- Role of information technology in environment and human health- case studies

Category	Course Code	Course Name	Hours / Week			C
			L	T	P	
B	18MAB205T	PROBABILITY THEORY AND RANDOM PROCESSES (B.E ECE)	3	1	0	4

**Prerequisite Course (s)**

NIL

**Course Objective (s):**

The purpose of learning this course is to:

- 1 Study random variables and random processes as they apply in engineering disciplines.
- 2 Develop an understanding of discrete and continuous random variables and how they can be used to model and analyze systems.
- 3 Study probability density functions and cumulative distribution functions, and how they can be used to characterize engineering systems.
- 4 Understand test of hypothesis and how they relate to engineering applications and spectral densities.

**Course Outcome (s) (COs):**

At the end of this course, learners will be able to:

- CO1 Identify and Analyze the given data by using standard distributions.
- CO2 Illustrate and apply the concept of pairs of random variables from the knowledge of sampling distributions.
- CO3 Learners will understand the problems of Students T test for single mean and difference of means.
- CO4 Study random processes, auto correlation and cross correlation applicable in the field of electronics and communication engineering.
- CO5 Understand and analyze the problems associated with engineering applications.

**CO-PO Mapping**

2: Moderate (Medium)

3: Substantial (High)

<b>UNIT I</b>	<b>RANDOM VARIABLE AND STANDARD DISTRIBUTIONS</b>	<b>9+3</b>
Random variable - Moments - Moment generating functions and their properties- Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions and their properties.		
<b>UNIT II</b>	<b>TWO DIMENSIONAL RANDOM VARIABLES</b>	<b>9+3</b>
Joint distributions - Marginal and conditional distributions - Covariance - Correlation and regression - Transformation of random variables - Central limit theorem.		
<b>UNIT III</b>	<b>TESTING OF HYPOTHESIS</b>	<b>9+3</b>
Sampling distributions - Tests for single mean, Proportion, Difference of means (large and small samples) - Tests for single variance and equality of variances - Chi-square test for goodness of fit - Independence of attributes.		
<b>UNIT IV</b>	<b>CLASSIFICATION OF RANDOM PROCESSES</b>	<b>9+3</b>
Definition and examples - first order, second order, strictly stationary, wide - sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.		
<b>UNIT V</b>	<b>CORRELATION AND SPECTRAL DENSITIES</b>	<b>9+3</b>
Auto correlation - Cross correlation - Properties - Power spectral density - Cross spectral density - Properties - Wiener-Khinchine relation - Relationship between cross power spectrum and cross correlation function - Linear time invariant system - System transfer function -Linear systems with random inputs - Auto correlation and Cross correlation functions of input and output.

			L	T	P	
S	18ITS201J	Data Structures and Object Oriented Programming	3	0	2	4

**Prerequisite Course (s)**

Programming for problem solving

**Course Objective (s):**

The purpose of learning this course is to:

1	Understand the basics of various Abstract Data Types with its operations.
2	Understand the data structures and algorithms for trees and graphs.
3	Explain about sorting algorithm, implementation and design of algorithms.
4	Summarize the basics of OOPs, declaration and definition of classes and objects.
5	Illustrate the concept of Inheritance, Polymorphism and Exceptions.

**Course Outcome (s) (COs):**

At the end of this course, learners will be able to:

CO1	Describe various operation on the Abstract Data types
CO2	Discuss about the various operations performed in tree and graph data structures
CO3	Explain about various sorting methods and algorithm design techniques
CO4	Understand the concept of basics of OOPs , classes and objects
CO5	Explain inheritance, polymorphism and handling of exceptions

C	18ECC206T	TRANSMISSION LINES AND WAVEGUIDES	3	1	0	4

**Prerequisite Course (s)**

Electromagnetic Fields

**Course Objective (s):**The purpose of learning this course is to:

1	Introduce the various types of transmission lines and its characteristics
2	Impart technical knowledge in impedance matching using smith chart
3	Analyze the characteristics of TE, TM, TEM of parallel Planes
4	Design and analyze waveguides to meet with different frequency
5	Understand the concepts of cavities.

**Course Outcome (s) (COs):**At the end of this course, learners will be able to:

CO1	Examine the different types of Transmission Lines (K4)
CO2	Solve the Impedance Matching parameters using smith chart (K4)
CO3	Make use of the Maxwell equation concepts between two parallel planes (K3)
CO4	Analyze the rectangular waveguide to meet the frequency requirements (K4)
CO5	Apply the Bessel Functions in Circular Waveguide (K3)

3: Substantial (High)

<b>UNIT I</b>	<b>TRANSMISSION LINE THEORY</b>	<b>12</b>
<p>The transmission line - general solution –Characteristic Impedance-The infinite line - Wavelength, velocity of propagation - Waveform distortion - the distortion-less line –Inductance loading of telephone cables–Reflection on a line not terminated in <math>Z_0</math> - Reflection coefficient - calculation of current, voltage, power delivered and efficiency of transmission - Input and transfer impedance - Open and short circuited lines - reflection factor and reflection loss.</p>		
<b>UNIT II</b>	<b>HIGH FREQUENCY TRANSMISSION LINES</b>	<b>12</b>
<p>Standing Waves, Nodes, Standing Wave Ratio - Input impedance of the dissipation less line –Input Impedance of open and short-circuited lines - Impedance matching - The eighth wave line – The quarter wave line – the half wave line - The Smith Chart – Application of the Smith Chart– single stub matching and double stub matching- Solutions of problems using Smith chart</p>		
<b>UNIT III</b>	<b>GUIDED WAVES BETWEEN PARALLEL PLANES</b>	<b>12</b>
<p>Waves between parallel planes of perfect conductors – Transverse electric waves - Transverse magnetic waves – Characteristics of TE and TM Waves – Transverse Electromagnetic waves – Velocities of propagation – Attenuation of TE and TM waves in parallel planes – Wave impedances.</p>		
<b>UNIT IV</b>	<b>RECTANGULAR WAVEGUIDES</b>	<b>12</b>
<p>Transverse Magnetic Waves in Rectangular Wave guides – Transverse Electric Waves in Rectangular Waveguides – characteristic of TE and TM Waves – Cutoff wavelength and phase velocity – Impossibility of TEM waves in waveguides – Dominant mode in rectangular waveguide – Attenuation of TE and TM modes in rectangular waveguides – Wave impedances– Excitation of modes</p>		
<b>UNIT V</b>	<b>CIRCULAR WAVE GUIDES AND RESONATORS</b>	<b>12</b>
<p>Bessel functions – Solution of field equations in cylindrical co-ordinates – TM and TE waves in circular waveguides – wave impedances– Excitation of modes in circular waveguides – Microwave cavities, Rectangular cavity resonator, Circular cavity resonator</p>

Regulation 2018		Semester IV	Total Hours			60
Category	Course Code	Course Name	Hours / Week			C
			L	T	P	
C	18ECC207T	Signals and Systems	3	1	0	4

**Prerequisite Course (s)**

Circuit Analysis , Calculus and Transforms

**Course Objective (s):**

1	Classify the different types of signals and systems
2	Understand the mathematical transforms for CT signal analysis
3	Understand the Fourier and Laplace transform for CT system design
4	Understand the concept of sampling process and Z-transform
5	Apply mathematical knowledge to design DT systems

**Course Outcome (s) (COs):**

CO1	Classify various signals and its properties (K3)
CO2	Apply Fourier Series, Fourier Transform and laplace transform to analyze the continuous time Signals (K3)
CO3	Make use of CIFT and Laplace Transform to analyze continuous time systems (K3)
CO4	Solve discrete time signal problems with DTFT and Z-transform (K3)
CO5	Analyze Z-transform and DTFT for discrete time system (K3)

**CO-PO Mapping**

Cos	POs												PSOs	
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

UNIT I	CLASSIFICATION OF SIGNALS AND SYSTEMS	12
Representation of signals, Elementary of signals –Step, Ramp, Impulse, Pulse, Exponential – Classification of Continuous Time(CT) and Discrete Time(DT) signals – periodic and aperiodic, even and odd, energy and power, deterministic and random–Operation on signals, CT and DT systems, properties of systems –memory systems, linearity, time invariance, causality, stability, invertibility.		
UNIT II	ANALYSIS OF CONTINUOUS TIME SIGNALS	12
Fourier series analysis of periodic signals, properties of Continuous Time Fourier Series (CTFS) – Continuous Time Fourier Transform (CTFT) and properties, Laplace Transform in signal analysis and properties, Inverse Laplace Transform.		
UNIT III	ANALYSIS OF CONTINUOUS TIME SYSTEMS	12
Convolution integrals, Analysis and characterization of LTI systems of CTFT and Laplace Transform – computation of impulse response and transfer function using Laplace Transform, frequency response of systems characterized by difference equations, State variable equations and matrix representation of systems.		
UNIT IV	SAMPLING THEOREM AND ANALYSIS OF DISCRETE TIME SIGNALS	12
Representation of CT signals by its sample – Sampling theorem – Reconstruction of a signal from its samples, aliasing – Discrete Time Fourier Transform (DTFT) and analysis – properties, Z-transform and properties.		
UNIT V	ANALYSIS OF DISCRETE TIME SYSTEMS	12
Convolution sum, Analysis and characterization of LTI systems of DTFT and Z-transforms, Frequency response of systems characterized by differential equations - computation of impulse response and transfer function using Z-transforms - Block diagram representation – direct form I, direct form II, cascade and parallel forms – State variable equation and matrix representation of systems.

<b>Prerequisite Course (s)</b>														
Digital Electronics														
<b>Course Objective (s):</b> The purpose of learning this course is to:														
1	Study the Architecture of 8086 microprocessor.													
2	Study about communication and bus interfacing													
3	Study the Architecture of 8051 microcontroller													
4	Study the interfacing in micro controller													
5	Acquire the knowledge of embedded system design using MSP430 microcontrollers.													
<b>Course Outcome (s) (COs):</b> At the end of this course, learners will be able to:														
CO1	Experiment with 8086 Microprocessor (K3)													
CO2	Identify Appropriate interfacing in Microprocessor application(K3)													
CO3	Make use of 8051 Microcontroller based systems for various ALP Design (K3)													
CO4	Construct various Interfacing circuits for Microcontrollers. (K3)													
CO5	Interpret the architectural features of MSP430 (K2)

<b>UNIT I</b>	<b>8086 MICROPROCESSOR</b>	<b>9</b>
Introduction to 8086 – Microprocessor architecture – Addressing modes - Instruction set and assembler directives – Assembly language programming – Modular Programming - Linking and Relocation - Stacks - Procedures – Macros – Interrupts and interrupt service routines – Byte and String Manipulation.		
<b>UNIT II</b>	<b>8086 I/O INTERFACING</b>	<b>9</b>
Memory Interfacing and I/O interfacing - Parallel communication interface – Serial communication interface – D/A and A/D Interface - Timer – Keyboard /display controller – Interrupt controller – DMA controller – Programming and applications Case studies: Traffic Light control, LED display, LCD display, Keyboard display interface and Alarm Controller		
<b>UNIT III</b>	<b>8051 MICROCONTROLLER</b>	<b>9</b>
Architecture of 8051 – Special Function Registers (SFRs) - I/O Pins Ports and Circuits - Instruction set - Addressing modes - Assembly language programming.		
<b>UNIT IV</b>	<b>8051 INTERFACING MICROCONTROLLER</b>	<b>9</b>
Programming 8051 Timers - Serial Port Programming - Interrupts Programming – LCD & Keyboard Interfacing - ADC, DAC & Sensor Interfacing - External Memory Interface- Stepper Motor and Waveform generation.		
<b>UNIT V</b>	<b>INTRODUCTION TO MSP430</b>	<b>9</b>
Motivation for MSP430 microcontrollers- Low Power embedded systems, On-chip peripherals (analog and digital), low-power RF capabilities. MSP430 RISC CPU architecture, Compiler-friendly features, & Instruction set.		
<b>LIST OF EXPERIMENTS</b>		<b>15</b>
<ol style="list-style-type: none"> <li>1. Arithmetic and Logical Operation using 8086Microprocessor.</li> <li>2. Programming with 8086- Code Conversion and MatrixMultiplication.</li> <li>3. **Course Objective (s):**

The purpose of learning this course is to:

- 1 Focus on listening, speaking, & writing skills through audio & video sessions
- 2 Hone soft skill and analytical ability of students
- 3 Overcome the fear in group communication and to provide the effective communication
- 4 Expertise intelligible pronunciation, stress and intonation patterns

**Course Outcome (s) (Cos):**

At the end of this course, learners will be able to:

- CO1 Solve both analytical and logical problems in an effective manner
- CO2 Demonstrate an ability to design and deliver messages
- CO3 Improve their communication with practical experience

**CO-PO Mapping**

<b>Course Objective (s):</b>															
The purpose of learning this course is to:															
CLR-1	Make students understand the role and impact of culture in human life.														
CLR-2	Draw attention towards languages and literatures of ancient period.														
CLR-3	Cultivate secularism in students														
CLR-4	Equip students with the knowledge of Indian art and architectural evolution over years.														
CLR-5	Make students identify Indian culture in abroad.														
<b>Course Outcome (s) (Cos):</b>															
At the end of this course, learners will be able to:															
CO1	Understand the meaning of culture, trace the influence and significance of geographical features on Indian culture.														
CO2	Develop an awareness of the variety of languages and literatures in India.														
CO3	Recognise the characteristics of various religious movements in ancient India.														
CO4	Identify the characteristics and various styles of Indian architecture and sculpture at different times.														
CO5	Examine various modes through which Indian culture spread abroad.

<b>UNIT I</b>	<b>HISTORY OF INDIAN CULTURE</b>	<b>2</b>
Characteristics of Indian Culture - Significance of Geography on Indian Culture -Society in India through ages- Ancient Period - Varna and Jati, family and marriage in India - Position of women in ancient India- Contemporary period; Caste system and communalism.		
<b>UNIT II</b>	<b>LITERATURE AND EDUCATION</b>	<b>4</b>
Evolution of script and languages in India : Harappan Script and Brahmi Script, Short History of the Sanskrit Literature: The Vedas, The Brahmanas and Upanishads and Sutras, Epics: Ramayana and Mahabharata&Puranas - History of Buddhist and Jain Literature in Pali, Prakrit and Sanskrit, Sangam Literature and Odia Literature.		
<b>UNIT III</b>	<b>RELIGION AND PHILOSOPHY</b>	<b>4</b>
Religion and Philosophy in India: Ancient Period: Pre-Vedic and Vedic Religion, Buddhism and Jainism, Indian Philosophy - Vedanta and Mimansa school of Philosophy.		
<b>UNIT IV</b>	<b>ART AND ARCHITECTURE</b>	<b>2</b>
Indian Art & Architecture: Gandhara School and Mathura School of Art; Hindu Temple Architecture, Buddhist Architecture, Medieval Architecture and Colonial Architecture, Indian Painting Tradition, Performing Arts: Divisions of Indian classical music: Hindustani and Carnatic, Dances of India, Rise of modern theatre and Indian cinema.		
<b>UNIT V</b>	<b>SPREAD OF INDIAN CULTURE ABROAD</b>	<b>3</b>
Causes, Significance and Modes of Cultural Exchange - Through Traders, Teachers, Emissaries, Missionaries and Gypsies, Indian Culture in South East Asia, India, Central Asia and Western World through ages.

Approved by AICTE & Affiliated to Anna University  
ISO 9001:2015 Certified Institution  
Thalavapalayam, Karur, Tamilnadu.

UNIT I	DISCRETE FOURIER TRANSFORM	9
Discrete Fourier transform (DFT): Properties - Linear filtering using DFT - Filtering long data sequences: overlap save and overlap add method - Fast computation of DFT(FFT): Radix-2 Decimation-in-time (DIT), Decimation-in-frequency (DIF).		
UNIT II	DESIGN OF DIGITAL FILTER	9
<b>IIR FILTER:</b> Design of IIR filters from analog filters (LPF, HPF) -Design of Digital Butterworth and Chebyshev filter using impulse invariance technique and bilinear transformations. <b>FIR FILTER:</b> Linear Phase FIR Filter characteristics - Design of Digital FIR Filter using windowing (LPF, HPF) Technique (Rectangular, Hamming, Hanning, Triangular) and frequency sampling method.		
UNIT III	FINITE WORD LENGTH EFFECTS	9
Quantization noise : truncation and rounding error, derivation for quantization noise power , Direct & Cascade Form- Types of Quantization: input quantization error, product quantization error, coefficient quantization error – limit cycle oscillations and dead band - signal scaling.		
UNIT IV	MULTIRATE DIGITAL SIGNAL PROCESSING	9
Introduction to Multirate signal processing- Interpolation and Decimation, Decimation by an integer factor - Interpolation by an integer factor - Sampling rate conversion by a rational factor - Multistage implementation of sampling rate conversion - Applications of Multirate signal processing.		
UNIT V	DSP PROCESSORS	9
Features of DSP processors – Fixed point Vs floating point DSP processor – Memory architecture of a DSP processor: Von Neumann and Harvard – Architecture of TMS320C5x- instruction set – Addressing Modes – Architecture of TMS320C8x Processor-Application of DSPs.		

LIST OF EXPERIMENTS		15

**Prerequisite Course (s)**

Probability and Random Process

**Course Objective (s):**The purpose of learning this course is to:

- 1 Understand the modulation, demodulation, design and types of Amplitude modulation schemes.
- 2 Disseminate the students with the technique for generating and demodulating narrowband frequency, wideband frequency and phase modulated signals.
- 3 Understand the Performance of CW modulation systems and Information theory

**Course Outcome (s) (COs):**At the end of this course, learners will be able to:

- CO1 Develop the modulation system and analyze it in generation and detection of Amplitude modulation (K3)
- CO2 Apply the narrowband and wideband frequency signals on FM system(K3)
- CO3 Identify different types of noises and its associated parameters. (K3)
- CO4 Analyze the noise performance over various receivers in communication systems. (K4)
- CO5 Examine the Information attributes and apply over the coding schemes. (K4)

1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

<b>UNIT I</b>	<b>AMPLITUDE MODULATION SYSTEMS</b>	<b>9</b>
Basic blocks of Communication System - Generation and demodulation of AM techniques – Square law modulator and Detector - Balanced modulator, switching modulator, Envelope detector - Generation and Detection of DSB - SC - Balanced modulator, Ring modulator, Linear detector and Envelope detector, Generation and detection of SSB- SC - Phase and frequency discrimination, Coherent detection – VSB, High Power and Low power transmitter, Super heterodyne Receiver		
<b>UNIT II</b>	<b>ANGLE MODULATION SYSTEMS</b>	<b>9</b>
Basic Principles – Types of Angle Modulation: Frequency Modulation, Phase Modulation – Narrow Band FM & Wide Band FM - Transmission Bandwidth of FM signals - Generation of FM signal - Direct FM - Indirect FM - Demodulation of FM signals ,PLL		
<b>UNIT III</b>	<b>NOISE PERFORMANCE</b>	<b>9</b>
Noise – Types : External and Internal Noise - Shot noise, thermal noise, White noise – Signal-to-Noise Ratio - Noise Figure - Noise Temperature -Noise equivalent Bandwidth – Narrowband noise – Representation of Narrowband noise in terms of envelope and phase components		
<b>UNIT IV</b>	<b>PERFORMANCE OF CW MODULATION SYSTEMS</b>	<b>9</b>
Noise in AM receivers threshold effect - Noise in DSB-SC receiver – Noise in SSB receiver – Noise in FM receivers capture effect – FM threshold effect – FM threshold reduction– Pre-emphasis and de-emphasis in FM – Comparison of performance of AM and FM Systems.		
<b>UNIT V</b>	<b>INFORMATION THEORY</b>	<b>9</b>
Discrete Messages and Information Content, Concept of Amount of Information, Average information, Entropy, Information rate - Shannon-Fano coding, Huffman coding, Shannon's Theorem, Channel Capacity - Rate Distortion Theory

Prerequisite Course (s)							Nil							
Course Objective (s): The purpose of learning this course is to:														
1	Develop entrepreneurship and self-employment abilities to start any venture plan, use, and monitor and control resources optimally and economically.													
2	Know the Micro, small and medium industries Registration Process.													
3	Study about product selection and development.													
4	Learn about the Project report preparation.													
5	Analysis the Enterprise risk management.													
Course Outcome (s) (COs): At the end of this course, learners will be able to:														
CO1	Identify entrepreneurial quality.													
CO2	Know the entrepreneurial support agencies.													
CO3	Prepare project setup planning and project report													
CO4	Select appropriate agencies for technical and financial support.													
CO5	Explain SWOT analysis and strategies to achieve goals.

<b>UNIT I</b>	<b>INTRODUCTION TO SELF-EMPLOYMENT AND ENTREPRENEURSHIP DEVELOPMENT</b>	<b>6</b>
Introduction of self-employment – Characteristics- Creativity, Entrepreneurship development-Qualities of entrepreneur and Characteristics of Diploma holder as a self-employer like developing networking and personal contacts, importance of productivity, quality, cost consciousness and customers' satisfaction. Types of enterprise-Sole partnership -Partnership firm- Joint stock company- Co-operative society.		
<b>UNIT II</b>	<b>ENTREPRENEURIAL SUPPORT AGENCIES</b>	<b>6</b>
Definition – Micro, small and medium industries- Registration process of an enterprise with Government agencies-Name, type and role of state and national level support agencies. Current state & National Level Promotional Schemes for establishment of new.		
<b>UNIT III</b>	<b>PROJECT SET UP PLANNING</b>	<b>6</b>
Product Selection: importance- Product development stages. Process Selection: Factors affecting process selection - Technology lifecycle. Process Conversion-Capacity Planning: Basic method to assess / estimate capacity. Selection of location and layouts: Factors affecting selection of location - Objectives and types of plant layout.		
<b>UNIT IV</b>	<b>PROJECT PROPOSAL PLANNING</b>	<b>6</b>
7-M resources- Marketing- definition, need for enterprise, 4Ps channels- Market survey. Methods - Project report preparation for mechanical feature based product: Meaning of project planning and report: Feasibility study. Details required for preparing project plan. Project cost estimation.		
<b>UNIT V</b>	<b>ENTERPRISE AND RISK MANAGEMENT</b>	<b>6</b>
Concept of risk in the context of enterprise/ project-Uncertainty and certainty of project elements- Decision making under risk-Methods of risk management-Strength, Weakness, Opportunity and Threat (SWOT) analysis.

H	18MBH201T	MANAGEMENT PRINCIPLES FOR ENGINEERS	2	0	0	2

**Prerequisite Course (s)**

Nil

**Course Objective (s):** The purpose of learning this course is to:

- 1 Enable the students to study the evolution of management.
- 2 Study about planning tools and techniques in management for engineers.
- 3 Learn about career planning for engineers.
- 4 Enable the effective and barriers communication in the organization.
- 5 Study the system and process of effective controlling in the organization.

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

- CO1 Acquired the knowledge on fundamental concept of management and its various functions.
- CO2 Gained knowledge on planning and decision making process.
- CO3 Attained the knowledge of organization structure and career planning.
- CO4 Demonstrate the ability to directing, leadership and communicate effectively.
- CO5 Analysis isolates issues and formulates best control methods.

<b>UNIT I</b>	<b>INTRODUCTION TO MANAGEMENT PRINCIPLES</b>	6
Meaning, Definition of Management – Managerial Role - POSDCORB -Management vs. Administration- Evolution of Management Thoughts- Henry Fayol's 14 Principles- Opportunities and Challenges in Management.		
<b>UNIT II</b>	<b>PLANNING</b>	6
Nature and purpose of planning – Planning process – Types of planning – Objectives – Setting - Objectives – policies – Planning premises – Strategic Management – Planning Tools and Techniques – Decision making steps and process.		
<b>UNIT III</b>	<b>ORGANIZING</b>	6
Nature and purpose – Formal and informal organization – organization chart – Organization Structure- Types – Line and staff authority – Departmentalization – Delegation of Authority – Centralization and Decentralization – Job Design.		
<b>UNIT IV</b>	<b>DIRECTING</b>	6
Foundations of individual and group behavior – Motivation – Motivation Theories – Motivational - Techniques –Leadership – Types and Theories of Leadership – Communication – Process of Communication – Barrier in Communication – Effective Communication.		
<b>UNIT V</b>	<b>CONTROLLING</b>	6
System and Process of Controlling – budgetary and Non-Budgetary Control Techniques – Use of Computers and IT in Management control – Control and performance – Direct and Preventive control – Reporting.

Curriculum and Syllabus | 2018 Regulation

<b>UNIT I</b>	<b>PULSE MODULATION</b>	<b>9</b>
Sampling Process – Quantization process – PAM, PWM, PPM - PCM - Noise considerations in PCM Systems – Differential pulse code modulation -Delta modulation - Adaptive Delta Modulation- TDM - Digital multiplexers		
<b>UNIT II</b>	<b>BASEBAND PULSE TRANSMISSION</b>	<b>9</b>
Matched Filter – Inter symbol Interference - Nyquist's criterion for Distortion less Base band Binary Transmission - Correlative level coding – Adaptive Equalization –Eye patterns		
<b>UNIT III</b>	<b>PASS BAND DATA TRANSMISSION</b>	<b>9</b>
Introduction – Pass band Transmission model- Generation, Detection, Signal space diagram, bit error probability and Power spectra of BPSK, QPSK, QAM, MSK, FSK schemes – Comparison of Digital modulation systems using a single carrier		
<b>UNIT IV</b>	<b>ERROR CONTROL CODING</b>	<b>9</b>
Linear block codes - Cyclic codes - Convolutional codes – Maximum likelihood decoding of convolution codes - Viterbi Algorithm -Turbo Codes		
<b>UNIT V</b>	<b>SPREAD SPECTRUM MODULATION</b>	<b>9</b>
Pseudo- noise sequences –spread spectrum –Direct sequence spread spectrum with coherent binary phase shift keying – Signal space Dimensionality and processing gain –Probability of error – Frequency hop spread spectrum –Maximum length and Gold codes		
<b>LIST OF EXPERIMENTS</b>		<b>15</b>
1. Verification of Sampling theorem 2. Study of Pulse analog modulation (PAM, PWM and PPM) 3. Design and implementation of PCM and DPCM 4. Design and Implementation of Delta modulator 5. Design and implementation of ASK, FSK and PSK 6. Simulation of Duo binary Signaling 7. Simulation of BPSK Modulation and Demodulation 8. Simulation of QPSK Modulation and Demodulation 9. BER Analysis of BPSK and QPSK over AWGN 10. Study of linear block code error control coding technique

<b>Prerequisite Course (s)</b>															
NIL															
<b>Course Objective (s):</b> The purpose of learning this course is to:															
CLR-1	Introduce the learners to various art forms and what their aesthetics sense.														
CLR-2	Improve learners' knowledge on history of theatre and drama and draw connections between theatrical practices and social contexts in both modern and pre modern periods..														
CLR-3	Enable the learners to identify and understanding various types of dance and music concepts														
CLR-4	Make learners explore the diversity of Architecture, Sculpture, Painting and its intersection with community, culture and society.														
CLR-5	Make students to get familiarized with the formal, historical, and theoretical aspects of literary arts.														
<b>Course Outcome (s) (COs):</b> At the end of this course, learners will be able to:															
CO1	Identify aesthetics traits found throughout Indian art.														
CO2	Demonstrate understanding of the social and artistic movements that have shaped theatre and dance.														
CO3	Recognize different concepts involved in music and dance.														
CO4	Identify and appreciate the salient features and various styles of Indian Architecture, Sculpture and Painting at different times.														
CO5	Demonstrate a broad understanding of Indian literary arts and appreciate the role that historical context plays in the creation and Interpretation of literary works

<b>Prerequisite Course (s)</b>														
Nil														
<b>Course Objective (s):</b> The purpose of learning this course is to:														
1	Learn about fundamental concept of social engineering													
2	Know the different elements of ethical hacking and social engineering.													
3	Understand the concepts of threats and attack vectors													
4	Understand the ethical hacking													
5	Learn about the attacks against individuals and organizations													
<b>Course Outcome (s) (COs):</b> At the end of this course, learners will be able to:														
CO1	Understand the concept of social engineering and types of attacks.													
CO2	Identify the key security concepts, CIA and IT governance and best practices													
CO3	Understand principles of social engineering.													
CO4	Exhibit the ethical hacking concepts and scopes, threats and attack vectors and common areas of vulnerability.													
CO5	Gain knowledge of attacks against individuals and organizations.													
<b>CO-PO Mapping</b>

1: Slight (Low)

2: Moderate (Medium)

<b>UNIT I</b>	<b>INTRODUCTION TO SOCIAL ENGINEERING</b>	<b>6</b>
Social Engineering Defined - Why Does Social Engineering Work - Identify Communication Style - key aspects of social engineering - Categories of Social Engineering Attacks – human – based attacks and technology - based attacks		
<b>UNIT II</b>	<b>KEY SECURITY</b>	<b>6</b>
Key security - concepts - Types of key security concepts – Cyber security position. The CIA Triad - the significance of incident response and frameworks around cyber security. IT Governance - Best practices - compliance.		
<b>UNIT III</b>	<b>PSYCHOLOGY OF SOCIAL ENGINEERING</b>	<b>6</b>
Mind Tricks: Psychological Principle - Four fundamental aspects of human nature that social engineers - the desire to be helpful - the tendency to be trusting - the fear of offending others - the tendency to cut corners		
<b>UNIT IV</b>	<b>ETHICAL HACKING AND SOCIAL ENGINEERING</b>	<b>6</b>
Ethical Hacking Concepts and Scopes - Threats and Attack Vectors - Information Assurance - Threat Modelling - Enterprise Information Security Architecture - Vulnerability Assessment and Penetration Testing - Types of Social Engineering - Insider Attack - Preventing Insider Threats - Social Engineering Targets and Defence Strategies. Common Areas of Vulnerability - Appropriate access - Assessed resistance - Information availability		
<b>UNIT V</b>	<b>CASES OF SOCIAL ENGINEERING</b>	<b>6</b>
Notable Cases of Social Engineering - Attacks against Individuals - Attacks against Organizations - Preventing Social Engineering Attacks - Mitigating the Damage of Social Engineering Attacks - Segregation of Access - Maintain Access Logs - Ensure That Backups Occur Regularly - Automatically Revoke User Privileges If Suspicious Activity Is Detected

Category	Course Code	Course Name	Hours / Week			C								
			L	T	P									
C	18ECC401T	WIRELESS COMMUNICATION	3	0	0	3								
<b>Prerequisite Course (s)</b>														
Analog Communication, Digital Communication														
<b>Course Objective (s):</b> The purpose of learning this course is to:														
1	Achieve comprehensive understanding of the cellular path loss and shadow models													
2	Understand the concept of multipath models and its capacity analysis													
3	Study the various types of Modulation along with its bit error rate analysis.													
4	Know the various issues in transmit and receive diversity analysis.													
5	Learn about the various frequency standards of multicarrier modulation													
<b>Course Outcome (s) (COs):</b> At the end of this course, learners will be able to:														
CO1	Apply the Cellular Concept and Radio Wave Propagation Model in wireless communication (K3)													
CO2	Utilize various signaling schemes and capacity analysis for fading channels (K3)													
CO3	Identify the BER Performance for various modulation schemes in fading Environment (K3)													
CO4	Analyze the various diversity techniques to mitigate the fading effect (K4)													
CO5	Distinguish various multicarrier modulation techniques used in wireless communication (K4)													
<b>CO-PO Mapping</b>

1: Slight (Low)      2: Moderate (Medium)      3: Substantial (High)

<b>UNIT I</b>	<b>WIRELESS FUNDAMENTALS</b>	<b>9</b>
Cellular concept - Path loss and shadowing: Radio Wave Propagation - Transmit and Receive Signal Models - Free-Space Path Loss - Ray Tracing - Empirical Path Loss Models - Simplified Path Loss Model - Shadow Fading - Combined Path Loss and Shadowing.		
<b>UNIT II</b>	<b>STATISTICAL MULTIPATH MODELS AND CAPACITY ANALYSIS</b>	<b>9</b>
Time-Varying Channel Impulse Response - Narrowband Fading Models - Wideband Fading Models - Capacity of Flat fading Channels - Channel and system model - Channel Distribution Information (CDI) Known - Channel Side Information at Receive - Channel Side Information at transmitter and receiver - Capacity of frequency selective fading Channels - Time Invariant Channels - Time varying Channels.		
<b>UNIT III</b>	<b>BER ANALYSIS</b>	<b>9</b>
Digital Modulation and Detection: Signal Space analysis - Pass band modulation principles - Amplitude and Phase Modulation - Frequency modulation - Pulse shaping - Error probability analysis in fading channels.		
<b>UNIT IV</b>	<b>SPATIAL DIVERSITY</b>	<b>9</b>
Transmit Diversity: Channel known at transmitter - Channel unknown at transmitter- The Alamouti scheme - Receive Diversity: Selection combining - Equal Gain combining - Threshold Combining - Maximal Ratio Combining - Spatial Multiplexing in MIMO - Moment Generating functions in diversity analysis.		
<b>UNIT V</b>	<b>MULTICARRIER MODULATION</b>	<b>9</b>
The multicarrier concept - Orthogonal Frequency Division Multiplexing (OFDM) basics - Multiple access for OFDM systems - Orthogonal Frequency Division Multiple Access (OFDMA) - Single Carrier Frequency Division Multiple Access (SCFDMA).

Category	Course Code	Course Name	Hours / Week			C
			L	T	P	
E	18ECE001J	VLSI Design	3	0	2	4

**Prerequisite Course (s)**

Digital Electronics, Integrated Circuits

**Course Objective (s):** The purpose of learning this course is to:

- 1 Understand the CMOS Fabrication Process and CMOS Circuits.
- 2 Study CMOS Circuits using various Logic Styles.
- 3 Provide basic knowledge about FPGA and VLSI System Design.

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

- CO1 Utilize the fundamental concepts in MOS transistors for CMOS VLSI design (K3)
- CO2 Examine the design of CMOS circuits and FPGA using various logic styles (K3)
- CO3 Distinguish the different types of power consumption in COMS circuits (K4)
- CO4 Evaluate the various testing methods available for CMOS logic (K5)
- CO5 Make use of the modern EDA tools to design VLSI circuits (K3)

**CO-PO Mapping**

1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

<b>UNIT I</b>	<b>MOS TRANSISTOR THEORY</b>	<b>9</b>
CMOS Technology: n-well, p-well - Twin tub and SOI Process- VLSI Layout Design: Layout design rules- Lambda Design Rules- Stick Diagram: examples. MOS Transistor Theory: Basic MOS transistors: symbols, Enhancement mode transistor operation – Second order effects – Small signal AC characteristics - NMOS inverter - Determination of pull up to pull down ratio - CMOS inverter - DC Characteristics.		
<b>UNIT II</b>	<b>CMOS LOGIC STYLES AND PROGRAMMABLE DEVICE</b>	<b>9</b>
CMOS Logic Styles: Pass Transistor and Transmission Gate - Static CMOS design - Pseudo NMOS -dynamic CMOS logic - Clocked CMOS logic – domino CMOS logic. FPGA: Field Programmable gate arrays- Logic blocks, routing architecture, Design flow technology -mapping for FPGAs, Xilinx XC4000		
<b>UNIT III</b>	<b>CMOS CIRCUIT CHARACTERIZATION</b>	<b>9</b>
Switching Characteristics: analytical delay model-Empirical delay model- Gate delays - Power dissipation: Static Dissipation- Dynamic Dissipation- Short circuit Dissipation-Total Power Dissipation- charge sharing- Design margining- Reliability.		
<b>UNIT IV</b>	<b>TESTING</b>	<b>9</b>
Need for testing- Manufacturing Test Principles -Design Strategies for Test: Design for Testability – Ad-hoc Testing – Scan based test Techniques- System level test techniques.		
<b>UNIT V</b>	<b>VERILOG HDL DESIGN</b>	<b>9</b>
Basic concepts- identifiers- gate primitives, gate delays, operators, timing controls, procedural assignments conditional statements, Data flow and RTL, structural gate level switch level modeling, Design hierarchies, Behavioral and RTL modeling, Test benches, Structural gate level description of decoder, equality detector, comparator, priority encoder, half adder, full adder, Ripple carry adder, D latch and D flip flop.		
<b>LIST OF EXPERIMENTS</b>		<b>15</b>
<ol style="list-style-type: none"> <li>1. Verilog HDL based design entry and simulation of combinational circuits (4-bit min).</li> <li>2. Verilog HDL based design entry and simulation of sequential circuits.</li> <li>3. Verilog HDL based design entry and simulation of state machine.</li> <li>4. Synthesis, P&amp;R and post P&amp;R simulation of 4-Bit Serial Adder.</li> <li>5. Synthesis, P&amp;R and post P&amp;R simulation of 4-Bit Parallel Adder/Subtractor.</li> <li>6. Design and Synthesis of 4-Bit Multiplier using Xilinx ISE Simulator.</li> <li>7. Basic logic gates using T-Spice Tool.</li> <li>8. Design and simulation of a simple five transistor differential amplifier using T-spice and measure gain, ICMR, and CMRR.</li> <li>9. Design a Real Time Clock and Demonstrate its Working on The FPGA Board.</li> <li>10. Design and Testing of 8-Bit ALU on FPGA Board.</li> </ol>

			L	T	P	
E	18ECE002J	EMBEDDED SYSTEM DESIGN	3	0	2	4

**Prerequisite Course (s)**

Microprocessor and Microcontroller

**Course Objective (s):** The purpose of learning this course is to:

1	Study ARM Embedded systems and processor fundamentals
2	Learn ARM Organizations, Implementations and Processor cores
3	Understand ARM CPU cores and the AMULET asynchronous ARM processors
4	Enumerate the idea of EMBEDDED communication protocols and RTOS
5	Study system debugging and few applications of embedded systems

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

CO1	Infer the knowledge about ARM Embedded systems and processor fundamentals. (K2)
CO2	Explain the functionalities of ARM Organizations, Implementations and Processor cores. (K2)
CO3	Illustrate the concepts of ARM CPU cores along with AMULET asynchronous ARM processors. (K2)
CO4	Experiment with the interfaces of Communication Protocols in ARM Processor.(K3)
CO5	Analyse the system debugging features and applications of ARM processor.(K4)

**Prerequisite Course (s)**

Embedded systems

**Course Objective (s):** The purpose of learning this course is to:

1	Develop the skills for working in Real Time Systems
2	Acquire essential skills for developing various real time models.
3	Develop skills in working of $\mu$ C/OS-II RTOS
4	Compare different types and Functionalities in RTOS.
5	Apply concepts of RTOS in real life problems

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

CO1	Schedule tasks in real time models using RTOS
CO2	Describe Various Real time models
CO3	Perform inter task communication in $\mu$ C/OS- II RTOS
CO4	Describe Principles and design issues in RTOS Functions.
CO5	Develop various RTOS based applications.

<b>UNIT I</b>	<b>NETWORK ARCHITECTURE AND DATA LINK LAYER</b>	<b>9</b>
Introduction: Overview of data communication-Topology – Protocols and standards - OSI architecture,TCP/IP Model-Introduction to data link layer-Error detection and correction-Flow Control: Stop and Wait – Error Control: Sliding window protocols (Go back N ARQ, Selective repeat ARQ).		
<b>UNIT II</b>	<b>MEDIUM ACCESS SUBLAYER</b>	<b>9</b>
Medium Access layer: Random access - Controlled access - Wired LAN - IEEE 802.3: Standard Ethernet , Fast Ethernet, Gigabit Ethernet IEEE 802.4: Token Ring - IEEE 802.5: Token Bus - Virtual LANs-IEEE802.11-Bluetooth.		
<b>UNIT III</b>	<b>INTERNETWORK LAYER AND ROUTING ALGORITHMS</b>	<b>9</b>
Connecting devices: Repeaters, Hubs, Switches and Gateways -Circuit switching- Packet switching - IPv4 - IPv6 – Address Mapping: ARP- Error Reporting: ICMP- Subnetting – Routing: Distance Vector Routing (RIP) – Link State Routing (OSPF) -Multicast routing: DVMRP-MOSPF.		
<b>UNIT IV</b>	<b>TRANSPORT LAYER</b>	<b>9</b>
Process-to-Process delivery-User Datagram Protocol (UDP) –Transmission Control Protocol (TCP) – Stream Control Transmission Protocol(SCTP)- Congestion Control – Quality of services (QoS) – Techniques to improve QoS-Integrated services –Differential services.		
<b>UNIT V</b>	<b>APPLICATION LAYER AND NETWORK SECURITY</b>	<b>9</b>
Domain Name Space (DNS) - E-Mail-FTP- HTTP and SMTP- VoIP-TELNET-Security–Symmetric key Cryptography : DES, Triple DES, Asymmetric key Cryptography:RSA, Diffie Hellman, Firewalls.		
<b>LIST OF EXPERIMENTS</b>		<b>15</b>
<ol style="list-style-type: none"> <li>1. Implementation of Ethernet LAN Protocol for Star, Bus and Ring topology using Cisco Packet Tracer</li> <li>2. Implement three nodes point – to – point network with duplex links between them. Set the queue size, vary the bandwidth and find the number of packets dropped</li> <li>3. Implementation of Stop and wait protocol &amp; sliding window protocol</li> <li>4. Simulation of Go Back N protocol and Selective repeat protocols</li> <li>5. Implementation of Distance vector routing algorithm using Cisco Packet Tracer</li> </ol>		

6. Implementation of Link state routing algorithm using Cisco Packet Tracer
7. Implementation of Transmission control protocol in sensor network
8. Implementation of Congestion control using leaky bucket algorithm
9. Implementation of Error detection and Error correction techniques
10. Implementation of Data encryption and decryption.

Regulation 2018		Semester ___	Total Hours			45
Category	Course Code	Course Name	Hours / Week			C
			L	T	P	
E	18ECE006T	AUTOMOTIVE EMBEDDED SYSTEMS	3	0	0	3

**Prerequisite Course (s)**

Embedded system

**Course Objective (s):** The purpose of learning this course is to:

1	Learn about the basic concepts of embedded system in Automobile engineering.
2	Understand the concepts of C coding of Automotive Embedded system
3	Study the ARM Modules of Automotive Embedded system
4	Study the concepts of LIN protocol.
5	Analyse the Testing of Embedded system in Vehicle Network Diagnostics.

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

CO1	Remembering about the basics of Electronics in the Automotive Embedded Systems.
CO2	Understanding and apply drive by Programming of Automotive Embedded system and Embedded C & Coding Standards for Automotive.
CO3	Study and Applying of the Introduction to ARM Microcontrollers, Architecture, Peripherals and Interfacing.
CO4	Analyzing the Automotive Protocol - Local Interconnect Network (LIN) using software.
CO5	Understand the testing methods of Vehicle Network Diagnostics.

**CO-PO Mapping**

<b>UNIT I</b>	<b>INTRODUCTION TO AUTOMOTIVE EMBEDDED SYSTEMS</b>	<b>9</b>
Overview of present-day embedded products - Basic building blocks of embedded systems - Automotive Systems Overview -Embedded Technology in Automotive Industry -Embedded System Development Process - Tool Chain and Cross Compilation.		
<b>UNIT II</b>	<b>EMBEDDED C &amp; CODING STANDARDS FOR AUTOMOTIVE</b>	<b>9</b>
Introduction to C -Introduction to C Automotive Standard -Loops and Control Flow-Functions-Storage Class and Linkage –Macro –Arrays –Pointers -Structures, Unions and Enums -Data Structures.		
<b>UNIT III</b>	<b>INTRODUCTION TO ARM MICROCONTROLLERS, ARCHITECTURE, PERIPHERALS AND INTERFACING</b>	<b>9</b>
Overview of Architecture Of Microcontroller -Introduction to Development Tools and Environment: Programmers, Debuggers, Emulators, Simulators, Development Board -Using On-Chip Peripherals for applications -Interfaces to External Peripherals: Display, Switch, ADC, Sensors.		
<b>UNIT IV</b>	<b>AUTOMOTIVE PROTOCOL - LOCAL INTERCONNECT NETWORK (LIN)</b>	<b>9</b>
Introduction to CAN Protocol - Basics of CAN Standard and Extended -CAN communication -Basics of Implementation of CAN Protocols - CAN Bus Analyser Tool Chain - Fault simulations- Applications.		
<b>UNIT V</b>	<b>VEHICLE NETWORK DIAGNOSTICS</b>	<b>9</b>
Process of Automotive Fault Diagnostics, Fault Codes - Vehicle Systems On- and Off- Board Diagnostics - Steps taken to diagnose a fault - Diagnostics Protocols – Industrial Standards.

			L	T	P	
E	18ECE007T	TESTING OF VLSI DESIGN	3	0	0	3

**Prerequisite Course (s)**

Digital Electronics, VLSI Design

**Course Objective (s):** The purpose of learning this course is to:

- 1 Study the concepts of basics of testing and fault modeling.
- 2 Understand the concepts of test generation for combinational and sequential circuits.
- 3 Study the concepts of design for testability.
- 4 Understand the concepts of self – test and test algorithms.
- 5 Study the concepts of fault diagnosis.

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

- CO1 Summarize the concepts of basics of testing and fault modeling.
- CO2 Review the test generation for combinational and sequential circuits.
- CO3 Summarize the design for testability.
- CO4 Summarize the concepts of self – test and test algorithms.
- CO5 Review the concepts of fault diagnosis.

176

UNIT I	BASICS OF FAULT MODELLING AND TESTING FOR COMBINATIONAL CIRCUITS AND SEQUENTIAL CIRCUITS	9
Faults in Logic Circuits - Breaks and Transistors Stuck-Open and Stuck-On or Stuck-Open Faults in CMOS, Basic Concepts of Fault Detection, Test Generation for combinational Logic circuits - Path Sensitization - D-Algorithm - PODEM - FAN - Delay Fault Detection. Designing Checking Experiments for sequential circuits		
UNIT II	LOGIC SIMULATION	9
Types of simulation - delay models - Element evaluation - Hazard detection - Gate level event driven simulation - Fault dominance - multiple stuck fault model - Fault simulation		
UNIT III	DESIGN FOR TESTABILITY	9
Design for Testability - Ad-hoc design - generic scan-based design - classical scan-based design - system level DFT approaches.		
UNIT IV	SELF - TEST AND TEST ALGORITHMS	9
Built-In self-Test - test pattern generation for BIST - Circular BIST - BIST Architectures - Testable Memory Design - Test Algorithms - Test generation for Embedded RAMs.		
UNIT V	FAULT DIAGNOSIS	9
Logical Level Diagnosis - Diagnosis by UUT reduction - Fault Diagnosis for Combinational Circuits - Self-checking design - System Level Diagnosis.

Category	Course Code	Course Name	Hours / Week			C								
			L	T	P									
E	18ECE008T	ASIC DESIGN	3	0	0	3								
<b>Prerequisite Course (s)</b>														
Digital Electronics, VLSI Design														
<b>Course Objective (s):</b> The purpose of learning this course is to:														
1	Classify the types of ASIC and ASIC library design													
2	Impact knowledge on programmable architectures for ASICs													
3	Identify the key steps in designing an ASIC													
4	Gain knowledge about partitioning, floor planning, placement and routing including circuit extraction of ASIC													
5	Classify different algorithms used for optimization in ASICs													
<b>Course Outcome (s) (COs):</b> At the end of this course, learners will be able to:														
CO1	Analyze the different types of ASICs and logic cells used in ASIC design													
CO2	Comprehend the different logic cell architecture													
CO3	Explain design tools and interconnects in programmable logic cells													
CO4	Develop knowledge in ASIC construction and Floor planning													
CO5	Analyze routing and different optimization techniques													
<b>CO-PO Mapping</b>														
COs	POs												PSOs

176

<b>UNIT I</b>	<b>ASIC AND CMOS LOGIC DESIGN</b>	<b>9</b>
Introduction-Types of ASICs - Design flow - Combinational logic cell – Sequential logic cell - Data path logic cell – ASIC Library design: Transistor as resistors -Transistor parasitic capacitance -Logical effort- Library cell design- Library architecture - gate array design- standard cell design - data path cell design.		
<b>UNIT II</b>	<b>PROGRAMMABLE ASIC LOGIC CELLS</b>	<b>9</b>
Anti-fuse- Types – Poly diffusion- Metal to metal antifuse - static RAM - EPROM and EEPROM technology - PREP benchmarks –Programmable Logic Cells: Actel ACT - Xilinx LCA –Altera FLEX - Altera MAX -Xilinx I/O blocks.		
<b>UNIT III</b>	<b>PROGRAMMABLE ASIC INTERCONNECT AND DESIGN TOOLS</b>	<b>9</b>
Actel ACT - Xilinx LCA - Xilinx EPLD-Altera MAX 5000 and 7000 - Altera MAX 9000 - Altera FLEX -Design systems - Logic Synthesis - Half gate ASIC -Schematic entry - Low level design language - PLA tools -EDIF- CFI design representation.		
<b>UNIT IV</b>	<b>ASIC CONSTRUCTION AND FLOOR PLANNING</b>	<b>9</b>
ASIC Construction: Physical Design- System Partitioning- FPGA Partitioning- Partitioning Methods. Floor planning and Placement: Floor planning- Placement- Physical Design Flow.		
<b>UNIT V</b>	<b>ROUTING AND OPTIMIZATION ALGORITHMS</b>	<b>9</b>
Routing: Global routing - detailed routing - special routing - circuit extraction – DRC-multichip modules (MCM) - Programmable logic arrays-Transistor chaining-Weinberger Arrays-Gate Matrix Layout-1D compaction-2D compaction.

Category	Course Code	Course Name	Hours / Week			C								
			L	T	P									
E	18ECE009J	INTERNET OF THINGS	3	0	2	4								
<b>Prerequisite Course (s)</b>														
NIL														
<b>Course Objective (s):</b> The purpose of learning this course is to:														
1	Introduce evolution of internet technology and need for IoT.													
2	Discuss on IoT reference layer and various protocols and software													
3	Train the students to build IoT systems using sensors, single board computers and open source IoT platforms.													
4	Make the students to apply IoT data for business solution in various domain in secured manner.													
5	Providing IoT Solutions with sensor-based application through embedded system platform													
<b>Course Outcome (s) (COs):</b> At the end of this course, learners will be able to:														
CO1	Identify IoT networking components with respect to OSI layer(K3).													
CO2	Construct IoT based sensor systems (K3).													
CO3	Make use of IoT protocols and software (K3).													
CO4	Examine the wireless technologies in IoT (K4).													
CO5	Demonstrate the ideas of IoT solutions (K2).													
<b>CO-PO Mapping</b>

2: Moderate (Medium)

3: Substantial (High)

<b>UNIT I</b>	<b>EVOLUTION OF IoT</b>	<b>9</b>
Review of computer communication concepts (OSI layers, components, packet communication, Networks, TCP-IP, subnetting, IPV4 addressing and challenges). IPV6 addressing. IoT architecture reference layer.		
<b>UNIT II</b>	<b>INTRODUCTION TO IoT COMPONENTS, PROTOCOLS AND SOFTWARES</b>	<b>9</b>
Characteristics IoT sensor nodes, Edge computer, cloud and peripheral cloud, single board computers, open-source hardware, Examples of IoT infrastructure, MQTT, UDP, MQTT brokers, publish subscribe modes, HTTP, COAP, XMPP and gateway protocols.		
<b>UNIT III</b>	<b>IoT POINT TO POINT COMMUNICATION TECHNOLOGIES</b>	<b>9</b>
IoT Communication Pattern, IoT protocol Architecture, Selection of Wireless technologies (6LoWPAN, Zigbee, WIFI, BT, BLE, SIG, NFC, LORA).		
<b>UNIT IV</b>	<b>IoT SECURITY</b>	<b>9</b>
Need for encryption, standard encryption protocol, light weight cryptography, Quadruple Trust Model for IoT-A - Threat Analysis and model for IoT-A, Cloud security.		
<b>UNIT V</b>	<b>DEVELOPING IoT SOLUTIONS</b>	<b>9</b>
Introduction to IoT tools, developing applications through IoT tools, Developing sensor-based application through embedded system platform and Artificial Intelligence (AI). Case studies: IoT for smart cities, health care, agriculture, Industrial IoT, Industry 4.0.		
<b>LIST OF EXPERIMENTS</b>		<b>15</b>
<ol style="list-style-type: none"> <li>1. Connect Arduino board and glow LED, Read analog and digital sensors such as relay, temperature, Humidity.</li> <li>2. Load the OS in Raspberry pi.</li> <li>3. Interface with Bluetooth and transmit sensor data to other node.</li> <li>4. Interface with Zigbee and transmit sensor data to other node.</li> <li>5. Mobile app to display cloud data. (cloudthink speak)</li> <li>6. Measure the light intensity in the room and output data to the web API.</li> <li>7. Control your home power outlet from anywhere using raspberry pi, zigbee (wifi/ble) and Arduino.</li> <li>8. Drinking water monitoring and analytics, consists of IoT device, cloud, and mobile and web app.</li> </ol>

**Prerequisite Course (s)**

Digital Signal processing

**Course Objective (s):** The purpose of learning this course is to:

- 1 Learn the basic concept of digital image processing
- 2 Develop new image processing algorithm for different domains
- 3 Develop hybrid techniques to solve problem in different applications

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

- CO1 Apply the mathematical transform necessary for image processing.
- CO2 Compute the enhancement techniques using spatial and frequency filters.
- CO3 Apply the restoration technique in the presence of noise and degradation.
- CO4 Apply the concept of various segmentation techniques and representation.
- CO5 Compute various compression and recognition methods.

**CO-PO Mapping**

CO (Avg)	3	2	1	1	-	-	1	-	-	-	-	1	3	1

1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

UNIT I	DIGITAL IMAGE FUNDAMENTALS	9
Elements of digital image processing systems– Elements of Visual perception–Image sampling and quantization–Basic Relationships between pixels- Color image fundamentals - RGB- HSI models - Image Transforms: Cosine–Hadamard-Walsh transforms.		
UNIT II	IMAGE ENHANCEMENT	9
Image enhancement in spatial domain– Gray level transformation techniques–Histogram Processing: Histogram Equalization, Histogram Matching– Spatial filters: Smoothing, Sharpening– Frequency Domain Filters: Smoothing and Sharpening–Homomorphic filters.		
UNIT III	IMAGE RESTORATION	9
Degradation model – Noise Models– Restoration in the presence of noise only: spatial filtering–Inverse and wiener filtering – Constrained least square filtering. Morphological Image Processing: Preliminaries – Erosion – Dilation – Duality – Opening – Closing.		
UNIT IV	IMAGE SEGMENTATION AND REPRESENTATION	9
Edge detection–Edge linking via Hough transform – Thresholding – Region based segmentation: Region growing, Region splitting and merging –Watershed segmentation algorithm. <b>Representation:</b> Boundary representation: Boundary segments, signatures, skeletons-Regional Descriptors: Topological feature, Texture		
UNIT V	IMAGE COMPRESSION AND RECOGNITION	9
Need for data compression– Error free compression: Huffman, Run Length Encoding, Arithmetic coding– Lossy Compression: Lossy predictive coding, Transform coding, Data loss due to compression in real time application – Lossless compression- Standards: JPEG and MPEG. Recognition: Patterns and Pattern classes – Recognition based on: matching, string matching.

<b>Prerequisite Course (s)</b>														
Digital Communication														
<b>Course Objective (s):</b> The purpose of learning this course is to														
1	Know the basics of the software defined radios													
2	Learn the design of the wireless networks based on the cognitive radios													
3	Understand the concepts of wireless networks and next generation networks													
<b>Course Outcome (s) (COs):</b> At end of this course, the learners should be able to														
CO1	Interpret the basics of the software defined radios. (K2)													
CO2	Compare the hardware and software architecture of software defined radio. (K2)													
CO3	Infer the rapid advances in Cognitive Radio Technologies. (K2)													
CO4	Summarize the function of cognition cycle and Architecture Maps. (K2)													
CO5	Apply the cognitive radio concept in next generation wireless networks. (K3)

3: Substantial (High)

<b>UNIT I</b>	<b>INTRODUCTION TO SOFTWARE DEFINED RADIO</b>	<b>9</b>
Definitions and potential benefits, software radio architecture evolution, technology tradeoffs and architecture implications		
<b>UNIT II</b>	<b>SDR ARCHITECTURE</b>	<b>9</b>
Essential functions of the software radio, basic SDR, hardware architecture, Computational processing resources, software architecture, top level component interfaces, interface topologies among plug and play modules		
<b>UNIT III</b>	<b>INTRODUCTION TO COGNITIVE RADIOS</b>	<b>9</b>
Making radio self-aware, cognitive techniques – position awareness, environment awareness in cognitive radios, optimization of radio resources, Artificial Intelligence Techniques		
<b>UNIT IV</b>	<b>COGNITIVE RADIO ARCHITECTURE</b>	<b>9</b>
Cognitive Radio - functions, components and design rules. Cognition cycle - orient, plan, decide and act phases, Inference Hierarchy, Architecture maps, Building the Cognitive Radio Architecture on Software defined Radio Architecture.		
<b>UNIT V</b>	<b>NEXT GENERATION WIRELESS NETWORKS</b>	<b>9</b>
The XG Network architecture, spectrum sensing, spectrum management, spectrum mobility, spectrum sharing, upper layer issues, cross – layer design.

E	18ECE013T	WIRELESS EMBEDDED SYSTEMS	3	0	0	3								
<b>Prerequisite Course (s)</b>														
Embedded Systems														
<b>Course Objective (s):</b> The purpose of learning this course is to:														
1	Describe about the generation of wireless systems.													
2	Impart concepts of security in wireless system.													
3	Understand the network requirement and about the network management of CAN message.													
4	Study the basic principle of CAN open standard network configuration and simulations.													
5	Identifying and implementing CAN open													
<b>Course Outcome (s) (COs):</b> At the end of this course, learners will be able to:														
CO1	Understand the different generation of wireless systems.													
CO2	Understand the concepts of security in wireless system.													
CO3	Know about requirement of Embedded network													
CO4	Understand the network configuration and simulations also about CAN.													
CO5	Understand implementing CAN open

<b>UNIT I</b>	<b>AN OVERVIEW OF WIRELESS SYSTEMS</b>	<b>9</b>
Introduction-First- and Second-Generation Cellular Systems-Cellular Communications from 1G to 3G-Road Map for higher Data Rate Capability in 3G-Wireless 4G Systems-Future Wireless Network-Standardization Activates for Cellular Systems		
<b>UNIT II</b>	<b>SECURITY IN WIRELESS SYSTEMS</b>	<b>9</b>
Introduction-Purpose of security-Privacy Requirements-Required Features for a secured Wireless Communications System-Methods of Providing Privacy and Security Wireless Systems-Wireless security and Standards-IEEE 802.11 Security-Security in North American Cellular/PCS Systems-Security in GSM,GPRS, and UMTS.		
<b>UNIT III</b>	<b>EMBEDDED NETWORK REQUIREMENTS</b>	<b>9</b>
Embedded networking-Communication in the Automation Pyramid-Terminology used in Embedded Networking-Code Requirements for Embedded Systems-Communication Requirements for Embedded Networking-Introduction to CAN open from the Application Level-The Object Dictionary Concept-Electronic Data Sheets		
<b>UNIT IV</b>	<b>CAN open STANDARD</b>	<b>9</b>
CAN open Object Dictionary-Data Types-Mandatory Entries-Reading the CAN open Specification-The Electronics Data Sheets(EDC) and Device Configuration Files (DCF)- Accessing the CAN open object Dictionary(OD)with Service Data Objects (SDO)-Handling Process Data with Process Data Objects-TPDO Transmit Trigger Options-SYNC Terminology-Network Management		
<b>UNIT V</b>	<b>IMPLEMENTING CAN open</b>	<b>9</b>
Communication Layout and Requirements-Comparison of Implementation Methods-CAN open Hardware Modules or Chips-CAN open Source Code-Code Configuration through Conditional Compilation –Object Dictionary-CAN open Conformance Test-Choosing an Implementation Path-Implementing CAN open Compliant Boot loaders.

Category	Course Code	Course Name	Hours / Week			C
			L	T	P	
E	18ECE014T	HIGH SPEED NETWORKS	3	0	0	3

**Prerequisite Course (s)**

Computer Networks

**Course Objective (s):** The purpose of learning this course is to:

1	Expose about the concept of ATM and Frame relay
2	Provide with an up-to-date survey and developments in High Speed networking
3	Enable the students to know the techniques involved to support real-time traffic and congestion control
4	Study the integrated and differentiated services with random early detection
5	Understand the protocols for QOS Support

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

CO1	Recognize various types of High-speed networks (K3)
CO2	Analyze the congestion control techniques for ATM and TCP networks (K3)
CO3	Identify the traffic management schemes (K3)
CO4	Discuss Integrated and Differentiated services (K3)
CO5	Summarize different protocols to achieve the required QOS (K3)

UNIT I	HIGH SPEED NETWORKS	9
Frame Relay Networks – Asynchronous transfer mode – ATM Protocol Architecture, ATM logical Connection, ATM Cell – ATM Service Categories – AAL, High Speed LANs: Fast Ethernet, Gigabit Ethernet, Fiber Channel – Wireless LANs: applications, requirements – Architecture of 802.11		
UNIT II	CONGESTION AND TRAFFIC MANAGEMENT	9
Queuing Analysis- Queuing Models – Single Server Queues – Effects of Congestion – Congestion Control – Traffic Management – Congestion Control in Packet Switching Networks – Frame Relay Congestion Control.		
UNIT III	TCP AND ATM CONGESTION CONTROL	9
TCP Flow control – TCP Congestion Control – Retransmission – Timer Management – Exponential RTO backoff – KARN's Algorithm – Window management – Performance of TCP over ATM. Traffic and Congestion control in ATM – Requirements – Attributes – Traffic Management Frame work, Traffic Control – ABR traffic Management – ABR rate control, RM cell formats, ABR Capacity allocations – GFR traffic management.		
UNIT IV	INTEGRATED AND DIFFERENTIATED SERVICES	9
Integrated Services Architecture – Approach, Components, Services- Queuing Discipline, FQ, PS, BRfq, GPS, WFQ – Random Early Detection, Differentiated Services		
UNIT V	PROTOCOLS FOR QOS SUPPORT	9
RSVP – Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms – Multiprotocol Label Switching – Operations, Label Stacking, Protocol details – RTP – Protocol Architecture, Data Transfer Protocol, RTCP

			L	T	P	
E	18ECE015T	<b>BIOMEDICAL INSTRUMENTATION</b>	3	0	0	3

**Prerequisite Course (s)**

Measurements and Instrumentation, Analog Electronics

**Course Objective (s):** The purpose of learning this course is to:

1	Gain knowledge about the various physiological parameters both electrical and non-electrical
2	Gain knowledge about the various bio-chemical and non-electrical parameter measurement
3	Gain knowledge about the methods of recording and also the method of transmitting these parameters.
4	Study about the various assist devices used in the hospitals.
5	Gain knowledge about equipment used for physical medicine and the various recently developed diagnostic and therapeutic techniques

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

CO1	Select the appropriate biopotential electrodes and the recording system for picking bioelectric signals (K3).
CO2	Examine the techniques of non-electrical parameters of our body (K4).
CO3	Choose the appropriate assistive device for the organ malfunction (K3)
CO4	Analyze the medical imaging techniques (K4).
CO5	Apply laser and nanotechnology concepts in biomedical instrumentation (K3).

<b>UNIT I</b>	<b>INTRODUCTION AND DISPLACEMENT MEASUREMENT</b>	<b>9</b>
Sensors - Basic requirements of a sensors- Classification of sensors- Static and Dynamic characteristics of sensors- Displacement Sensors- Linear and Rotary displacement sensors-Potentiometer, Capacitive and Inductive type displacement sensor- position sensors- Optical encoder, Photoelectric sensor, Hall Effect Sensor.		
<b>UNIT II</b>	<b>MEASUREMENT OF PROXIMITY, FORCE AND PRESSURE</b>	<b>9</b>
Eddy current proximity sensor- Inductive Proximity sensor- Capacitive Proximity sensor -Pneumatic Proximity sensors- Proximity Switches- Contact and Noncontact type – Strain Gauge – Diaphragm Pressure Sensor- Capsule Pressure sensors- Bellows Pressure Sensor- Bourdon tube pressure sensor- Piezoelectric Sensor- Tactile sensor.		
<b>UNIT III</b>	<b>MEASUREMENT OF VELOCITY, FLOW AND LEVEL</b>	<b>9</b>
Tachogenerator - Pyroelectric sensors - Ultrasonic sensor – Resistive sensor- Pitot tube – Orificeplate - flow nozzle- Venturi tubes – Rotameter- Electromagnetic flow meter. Float level sensor- Pressure level sensor- Variable capacitance sensor.		
<b>UNIT IV</b>	<b>MEASUREMENT OF TEMPERATURE, MOTION AND LIGHT SENSORS</b>	<b>9</b>
Thermocouples- Thermistors -Thermodiodes - Thermotransistors- BimetallicStrip- Resistance Temperature Detector- Infrared Thermography. Vibrometer and accelerometer- seismic accelerometer. Photoresistors -Photodiodes - Phototransistors- Photoconductors.		
<b>UNIT V</b>	<b>MICRO SENSORS AND ACTUATORS</b>	<b>9</b>
Micro Sensors: Principles and examples, Force and pressure micro sensors,position and speed micro sensors, acceleration micro sensors, chemical sensors,biosensors, temperature micro sensors and flow micro sensors. Micro Actuators: Actuation principle, shape memory effects-one way, two way and pseudo elasticity.Types of micro actuators- Electrostatic, Magnetic, Fluidic, Inverse piezo effect, other principles.Neumatic linear actuators,Hydraulic Actuators. Electrical actuators andFluid power system

Category	Course Code	Course Name	Hours / Week			C
			L	T	P	
E	18ECE017T	CONTROL SYSTEMS	3	0	0	3

**Prerequisite Course (s)**

Basics of Electrical and Electronics Engineering

**Course Objective (s):** The purpose of learning this course is to:

- 1 Introduce the elements of the control system and their modeling using various Techniques.
- 2 Introduce methods for analyzing the time response, the frequency response and the stability of systems
- 3 Introduce the state variable analysis method.

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

- CO1 Develop mathematical models of electrical and mechanical systems.
- CO2 Determine the time response of the systems subjected to standard test signals.
- CO3 Infer the concept of frequency domain specifications applied to systems.
- CO4 Analyze the performance and stability of system through time domain and frequency domain approach.
- CO5 Develop the lag, lead, lag-lead compensators for desired system performance.

1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

<b>UNIT I</b>	<b>CONTROL SYSTEM MODELLING</b>	<b>9</b>
Classification of control systems – definitions- open loop – closed loop systems - Electrical analogy of mechanical systems – Mathematical model of Mechanical and Electrical system - Transfer function - Block diagram reduction techniques – Signal flow graphs – Mason’s gain formula.		
<b>UNIT II</b>	<b>TIME RESPONSE ANALYSIS</b>	<b>9</b>
Time response – Time domain specifications – Types of test input – I and II order system response – Error coefficients – Static Error Constants - Generalized Error Coefficients - Steady state error – Effects of P, PI, PID Controllers.		
<b>UNIT III</b>	<b>FREQUENCY RESPONSE ANALYSIS</b>	<b>9</b>
Frequency response – Bode plot – Polar plot – Nichols plot - Determination of closed loop response from open loop response – Correlation between frequency domain and time domain specifications.		
<b>UNIT IV</b>	<b>STABILITY ANALYSIS</b>	<b>9</b>
Characteristic equation – Location of roots in S plane for stability – Routh Hurwitz criterion – Root locus Techniques – Root locus plot for stability analysis - Effect of pole, zero addition – Gain margin and phase margin – Nyquist stability criterion		
<b>UNIT V</b>	<b>COMPENSATOR AND STATE SPACE ANALYSIS</b>	<b>9</b>
Design of lead, lag and lead – lag compensators – design using bode plots. Concepts of state – state variable and state models – state equation – state transition matrix – solution of state equation.

**Prerequisite Course (s)**

Basic Electrical and Electronics Engineering, Analog Electronics, Digital Electronics

**Course Objective (s):** The purpose of learning this course is to:

- 1 Understand the basics requirement of PCB types, electronic packages and flow of PCB design.
- 2 Construct the layout design and assemble the components as per IPC standard.
- 3 Design in CAE and CAD Tools.
- 4 Calculate the current calculations in design to improve the performance.
- 5 Understand the manufacturing & Advanced Techniques in PCB.

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

- CO1 Utilize the Printed circuit board for design engineering (K3)
- CO2 Apply the rules and routing process in the design of PCB (K4)
- CO3 Categorize the electrical parameters in the design of PCB (K3)
- CO4 Identify the electrical parameters and design of PCB (K3)
- CO5 Examine the fabrication process of PCB Technique. (K4)

Curriculum and Syllabus | 2018 Regulation

<b>UNIT I</b>	<b>BASIS OF PRINTED CIRCUIT BOARD DESIGN ENGINEERING</b>	<b>9</b>
Printed Circuit Boards history & evolution- Technology trends- Physical characteristics of the PCB-vias concept Classes of PCB designs- Types of Printed Circuit Boards- Types of packages for electronic circuits-Concepts of Printed Circuit Board Design & Manufacturing- System specification- System block diagram- Partitioning system into PCBs- Determining PCB size- Building component libraries.		
<b>UNIT II</b>	<b>PCB DESIGN PROCESS</b>	<b>9</b>
Creating the schematic- Mechanical design parameters and enclosures- Mechanical aspects- Stack up build- Design flow formulation- Placing components on PCBs- Constraints set up-Power rules- Mixed Signal design rules- High-Speed rules- Consideration on timing & transmission lines effects- Routing PCB- Checking routed results - Generating manufacturing files – archiving design.		
<b>UNIT III</b>	<b>DESIGN TOOLS AND DESIGN PARAMETERS</b>	<b>9</b>
Setting up the PCB design process in CAE tools- Library, Schematic – CAD tools - Mechanical, Placement, Setting Constraint, Auto Routing, Manual Routing, Post Root Task, Output Generation. Design Rules Setting to compliance with Design & Manufacturability- Physical Rules, Spacing Rules, Electrical Rules. EDA tools.		
<b>UNIT IV</b>	<b>DESIGN PERFORMANCE</b>	<b>9</b>
Electrical Design Parameters- Current Calculations, Voltage Calculation, Impedance Calculations. Electrical Design Performance-Signal Integrity, Power Integrity, Thermal Management.		
<b>UNIT V</b>	<b>MANUFACTURING AND ADVANCED PCB TECHNIQUES</b>	<b>9</b>
Manufacturing related documentation- Planning for Fabrication & Assembly- Fabrication process- Assembly process Hand Soldering process, Wave soldering, Reflow soldering - Bare Board testing methods – Introduction to New Technologies-HDI technology, Flexi Rigid Boards, Embedded Actives and Passives.

**Prerequisite Course (s)**

Measurements and Instrumentation, Control Systems

**Course Objective (s):**

The purpose of learning this course is to:

- 1 Understand the fundamentals of Programmable Logic Controller (PLC)
- 2 Learn and understand the concepts of Addressing and Control
- 3 Design basic programming in PLC
- 4 Know about the basic in SCADA and DCS systems
- 5 Learn about the Industrial IOT

**Course Outcome (s) (COs):**

At the end of the course students should be able to:

- CO1 Construct architecture of PLC and develop ladder logic programs for logic gates implementation.
- CO2 Describe the concepts of Addressing and Control
- CO3 Develop the Knowledge on programming concepts of PLC and develop programs for real time applications
- CO4 Explore the function of SCADA and DCS
- CO5 Categorize the applying knowledge on Industrial IOT

<b>UNIT I</b>	<b>PROGRAMMABLE LOGIC CONTROLLER</b>	<b>9</b>
Evolution of PLC's -Components of PLC - Architecture of PLC-Discrete and Analog I/O modules - Programming languages -Ladder diagram -Programming timers and counters		
<b>UNIT II</b>	<b>ADDRESSING AND CONTROL</b>	<b>9</b>
Analog addressing, continuous process monitoring and control - Types of controllers -ON/OFF, Proportional, Derivative, Integral and PID controllers. Timer instructions, On delay timer, Off delay timer - Counter instructions, up counter, down counter		
<b>UNIT III</b>	<b>PLC PROGRAMMING</b>	<b>9</b>
Instructions in PLC - program control instructions, math instructions, sequencer instructions, Basic programs using switches and coils, Concept of latch, blinking and process repeat.		
<b>UNIT IV</b>	<b>DCS AND SCADA</b>	<b>9</b>
Evolution - DCS - Architectures – Comparison – Local control unit – Process interfacing issues. SCADA:Remote terminal units, Master station, Communication architectures.		
<b>UNIT V</b>	<b>INDUSTRIAL IOT</b>	<b>9</b>
AS interface - Devicenet- Industrial Ethernet - Introduction to OLE for process control - WSN technology - IOT- IIOT.

Category	Course Code	Course Name	Hours / Week			C								
			L	T	P									
E	18ECE021J	<b>FIBER OPTIC COMMUNICATION</b>	3	0	2	4								
<b>Prerequisite Course (s)</b>														
Analog communication, Digital communication														
<b>Course Objective (s):</b> The purpose of learning this course is to:														
1	Study about the various optical fiber modes, configuration of optical fibers													
2	Analyze the signal degradation factors coupled with optical fiber													
3	Learn the various optical source and photonic crystal in the optical communication system													
4	Examine the optical receivers and their uses													
5	Discuss about digital transmission and its related parameters on system performance													
<b>Course Outcome (s) (COs):</b> At the end of this course, learners will be able to:														
CO1	Experiment with the basic elements in optical fibers, different modes and configurations. (K3)													
CO2	Make use of the signal degradation factors in optical fibers (K3)													
CO3	Categorize the characteristics of Optical Sources (K4)													
CO4	Identify the error sources in optical detectors (K3)													
CO5	Apply the digital transmission system in Optical Communication (K3)													
<b>CO-PO Mapping</b>														
COs	POs												PSOs

CO2	3	3	1		2				3				3	2
CO3	3	3	1		2				3				3	2
CO4	3	3	1		2			1	3	1			3	2
CO5	2	3			2			1	3	1			3	2
CO (Avg)	2.8	3	1	1	2			1	3	1			3	2

1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

<b>UNIT I</b>	<b>INTRODUCTION TO OPTICAL FIBERS</b>	<b>9</b>
<p>Elements of an Optical fiber Transmission link - Ray theory transmission - Total internal reflection, Acceptance angle, Numerical Aperture, Optical Fiber Modes and Configurations- skew rays-Mode theory of circular wave guide - Overview of Modes, Key Modal Concepts-Linearly Polarized Modes -Single Mode Fibers, Graded Index fiber structure</p>		
<b>UNIT II</b>	<b>SIGNAL DEGRADATION IN OPTICAL FIBERS</b>	<b>9</b>
<p>Attenuation -Absorption losses, Scattering losses, Bending Losses, Core and Cladding losses, Signal Distortion in Optical Wave guides-Information Capacity determination-Group Delay-Material Dispersion, Wave guide Dispersion, ISI , Signal distortion in SM fibers-Polarization Mode dispersion, Intermodal dispersion, Pulse Broadening in GI fibers-Mode Coupling Design Optimization of SM fibers, RI profile and cut-off wavelength-Mode field Diameter</p>		
<b>UNIT III</b>	<b>OPTICAL SOURCES AND PHOTONIC CRYSTAL</b>	<b>9</b>
<p>LED's- Modulation Of LED, Quantum efficiency and LED power, LASER Diodes: Modulation of LASER diodes -Rate equations -External Quantum efficiency -Temperature effects -Power Launching and Coupling: Source to fiber power launching - Lensing Schemes for Coupling improvement - Fiber Optical Sources and Coupling - Fibre- to-Fibre joints - Fibersplicing. Principle of Photonic crystal, Guidance mechanism: Index guiding PCF, Photonic band gap PCF, All solid photonic Bandgap PCF, Hybrid PCF, Applications Of PCF in sensing.</p>		
<b>UNIT IV</b>	<b>FIBER OPTICAL RECEIVERS</b>	<b>9</b>
<p>PIN Photo detector -Schottky -Barrier Photodiodes -Avalanche Photodiodes - Photo detector noise - Detector response time - Avalanche multiplication of Noise-Temperature effects on Photo Detectors- Phototransistors -Fundamental Receiver operation-preamplifiers-Error Sources-Receiver configuration -Probability of error-Quantum limit</p>		
<b>UNIT V</b>	<b>DIGITAL TRANSMISSION SYSTEMS</b>	<b>9</b>
<p>Point to point link systems considerations -Link Power budget-Rise time budget-Noise effects on system performance - Operational principles of Wavelength division multiplexing (WDM)-Solitons -Erbium doped fiber Amplifier(EDFA's)-Basic on concepts of SDH Network-application of OFC-CATV.</p>		

**LIST OF EXPERIMENTS**

1. Measurement of Numerical Aperture and Coupling efficiency (Angular and Lateral) in Optical Fiber.
2. Attenuation losses and Bending losses in single mode optical fiber.
3. DC Characteristics of LED Diode.
4. DC Characteristics of LASER Diode.
5. DC Characteristics of PIN Diode.
6. Study of Data Communication using Single Mode Fiber Optic System.
7. Pulse Width Modulation and Demodulation using fiber optic System.
8. Transmission of different wavelengths using WDM and De-Multiplexing.
9. Transmission and Reception of TDM signals using fiber optic System.
10. Eye pattern measurement.

E	18ECE022T	ROBOTICS & AUTOMATION	3	0	0	3								
<b>Prerequisite Course (s)</b>														
Control Systems														
<b>Course Objective (s):</b> The purpose of learning this course is to:														
1	Understand the basic concepts of Robots and various Grippers.													
2	Learn the basic knowledge in power sources and types of sensors.													
3	Learn about the transformations, Forward and Inverse Kinematics of Robots.													
4	Study the differential motion techniques and Velocities.													
5	Learn about various motion planning techniques and the trajectory Planning.													
<b>Course Outcome (s) (COs):</b> At the end of this course, learners will be able to:														
CO1	Gain basic knowledge about robots and its associated grippers.													
CO2	Examine different sensors and the choice of different sources of drives.													
CO3	Understanding the basics of Kinematics of Robots.													
CO4	Describe the Differential concepts of motion and velocities													
CO5	Explain Trajectory planning techniques along with the control architectures adopted for robot motion planning.

1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

<b>UNIT I</b>	<b>BASIC CONCEPTS</b>	<b>9</b>
History of robots, Classification of robots, Present status and future trends. Basic components of robotic system. Basic terminology- Accuracy, Repeatability, Resolution, Degree of freedom. Mechanisms and transmission, End effectors, Grippers-different methods of gripping, Mechanical Grippers-Slider crank mechanism, Screw type, Rotary actuators, Cam type gripper, Magnetic grippers, Vacuum grippers, Air operated grippers; Specifications of robot.		
<b>UNIT II</b>	<b>POWER SOURCES AND SENSORS</b>	<b>9</b>
Hydraulic, pneumatic and electric drives – determination of HP of motor and gearing ratio – variable speed arrangements – path determination – micro machines in robotics – machine vision – ranging – laser – acoustic – magnetic, fiber optic and tactile sensors- inertial, thermal, chemical, biosensor, other common sensors		
<b>UNIT III</b>	<b>KINEMATICS OF ROBOTS</b>	<b>9</b>
Robots as Mechanisms-Matrix Representation-Representation of Transformations-Inverse of Transformation Matrices-Forward and Inverse Kinematics of Robots-Denavit Hartenberg representation of Forward Kinematic Equations of Robots-Degeneracy and Dexterity-		
<b>UNIT IV</b>	<b>DIFFERENTIAL MOTIONS AND VELOCITIES</b>	<b>9</b>
Differential relationships – Jacobian – Differential Motions of a frame – Interpretation of the differential change – Calculation of the Jacobians – Inverse Jacobians –Dynamic analysis and Forces – Lagrangian Mechanics-Effective Moments of Inertia-Dynamic Equations for Multiple-DOF Robots-Static Force Analysis of Robots		
<b>UNIT V</b>	<b>TRAJECTORY PLANNING AND MOTION CONTROL</b>	<b>9</b>
Basics of Trajectory planning – Joint Space Trajectory Planning – Cartesian Space Trajectories -Motion Control system basic components – System Dynamics -Inverse Laplace transform – Block diagram algebra – Characteristics of first order and second order functions.

<b>UNIT I</b>	<b>WIRELESS LOCAL AREA NETWORKS</b>	<b>9</b>
Introduction to Wireless LANs – WLAN Equipment, Topologies, Technologies, IEEE 802.11 WLAN –Architecture and Services, Physical Layer- MAC Sub Layer –MAC Management Sub Layer, Other IEEE 802.11 Standards, HIPERLAN, WiMAX.		
<b>UNIT II</b>	<b>WIRELESS WANS</b>	<b>9</b>
GSM and TDMA technology: Introduction-Mechanism to support a mobile Environment-Communications in the infrastructure, CDMA Technology, IS-95, IMT -2000, Mobile Data Networks: Data Oriented CDPD Networks-GPRS and Higher Data Rates-Mobile application Protocol.		
<b>UNIT III</b>	<b>MOBILE NETWORK LAYER</b>	<b>9</b>
Introduction – Mobile IP: IP packet delivery, Agent discovery, tunneling and encapsulation, Optimization-IPV6, mobile ad-hoc network: Routing, Destination Sequence distance vector, Dynamic source routing.		
<b>UNIT IV</b>	<b>MOBILE TRANSPORT LAYER</b>	<b>9</b>
TCP enhancements for wireless protocols – Traditional TCP: Congestion control, fast retransmit/fast recovery, Implications of mobility – Classical TCP improvements: Indirect TCP, Snooping TCP, Mobile TCP, Transaction oriented TCP – TCP over 2.5/3G wireless networks, Performance enhancing proxies.		
<b>UNIT V</b>	<b>4G NETWORKS</b>	<b>9</b>
Introduction – 4G vision – 4G features and challenges – Applications of 4G – 4G Technologies: Multicarrier Modulation, Smart antenna techniques, OFDM-MIMO systems, Adaptive Modulation and coding with time slot scheduler, Cognitive Radio, Software defined Radio (SDR).

**Prerequisite Course (s)**

Fiber Optic Communication

**Course Objective (s):** The purpose of learning this course is to:

- 1 Make students familiar with fundamentals of Optical networks
- 2 Choose system (SONET,/MDH) according to the complexity and select WDM routing architecture
- 3 Identify the wavelength routing networks
- 4 Identify the Network design and management

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

- CO1 Identify with various optical system components.
- CO2 Realize the concept of optical network architecture.
- CO3 Explain the basics of wavelength routing techniques
- CO4 Analyze the photonic packet switching and access networks
- CO5 Gain knowledge of network design management.

E	18ECE026T	HIGH PERFORMANCE COMMUNICATION NETWORKS			3	0	0	3						
<b>Prerequisite Course (s)</b>														
Computer Networks, High Speed Networks														
<b>Course Objective (s):</b> The purpose of learning this course is to:														
1	Understand the history of Communication Networks and LAN Switching Technologies													
2	Study basic Concept of Network services and architectures													
3	Known the Internet Concepts and TCP/IP Protocols													
4	Perform the Packet Switching Architectures													
5	Understand the Control of Networks													
<b>Course Outcome (s) (COs):</b> At the end of this course, learners will be able to:														
CO1	Gain about the LAN Switching Technologies													
CO2	Make services and Layered architectures													
CO3	Carry out the Internet and TCP/IP Protocols													
CO4	Gained about the Packet Switching Architectures													
CO5	Understand about the knowledge Control of network

3: Substantial (High)

<b>UNIT I</b>	<b>HISTORY OF COMMUNICATION NETWORKS AND LAN SWITCHING TECHNOLOGY</b>	<b>9</b>
History of Communication Networks, Networking principles, Future networks Internet, Pure TAM Network, Cable Network, and Wireless. Switch Forwarding Techniques, Switch Path Control, LAN Switching, Cut through Forwarding, Store and forward.		
<b>UNIT II</b>	<b>NETWORK SERVICES AND LAYERED ARCHITECTURE</b>	<b>9</b>
Applications, Traffic characterization and quality of services, Network services, High performance networks, Network Elements., Layered applications, Open data network model, Network architectures, Network bottlenecks.		
<b>UNIT III</b>	<b>INTERNET AND TCP/IP NETWORKS</b>	<b>9</b>
Multicast IP, Mobile IP, TCP and UDP, Applications, FTP, SMTP. Internet success and limitations, Performance of TCP/IP Networks, Performance of circuit switched networks.		
<b>UNIT IV</b>	<b>PACKET SWITCHING ARCHITECTURES</b>	<b>9</b>
Architectures of Internet Switches and Routers- Buffer less and buffered Crossbar switches, Multi-stage switching, Optical Packet switching; Switching fabric on a chip; Internally buffered Crossbars.		
<b>UNIT V</b>	<b>CONTROL OF NETWORKS</b>	<b>9</b>
Control of networks, Objectives and methods of control, Circuit switched networks, Datagram Networks Network economics, Derived demand for network services, ISPs, subscriber demand model, Empirical model.		
<b>Text Book (s)</b>		
1	Jean Walrand, Pravin Varaiya High Performance Communication Networks, Second Edition, Morgan Kaufmann Publishers

Regulation 2018		Semester __	Total Hours			45
Category	Course Code	Course Name	Hours / Week			C
			L	T	P	
E	18ECE027T	LORA WAN	3	0	0	3

**Prerequisite Course (s)**

Computer Networks

**Course Objective (s):**The purpose of learning this course is:

1	Understand the Basics of LoRaWAN.
2	Applying the concepts of IOT in LoRa and LoRaWAN.
3	Analyzing the Long Range & Low Power Networks for the Internet of Things and The LoRaWAN Protocol.
4	Understanding the concepts of Formal security analysis of LoRaWAN.
5	Analyze the Testing and measurements of LORA.

**Course Outcome (s) (COs):**At the end of this course, learners will be able to:

CO1	Study and Understanding about IoT Networks with LoRaWAN.
CO2	Apply IoT concepts in LoRa and MQTT protocol.
CO3	Analyze the Long Range & Low Power Networks using LoR WAN Protocol.
CO4	Understand the Formal security analysis of LoRaWAN.
CO5	Analyze the testing of LORA.

**CO-PO Mapping**

COs	POs												PSOs

3: Substantial (High)

<b>UNIT I</b>	<b>IOT NETWORKS WITH LORAWAN</b>	<b>9</b>
What is LoRa(WAN) - Over The Air - Hardware Components - Software libraries for LoRa and LoRaWAN -LoRa Examples for Arduino - LoRa Examples for ARM mbed OS, SemtechLoRaMAC - Low Power Optimization - Improving the operating range.		
<b>UNIT II</b>	<b>IOT IN LORA AND LORAWAN</b>	<b>9</b>
Introduction to LoRa and LoRaWAN – Connecting with IOT servers using MQTT – Building a LoRa Gateway – obtaining and preparing hardware- connecting with IOT servers using RESTful API.		
<b>UNIT III</b>	<b>LONG RANGE &amp; LOW POWER NETWORKS FOR THE INTERNET OF THINGS</b>	<b>9</b>
Introduction to Related Work - IEEE802.15.4 - Bluetooth/LE- IEEE 802.11 ah- Sigfox- LoRa Overview - The LoRa Physical Layer - The LoRaWAN Protocol - LoRaWAN Analysis.		
<b>UNIT IV</b>	<b>FORMAL SECURITY ANALYSIS OF LORAWAN</b>	<b>9</b>
Introduction-LoRaWAN –LoRaWANv1.0 – LoRaWANv1.1 -Known attacks to LoRa WAN - Security protocol analysis and Scyther - Security verification results - Open security challenges with LoRa WAN v1.1 - Cryptographic primitives - Key preloading - Infrastructure trust.		
<b>UNIT V</b>	<b>TESTING ANALYSIS OF LORA</b>	<b>9</b>
Introduction - Materials and methods - Low power air velocity measurement -Radio performance criteria- Applied radio modules - Air velocity measurements.		
<b>Text Book (s)</b>		
1	"IoT Networks with LoRaWAN" Authors by Bernd Wiegmann.

Category	Course Code	Course Name	Hours / Week			C								
			L	T	P									
E	18ECE028T	ADHOC AND SENSOR NETWORKS	3	0	0	3								
<b>Prerequisite Course (s)</b>														
Computer Networks														
<b>Course Objective (s):</b> The purpose of learning this course is to:														
1	Achieve the challenges of emerging trends in Ad hoc network													
2	Categorize the MAC, Routing protocols for Ad hoc networks													
3	Design and develop Routing algorithms													
4	Obtain the concept of networking sensors and architecture													
5	Analyze the sensor networking database and tools in Ad hoc Networks													
<b>Course Outcome (s) (COs):</b> At the end of this course, learners will be able to:														
CO1	Solve the MAC issues in Ad hoc networks (K3)													
CO2	Build the routing table in various routing protocols (K3)													
CO3	Apply the QoS and energy management in Ad hoc networks (K3)													
CO4	Develop the concept of networking sensors and architecture (K3)													
CO5	Utilize the sensor networking database and tools in Ad hoc Networks (K3)													
<b>CO-PO Mapping</b>

1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

<b>UNIT I</b>	<b>MAC PROTOCOLS</b>	<b>9</b>
Cellular and Ad Hoc wireless networks – issues in adhoc wireless networks - issues in designing a MAC Protocol – design goals – contention-based protocols – contention-based protocols with reservation mechanism - contention based protocols with scheduling mechanism – MAC protocols that use directional antennas – multichannel MAC protocol		
<b>UNIT II</b>	<b>ROUTING PROTOCOLS</b>	<b>9</b>
Issues in designing a routing protocol – Routing protocols: Table driven – On-demand – hybrid – hierarchical – power aware – Routing protocols with efficient flooding mechanisms		
<b>UNIT III</b>	<b>QOS AND ENERGY MANAGEMENT</b>	<b>9</b>
Classifications of QoS solutions – MAC layer solutions – Network layer solutions – QoS frameworks – Need for energy management – classification of energy management schemes – battery management schemes – transmission power management schemes – system power management schemes		
<b>UNIT IV</b>	<b>NETWORKING SENSORS AND ARCHITECTURE</b>	<b>9</b>
Unique Constraints and Challenges - Canonical Problem: Localization and Tracking : A Tracking Scenario - Problem Formulation- Distributed Representation and Inference of States -Tracking Multiple Objects-Sensor Models - Networking Sensors: Medium Access Control-Geographic, Energy-Aware Routing-Attribute based Routing - Infrastructure Establishment: Topology Control-Clustering-Time Synchronization-Localization and Localization Services		
<b>UNIT V</b>	<b>SENSOR NETWORKING DATABASE AND TOOLS</b>	<b>9</b>
Sensor Database Challenges-Querying the Physical Environment-Query Interfaces-High-Level Database Organization-In-Network Aggregation-Data-Centric Storage-Temporal Data-Sensor Node Hardware-Sensor Network Programming Challenges-Node-Level Software Platforms-Node-Level Simulators-Programming Beyond Individual Nodes: State-Centric Programming

			L	T	P	
E	18ECE029T	SATELLITE COMMUNICATION	3	0	0	3

**Prerequisite Course (s)**

Digital Communication, Antennas and Wave Propagation

**Course Objective (s):**The purpose of learning this course is to:

- 1 Know the basics of satellite communication.
- 2 Understand the concepts of orbital mechanics, multiple access techniques and spacelinks.
- 3 Gain knowledge on spacecraft subsystems, earth stations and satellite platform applications.

**Course Outcome (s) (COs):**At the end of this course, learners will be able to:

- CO1 Identify the spacecraft sub system used in satellite communication
- CO2 Analyze various subsystems of spacecraft
- CO3 Design and analyze the characteristics satellite links
- CO4 Analyze the various medium access techniques
- CO5 Apply different types of broadcasting/military applications and multimedia services

**CO-PO Mapping**

1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

<b>UNIT I</b>	<b>ORBITAL MECHANICS</b>	<b>9</b>
Kepler's laws of motion, Orbits, Orbit Equations, Orbit Description, Locating the Satellite in the Orbit and with Respect to Earth, Orbital Elements-Look Angle Determination and Visibility - Orbital Perturbations, Orbit Determination, Launch Vehicles, Orbital Effects in Communication System - Performance Attitude control; Satellite launch vehicles. Spectrum allocations for satellite systems.		
<b>UNIT II</b>	<b>SPACECRAFT SUB SYSTEMS AND EARTH STATION</b>	<b>9</b>
Spacecraft Subsystems, Altitude and Orbit Control, Telemetry and Tracking, Power Systems, Communication Subsystems, Transponders, Antennas, Equipment Reliability, Earth Stations, Example of payloads of operating and planned systems.		
<b>UNIT III</b>	<b>SPACE LINKS</b>	<b>9</b>
The Space Link, Satellite Link Design - Satellite uplink -down link power Budget, Basic Transmission Theory, System Noise Temp, G/T Ratio, Noise Figure, Downlink Design, Design of Satellite Links for Specified C/N - Microwave Propagation on Satellite-Earth Paths. Interference between satellite circuits, Energy Dispersal, propagation characteristics of fixed and mobile satellite links.		
<b>UNIT IV</b>	<b>MULTIPLE ACCESS TECHNIQUES AND NETWORK ASPECTS</b>	<b>9</b>
Single access vs. multiple accesses (MA). Classical MA techniques: FDMA, TDMA. Single channel per carrier (SCPC) access - Code division multiple access (CDMA). Demand assignment techniques. Mobile satellite network design, ATM via satellite. TCP/IP via satellite - Call control, handover and call set up procedures. Hybrid satellite-terrestrial networks.		
<b>UNIT V</b>	<b>SERVICES AND APPLICATIONS</b>	<b>9</b>
Fixed and mobile services - Multimedia satellite services - Advanced applications based on satellite platforms - INTELSAT series - INSAT, VSAT, Remote Sensing - Mobile satellite service: GSM. GPS, INMARSAT, Navigation System, Direct to Home service (DTH), Special services, E-mail, Video conferencing and Internet connectivity.

Category	Course Code	Course Name	Hours / Week			C
			L	T	P	
E	18ECE030T	RADAR AND NAVIGATIONAL AIDS	3	0	0	3

**Prerequisite Course (s)**

Digital Communication, Antenna and wave Propagation, Electromagnetic wave guides.

**Course Objective (s):** The purpose of learning this course is to:

1	Apply the Doppler principle to radars and hence detect moving targets, cluster, to understand tracking radars.
2	Refresh the principles of antennas and propagation as related to radars and to study of Radar transmitters and receivers.
3	Aware of principles of navigation, landing aids.

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

CO1	Illustrate the principles of radar
CO2	Examine the operation of Moving Target Indicator and pulse Doppler radar
CO3	Demonstrate the building blocks of Radar transceiver
CO4	Explain concepts of navigational system and Compare different navigation systems
CO5	Discuss instrument landing system and distance measuring equipment

**CO-PO Mapping**

<b>UNIT I</b>	<b>INTRODUCTION TO RADAR</b>	<b>9</b>
<p>RADAR principle, RADAR Block Diagram, Radar frequencies, Radar equation, Detection of signals in noise, Integration of Radar Pulses- Radar Cross Section of Targets- Radar cross Section Fluctuations- Transmitter Power- Pulse Repetition Frequency- Antenna Parameters - System losses.</p>		
<b>UNIT II</b>	<b>MTI,PULSE DOPPLER RADAR AND TRACKING RADAR</b>	<b>9</b>
<p>Introduction to Doppler and Moving Target Indicator (MTI) Radar, Delay Line Cancellers, Staggered Pulse Repetition Frequencies, Digital MTI Processing , Moving Target Detector, Limitations to MTI Performance, MTI from a Moving Platform. Pulse Doppler Radar, Tracking with Radar, Monopulse Tracking, Conical Scan and Sequential Lobing, Limitations to Tracking Accuracy, Comparison of Trackers, Tracking with Surveillance Radars (ADT).</p>		
<b>UNIT III</b>	<b>DETECTION OF SIGNAL</b>	<b>9</b>
<p>Introduction – Detection Criteria, Automatic Detector - Constant False Alarm Rate Receivers - Radar operator – Propagation Radar Waves - Atmospheric Refraction -Standard propagation - Nonstandard Propagation, Radar Antenna – Reflector Antennas - Electronically Steered Phased Array Antennas - Phase Shifters – Frequency Scan Arrays. Radar Transmitters -Linear Beam Power Tubes - Solid State RF Power Sources - Magnetron Radar Receivers - Receiver noise Figure -Superheterodyne Receiver - Duplexers and Receiver Protectors- Radar Displays.</p>		
<b>UNIT IV</b>	<b>NAVIGATIONAL SYSTEMS</b>	<b>9</b>
<p>Four Methods of Navigation ,Radio Direction Finding - Loop Antenna - Loop Input Circuits - Aural Null Direction Finder -Goniometer - Errors in Direction Finding - Adcock Direction Finders - Direction Finding at Very High Frequencies -Automatic Direction Finders - Commutated Aerial Direction Finder - Range and Accuracy of Direction Finders - LF/MF Fourcourse Radio Range - VHF Omni Directional Range(VOR) - VOR Receiving Equipment - Range and Accuracy of VOR -Hyperbolic Systems of Navigation (Loran and Decca) – Loran A Equipment - Range and precision of Standard Loran – LoranC - Decca Navigation System - Decca Receivers - Range and Accuracy of Decca - Omega System</p>		
<b>UNIT V</b>	<b>SATELLITE NAVIGATION SYSTEM</b>	<b>9</b>
<p>Distance Measuring Equipment - Operation of DME - TACAN - TACAN Equipment - Instrument Landing System (ILS) -Ground Controlled Approach (GCA) System - Microwave Landing System (MLS) Doppler Navigation - Doppler Effect -Beam Configurations -Doppler Frequency Equations - Track Stabilization - Doppler Spectrum - Components of the Doppler Navigation System - Doppler range Equation - Accuracy of Doppler Navigation Systems, Inertial Navigation - Principles of Operation - Navigation Over the Earth – Components of an Inertial Navigation System - Earth Coordinate Mechanization -Strapped-Down Systems - Accuracy of Inertial Navigation Systems-The Transit System - Navstar Global Positioning System(GPS).</p>

**Prerequisite Course (s)**

Digital Signal Processing and Wireless Communication

**Course Objective (s):**The purpose of learning this course is to:

1	Acquire the knowledge on various modulation and coding schemes for space-time Wireless Communications.
2	Understand transmission and decoding techniques associated with Wireless Communications.
3	Understand multiple-antenna systems such as multiple-input multiple-output (MIMO) and Space-Time Codes.

**Course Outcome (s) (COs):**At the end of this course, learners will be able to:

CO1	Describe and categorize various wireless MIMO channel models.
CO2	Analyze the performance of various MIMO channel models.
CO3	Prioritize different spatial diversity techniques.
CO4	Explain various ST coding techniques and design optimum receivers for MIMO systems.
CO5	Analyze and evaluate advanced signal processing techniques for wireless communications.

**CO-PO Mapping**

**Prerequisite Course (s)**

Digital Image Processing

**Course Objective (s):** The purpose of learning this course is to:

- 1 Explain the need for Multimedia compression technique and the different types of data
- 2 Introduce methods for the generation of these codes and their decoding techniques
- 3 Study the basics of audio compression technique and the Vocoders
- 4 Have a detailed knowledge of compression and decompression techniques
- 5 Introduce the concepts of multimedia communication

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

- CO1 Describe various multimedia components
- CO2 Describe Contour based compression and Motion estimation techniques
- CO3 Describe audio compression and different coding techniques
- CO4 Describe the video compression techniques and MPEG standards
- CO5 Apply the compression concepts in multimedia communication.

<b>UNIT I</b>	<b>BASIC COMPRESSION TECHNIQUES</b>	<b>9</b>
Approaches to Image Compression - Compression Techniques - Lossless Compression - Lossy Compression - Differential Lossless Compression - JPEG - JPEG-LS - JBIG - Wavelet-Based Compression - Multi resolution Decomposition- WSQ, Fingerprint Compression.		
<b>UNIT II</b>	<b>TEXT AND IMAGE COMPRESSION</b>	<b>9</b>
Compression principles-source encoders and destination encoders-lossless and lossy compression-entropy encoding - source encoding -text compression - static Huffman coding dynamic coding -arithmetic coding -Lempel Ziv-Welsh Compression-image compression.		
<b>UNIT III</b>	<b>MPEG AUDIO COMPRESSION</b>	<b>9</b>
Psychoacoustics - MPEG Audio - MPEG-7 Audio - Basic sub-band coding - Application to speech coding - G.722 - Application to audio coding - MPEG audio, progressive encoding for audio - Silence compression, speech compression techniques - Formant and CELP Vocoders.		
<b>UNIT IV</b>	<b>VIDEO COMPRESSION</b>	<b>9</b>
Video compression techniques and standards - MPEG Video Coding I: MPEG - 1 and 2 - MPEG Video Coding II: MPEG - 4 and 7 - Motion estimation and compensation techniques - H.261 Standard - DVI technology - PLV performance - DVI real time compression - Packet Video		
<b>UNIT V</b>	<b>MULTIMEDIA NETWORK COMMUNICATIONS AND APPLICATIONS</b>	<b>9</b>
Quality of Multimedia Data Transmission- Multimedia over IP - Multimedia over ATM Networks - Transport of MPEG-4 - Media-on-Demand (MOD) - C-BIRD - A Case Study.

**Prerequisite Course (s)**

Physics, Basic Electrical and Electronics Engineering

**Course Objective (s):** The purpose of learning this course is to:

- 1 Provide the students with knowledge and the basic understanding of nanotechnology.
- 2 Enhance the knowledge of Nanoparticles
- 3 Know about Nanostructures and its effects
- 4 Study about Spectroscopy and its applications
- 5 Get an idea about Biological Materials, MEMS, NEMS

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

- CO1 Know what it takes to have a career in nanotechnology
- CO2 Understand the need to increase Nanotechnology awareness
- CO3 Understand the definition of Nanotechnology
- CO4 Know the processing of Nano particles and Nano materials
- CO5 Know the application of Nanotechnology and nano materials

**Prerequisite Course (s)**

Measurements and Instrumentation, Analog Integrated Circuits

**Course Objective (s):** The purpose of learning this course is to:

1	Understand the concepts of micro electromechanical devices
2	Understand the concepts of micro sensors and micro actuators
3	Understand the fabrication process of Microsystems
4	Study about design concepts of micro systems machining
5	Know the Design flow and applications.

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

CO1	Illustrate the operation of micro devices, micro systems and their applications.
CO2	Design the micro devices, micro systems using the MEMS fabrication process.
CO3	Analyse typical materials used for fabrication of micro systems.
CO4	Apply the principles of standard micro fabrication techniques in manufacturing
CO5	Analyse the challenges in the design and fabrication of Micro systems.

**Course Objective (s):**

- Utilize the appropriate and efficient SQL select operations to organize and retrieve the data from the databases
- Assess the data by the constraints and relational algebra operations.
- Decide database storage and accessing techniques
- Utilize NoSQL data modeling from application specific queries
- Provide scalability and flexibility along with a powerful querying system.

**Course Outcome (s) (COs):**

- CO1 Apply the database concepts, structures and query language to maintain the data (K3)
- CO2 Develop Relational Algebra and Relational Calculus queries (K3)
- CO3 Experiment with indexing methods in databases (K3)
- CO4 Identify the differences between the relational and NoSQL databases. (K3)
- CO5 Make use of mongoDB aggregation framework, and mongoDB with Python (K3)

Prerequisite Course (s)

Course Objective (s): The purpose of learning this course is to:

- Empower students with overall Professional and Technical skills required to solve a real world problem.
- Mentor the students to approach a solution through various stages of Ideation, Research, Design Thinking, workflows, architecture and building a prototype in keeping with the end-user and client needs.
- Provide experiential learning to enhance the Entrepreneurship and employability skills of the students.

Course Outcome (s) (COs): At the end of this course, learners will be able to:

- CO1 Upskill in emerging technologies and apply to real industry-level use cases
- CO2 Understand agile development process
- CO3 Develop career readiness competencies, Team Skills / Leadership qualities
- CO4 Develop Time management, Project management skills and Communication Skills
- CO5 Use Critical Thinking for Innovative Problem Solving
- CO6 Develop entrepreneurship skills to independently work on products

Activity Name	Activity Description	Time (weeks)
Choosing a Project	Selecting a project from the list of projects categorized various technologies & business domains	2
Team Formation	Students shall form a team of 4 Members before enrolling to a project. Team members shall distribute the project activities among themselves.	1
Hands on Training	Students will be provided with hands-on training on selected technology in which they are going to develop the project.	2
Project Development	Project shall be developed in agile mode. The status of the project shall be updated to the mentors via appropriate platform	6
Code submission, Project Doc and Demo	Project deliverables must include the working code, project document and demonstration video. All the project deliverables are to be uploaded to cloud based repository such as GitHub.	3
Mentor Review and Approval	Mentor will be reviewing the project deliverables as per the milestone schedule and the feedback will be provided to the team.	1
Evaluation and scoring	Evaluators will be assigned to the team to evaluate the project deliverables, and the scoring will be provided based on the evaluation metrics	1
<b>TOTAL</b>	<b>16 WEEKS</b>	

**AMENDMENT IN RESPECTIVE REGULATIONS:**

1. Course is offered in the
  - 6<sup>th</sup>/7<sup>th</sup> semesters of UG programmes
2. This is an EEC category course offered as an elective under the type, "Experiential Project Based Learning".
3. **Evaluation of Experiential Project Based Learning:**
  - **Project Review & Scoring:** Evaluator accesses the project deliverables, reviews the work done by the team and assigns the score for defined metrics.
  - **Project Status Review:** Mentor reviews the deliverables submitted by student teams and shares his/her comments. Mentor ensures the timely completion of project.
  - The evaluation shall be carried out as per the metrics given in Table 2.
4. If a student takes a break and rejoins the programme at a later point in time in a semester other than the prescribed semesters identified for the course, he/she is permitted to opt for a professional elective in lieu of this course.

**Course Assessment scheme:** Assessed through **Continuous assessment mode**

\*\*\*\*\*

**Passing Criteria:**

The passing requirement for the courses of the type 'Experiential Project Based Learning' falling under the category of EEC is 50% of the continuous assessment marks only.

**Course Objective (s):** The purpose of learning this course is to:

- 1 Understand the functional and architectural characteristics of a PIC microcontroller, memory devices, and key peripheral devices
- 2 Know about MSP430 architecture, programming and serial interfaces
- 3 Study the overview of Embedded System Architecture
- 4 Know various embedded communication protocols.

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

- CO1 Describe the architecture and memory organization of the PIC.
- CO2 Discuss about the interrupts and timers
- CO3 Identify the fundamental need of Low power embedded system
- CO4 Gain knowledge of hardware and software architectures of various Embedded Systems.
- CO5 Perform various Embedded communication protocols.

<b>UNIT I</b>	<b>PIC MICROCONTROLLER</b>	<b>9</b>
PIC Microcontroller: CPU Architecture and instruction sets: Hardware architecture and pipelining - program memory consideration – register file structure and addressing modes – CPU Register – instruction set.		
<b>UNIT II</b>	<b>MICROCONTROLLER TIMER AND INTERRUPTS</b>	<b>9</b>
Timer and interrupts: timer use – interrupt logic – timer 2 scalar initialization. External interrupts and timers: timer0 compare / capture mode – timer1/ CCP programmable period scalar. Timer1 and sleep mode- PWM O/P		
<b>UNIT III</b>	<b>MSP430 MICROCONTROLLER</b>	<b>9</b>
MSP430 - Functional Block Diagram – Pin Diagram – Low Power Modes – CPU Architecture – Functions and Subroutines – Calling, Parameter passing and Returning – Interrupts – Timers		
<b>UNIT IV</b>	<b>ARCHITECTURE OF EMBEDDED SYSTEMS</b>	<b>9</b>
Categories of embedded systems – specialties of embedded systems – Recent trends in embedded systems –Hardware architecture –Software architecture –Communication software – Process of generation of executable image – development/testing tools.		
<b>UNIT V</b>	<b>EMBEDDED COMMUNICATION PROTOCOLS</b>	<b>9</b>
Serial/Parallel Communication - Serial communication protocols - UART - RS232 standard – Serial Peripheral Interface - Inter Integrated Circuits – Ethernet - Universal serial Bus - Controller Area Network - Parallel communication protocols – ISA / PCI Bus protocols.

**Course Objective (s):**The purpose of learning this course is to:

1	Enables student to understand the basics of Internet of things and protocols.
2	Learn about the different protocols used in IoT
3	Learn about the middleware for Internet of Things
4	Understand the concepts of Web of Things
5	Introduces some of the application areas where Internet of Things can be applied.

**Course Outcome (s) (COs):**At the end of this course, learners will be able to:

CO1	Realize the vision of IoT and from a global context
CO2	Analyze the types of protocol used in IoT
CO3	Identify the Devices, Gateways and Data Management in IoT
CO4	Discuss the concepts of Web of Things
CO5	Select the appropriate components for the given application.

<b>UNIT I</b>	<b>OVERVIEW OF IoT</b>	<b>9</b>
What is the IoT and why is it important? Elements of an IoT ecosystem, Technology drivers, Business drivers, Trends and implications, Overview of Governance, Privacy and Security Issues.		
<b>UNIT II</b>	<b>IoT PROTOCOLS</b>	<b>9</b>
Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Issues with IoT Standardization – Unified Data Standards – Protocols – IEEE802.15.4–BACNet Protocol– Modbus – KNX – Zigbee– Network layer – APS layer – Security		
<b>UNIT III</b>	<b>IoT ARCHITECTURE</b>	<b>9</b>
IoT Open source architecture (OIC)- OIC Architecture & Design principles- IoT Devices and deployment models- IoTivity: An Open source IoT stack - Overview- IoTivity stack architecture- Resource model and Abstraction.		
<b>UNIT IV</b>	<b>WEB OF THINGS</b>	<b>9</b>
Web of Things versus Internet of Things – Two Pillars of the Web – Architecture Standardization for WoT– Platform Middleware for WoT – Unified Multitier WoT Architecture – WoT Portals and Business Intelligence.		
<b>UNIT V</b>	<b>IoT APPLICATIONS</b>	<b>9</b>
IoT applications for industry: Future Factory Concepts, Brownfield IoT, Smart Objects, Smart Applications. Study of existing IoT platforms /middleware, IoT- A, Hydra etc. IoT applications for smart cities.

**Prerequisite Course (s)**

Nil

**Course Objective (s):** The purpose of learning this course is to:

- 1 Make students familiar with fundamentals of mobile communication systems
- 2 Choose system (TDMA/FDMA/CDMA) according to the complexity, installation cost, speed of transmission, channel properties etc
- 3 Identify the requirements of mobile communication as compared to static communication
- 4 Identify the limitations of 2G and 2.5G wireless mobile communication and use design of 3G and beyond mobile communication systems

**Course Outcome (s) (COs):** At the end of this course, learners will be able to:

- CO1 Identify with various generations of mobile communications.
- CO2 Realize the concept of cellular communication.
- CO3 Explain the basics of wireless communication
- CO4 Combine GSM mobile communication standard, its architecture, logical channels, advantages and limitations
- CO5 Gain knowledge of IS-95 CDMA mobile communication standard, its architecture, logical channels, advantages and limitations in LTE techniques.

<b>UNIT I</b>	<b>INTRODUCTION TO MOBILE COMMUNICATION</b>	<b>9</b>
Overview of wireless communication, cellular communication, different generations and standards in cellular communication system, satellite communication including GPS, wireless local loop, cordless phone, paging systems, RFID		
<b>UNIT II</b>	<b>COMMON CELLULAR SYSTEM COMPONENTS</b>	<b>9</b>
Cellular networks architecture, Signal strength and cell area, Common cellular networks components, Components Identification and call establishment.		
<b>UNIT III</b>	<b>WIRELESS NETWORK ARCHITECTURE AND OPERATION</b>	<b>9</b>
Fundamentals of Cellular Architecture, Mobility Management in Wireless Network, Power Management in Wireless Network, Security in Wireless Network.,		
<b>UNIT IV</b>	<b>GSM ARCHITECTURE</b>	<b>9</b>
Fundamentals of GSM Network, GSM Frequency Band, GSM PLMN, GSM Objectives, GSM Services, GSM PLMN Subsystems. GSM PLMN Interfaces , GSM Radio Interface, GSM Abis Interface, GSM A Interface , GSM Interface for connecting other components, Mapping of GSM Layers onto OSI Layers, Protocols used across other interfaces of GSM		
<b>UNIT V</b>	<b>4G –TECHNOLOGY</b>	<b>9</b>
Long Term Evolution (LTE), Mobile Satellite Communication, Introduction to Mobile Adhoc Networks, Li-Fi Communication, Ultra-Wideband Communication, Mobile data networks, Wireless Standards IMT 2000, Introduction to 4G and concept of NGN

**Course Objective (s):**The purpose of learning this course is to:

- 1 Gain knowledge about the various physiological parameters both electrical and non-electrical and the methods of recording and also the method of transmitting these parameters.
- 2 Study about the various assist devices used in the hospitals.
- 3 Gain knowledge about equipment used for physical medicine and the various recently developed diagnostic and therapeutic techniques.

**Course Outcome (s) (COs):**At the end of this course, learners will be able to:

- CO1 Understand the Origin of Bioelectric potential and their measurements using appropriate electrodes and Transducers.
- CO2 Understand how to measure various biochemical and nonelectrical parameters of human system.
- CO3 Understand the Electro-physiology of various systems and recording of the bioelectric signals.
- CO4 Understand the working principles of various Imaging techniques.
- CO5 Understand the design aspects of various Assist and Therapeutic Devices.

Regulation 2018			Total Hours			15
Category	Course Code	Course Name	Hours / Week			C
			L	T	P	
X	18CSX005T	DATA CENTER AND CLOUD BASICS	1	0	0	1

Prerequisite Course (s)

NIL

Course Objective (s):

The purpose of learning this course is to:

- 1 Learn the basics of CBO and Cloud Services.
- 2 Learn and Practice the features available in Office 365.
- 3 Know the basic operations of Data Center.
- 4 Learn the working of SCCM.

Course Outcome (s) (COs):

At the end of this course, learners will be able to:

- CO1 Understand the basics of CBO and Cloud Services.
- CO2 Make use of the features available in Office 365.
- CO3 Discuss the basic operations of Data Center.
- CO4 Understand the working of SCCM.

CO-PO Mapping

COs	POs												PSOs	
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

**TOPICS**

- CBO Overview
  - Services/Functions, Offerings, Technology stack, Japan centric Delivery
- Cloud Computing
  - Cloud Overview, Private/Public/Hybrid IaaS/PaaS/SaaS Service Providers Cloud computing Services
- DevOps Overview
  - Dev ops model, Continuous Integration, Continuous Delivery, Process and Tools, Micro

Curriculum and S

services

Office 365 Overview

- Office 365 Basics, Different Services in Office 365, Office 365 tools, Office 365 Setup/Configuration, Active Directory Federation Services (ADFS)

Datacenter Operations Overview

- Datacenter Components, Datacenter Operations support, Hybrid cloud Management, IT Service Management.

Networking Paradigm

- Network Devices, Data/voice network services, LAN/WAN Basics, Firewall Overview

Windows 10 - End User Computing Basics

- Windows 10 Operating System, Antivirus Management, Patches Management, Devices Configuration

Windows SCCM - Operations Manager Overview

Curriculum and Syllabus

Regulation 2018		Semester	Total Hours			C
Category	Course Code	Course Name	Hours / Week			
			L	T	P	
X	18ECX004T	CCNAV7 - Introduction to Networks	1	0	0	1

**Prerequisite Course (s)**

Digital electronics

**Course Objective (s):**

The purpose of learning this course is to:

1	Understand the Basic Networking configurations and Protocol Models
2	Familiarize the physical layer and data link layer concepts
3	Configure the routers on IPv4 and IPv6 address
4	Study the functions of Transport layer and Application Layer
5	Understand the network security essentials across systems

**Course Outcome (s) (COs):**

At the end of this course, learners will be able to:

CO1	Build simple LANs, perform basic configurations for routers and switches
CO2	Provide access to local and remote network resources and implement IPv4 and IPv6 addressing schemes.
CO3	Enable end-to-end connectivity between remote devices
CO4	Configure and troubleshoot connectivity a small network using security best practices.
CO5	Develop critical thinking and problem-solving skills using real equipment and Cisco Packet Tracer.

**CO-PO Mapping**

Category	Course Code	Course Name	Hours / Week			
			L	T	P	
X	18ECX005T	Artificial Intelligence in Software Testing	1	0	0	1

**Prerequisite Course (s)**

DS & OOPS

**Course Objective (s):**

The purpose of learning this course is to:

- 1 Study the concepts of Artificial Intelligence.
- 2 Learn the methods of solving problems using Artificial Intelligence.
- 3 To learn to represent knowledge in solving AI problems
- 4 To learn the criteria for Software testing.
- 5 To learn the design of Software Development Cycles.

**Course Outcome (s) (COs):**

At the end of this course, learners will be able to:

- CO1 Identify Appropriate AI Methods And Characteristics
- CO2 Implement basic AI problem solving algorithms.
- CO3 Identify the Knowledge Inference
- CO4 Implement the Software Testing
- CO5 Identify the Software Development cycle

3: Substantial (High)

UNIT I	INTRODUCTION TO ARTIFICIAL INTELLIGENCE	3
Introduction-Definition – Future of Artificial Intelligence – Characteristics of Intelligent Agents – Typical Intelligent Agents.		
UNIT II	PROBLEM SOLVING METHODS	3
Problem solving Methods – Search Strategies- Uninformed – Informed – Heuristics – Local Search Algorithms and Optimization Problems -Searching with Partial Observations.		
UNIT III	KNOWLEDGE INFERENCE	3
Knowledge representation -Production based system, Frame based system. Inference – Backward chaining, Forward chaining, Rule value approach,		
UNIT IV	INTRODUCTION TO SOFTWARE TESTING	3
Software testing-Importance of Software testing- How to conduct Software testing, Basic terminology of Software testing- Manual Testing Process-Difference between Manual and Automated Testing-Software testing Roles and Responsibilities		
UNIT V	SOFTWARE DEVELOPMENT LIFE CYCLE	3
Phases of Software Development Life Cycle : Requirements Phase, Analysis Phase, Design phase, Coding Phase, Testing phase, Release and Maintenance Phase. Software Development Life Cycle Models: Waterfall Model, V Model, Agile Model, Prototype Model, Spiral Model.

UNIT I	<b>Introduction to Digital Electronics and VLSI Design</b>	3
Sequential Circuits, Combinational Circuits, Counter, Shift Register. VLSI Design Flow - Types of VLSI / ASIC - Advanced Technologies - Various fields and scope of VLSI - Digital concepts.		
UNIT II	<b>Introduction to Verilog</b>	3
Concepts in Verilog - Different types of modeling – Operators - Assignments and delay – Branching Statements- Procedural Constructs.		
UNIT III	<b>Design and implementation with test bench code</b>	5
Writing test benches in Verilog: Always, Initial Constructs, display, monitor, task, timescale. Design and implementation of FSM, single port RAM and ROM, serial peripheral interface.		
UNIT IV	<b>Introduction to System Verilog-I</b>	4
Basics of System Verilog and Introduction - SV Test bench architecture – Features - Data types - Arrays and structure - Scheduler - Procedural statements and flow Control - Processes and processes control.		
<b>Text Book (s)</b>

**Prerequisite Course (s)**

Digital System Design using Verilog

**Course Objective (s):**

The purpose of learning this course is to:

- 1 Understand the concepts in system verilog and its types of modeling operators.
- 2 Understand the concept of randomization and interface in system verilog.
- 3 Understand the basic UVM Test bench architecture.

**Course Outcome (s) (COs):**

At the end of this course, learners will be able to:

- CO1 Analyse the basic digital system components using various system verilog modeling operators. (K4)
- CO2 Create a digital system components / IP cores and verify the functionality of the design using system verilog. (K6)
- CO3 Outline the concept of UVM in the VLSI design.(K2)

Category	Course Code	Course Name	Hours / Week			C								
			L	T	P									
S	18ECS202J	Analog and Digital Electronics	3	0	2	4								
<b>Prerequisite Course (s)</b>														
Basic Electrical and Electronics Engineering														
<b>Course Objective (s):</b>														
1	To understand the methods of biasing the Transistors & to know construction and characteristics of special diodes													
2	To simplify Boolean expressions using basic postulates of Boolean algebra.													
3	To synthesize the basic combinational circuits													
4	To synthesize the basic Sequential circuits													
5	To synthesize combinational and sequential logic using programmable logic devices.													
<b>Course Outcome (s) (COs):</b>														
CO1	Review various biasing techniques used in BJT and its characteristics.													
CO2	Illustrate the Boolean functions and Boolean Expressions.													
CO3	Design and Analyze the combinational circuits.													
CO4	Design and Analyze the sequential circuits.													
CO5	Analyze the characteristics and structure of different memory systems and programmable logic Devices													
<b>CO-PO Mapping</b>

2: Moderate (Medium)

3: Substantial (High)

UNIT I	TRANSISTORS AND SPECIAL DIODES	9
Bipolar Junction Transistor - CB, CE, CC Configurations and Characteristics - The Metal-oxide-semiconductor FET (MOSFET) - The Low-frequency Common Source and Common Drain Amplifiers - Biasing the FET - Construction & Characteristics of UJT- SCR - TRIAC - DIAC.		
UNIT II	BOOLEAN ALGEBRA AND LOGIC GATES	9
Boolean postulates and laws -De-Morgan's Theorem- Principle of Duality- Boolean expression - Minimization of Boolean expressions- Sum of Products (SOP), Product of Sums (POS) and its Conversion- Minimization of Boolean Expression upto 4 variables using Karnaugh map, Tabulation Method-Don't care conditions. Introduction to Logic Gates - Implementation of Basic Gates using Universal gates.		
UNIT III	COMBINATIONAL CIRCUITS	9
Design procedure of Combinational circuits: Adders - Subtractors - Parallel adder/ Subtractor- Carry look ahead adder- BCD adder- 2- bit Magnitude Comparator- Multiplexer / Demultiplexer - Encoder / Decoder - Parity Generator/Checker - Code converters: Binary to Gray - Gray to Binary - BCD to Excess 3 - Excess 3 to BCD.		
UNIT IV	SEQUENTIAL CIRCUITS	9
Flip flops SR, JK, T, D and Master slave - Characteristic and excitation tables and equations -Level and Edge Triggering -Realization of one flip flop using other flip flops - counters - Ring counters and Sequence detector - Design of Synchronous counters - Registers - shift registers- Universal shift register.		
UNIT V	MEMORY AND PROGRAMMABLE LOGIC DEVICES	9
Classification of memories - ROM Organization: PROM, EPROM, EEPROM - RAM Organization: Static RAM, Dynamic RAM - (PLA) - Programmable Array Logic (PAL) - Field Programmable Gate Arrays (FPGA) - Implementation of combinational logic circuits using PROM, PLA, PAL.		
LIST OF EXPERIMENTS		15
<ol style="list-style-type: none"> <li>1. Design and construct Fixed Bias amplifier circuit using BJT</li> <li>2. Design and construct BJT Common Emitter Amplifier using voltage divider bias (self-bias).</li> <li>3. Design and implementation of Adder / subtractor using basic gates and MSI devices.</li> <li>4. Design and implementation of 2-bit and 8-bit magnitude comparator using basic gates and MSI devices.</li> <li>5. Design and implementation of multiplexers and demultiplexers.</li> <li>6. Design and testing of flip-flops using gates.</li> <li>7. Implementation of SISO, SIPO, PISO and PIPO shift registers using flip-flops.</li> </ol>		
Text Book (s)		
1	S. Salivahanan, N. Suresh Kumar and A. Vallavaraj, Electronic Devices and Circuits, 4th Edition, Tata McGraw-Hill Education Pvt. Ltd, 2017.	
2	Morris Mano, M, - Digital Design, Third Edition, Prentice Hall of India, New Delhi, 2003.	

Regulation 2018		Semester IV	Total Hours			60
Category	Course Code	Course Name	Hours / Week			C
			L	T	P	
S	18ECS203J	Microprocessor and Microcontroller	3	0	2	4

**Prerequisite Course (s)**

Analog and Digital Electronics

**Course Objective (s):**

- To understand Basic architectures and operational features of the processors and Controllers
- To Design and understand the multiprocessor configurations
- To Understand the interfacing concepts of the peripheral devices with that of the Processors
- To study the Architecture of 8051 microcontroller
- To design a microcontroller based system

**Course Outcome (s) (COs):**

- CO1 Observe the architecture, instruction set and addressing modes of 8086.
- CO2 Record the configurations of multiprocessor.
- CO3 Describe the various interfaces such as 8255, 8251, 8254 etc.,
- CO4 Discuss the architecture of 8051 and apply the fundamentals of assembly level programming of 8051 controller.
- CO5 Know various real time applications of Microcontrollers.

**CO-PO Mapping**

COs	POs												PSOs	
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	3	3	3	2	-	-	-	3	2	-	-	3	3
CO2	3	2	3	2	2	-	-	-	3	2	-	-	2	3
CO3	3	3	2	3	2	-	-	-	3	2	-	-	3	3
CO4	3	2	3	2	2	-	-	-	3	2	-	-	3	3
CO5	3	3	2	3	2	-	-	-	3	2	-	-	3	3
CO (Avg)	3	2.6	2.6	2.6	2	-	-	-	3	2	-	-	2.8	3

1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

<b>UNIT I</b>	<b>8086 MICROPROCESSOR</b>	<b>9</b>
8086 microprocessor –Register organization of 8086- Architecture – Signal description of 8086 – Minimum and maximum mode of 8086 system - Addressing Modes - Instruction Set - Assembly Language Programming - Interrupts and Interrupt Service Routines.		
<b>UNIT II</b>	<b>MULTIPROCESSOR CONFIGURATION</b>	<b>9</b>
Interconnection Topologies - Coprocessor Configuration – Closely Coupled Configuration – Loosely Coupled Configuration – 8087 Numeric Data Processor – Architecture – Bus Arbitration - 8089 I/O Processor – Architecture.		
<b>UNIT III</b>	<b>INTERFACING WITH MICROPROCESSORS</b>	<b>9</b>
Memory interfacing with Microprocessors – Parallel Communication Interface (8255) – Serial Communication Interface (8251) – Timer (8254) - Keyboard/display controller (8279) – DMA controller (8237).		
<b>UNIT IV</b>	<b>MICROCONTROLLER</b>	<b>9</b>
Architecture of 8051 – Special Function Registers (SFRs) - I/O Pins Ports and Circuits - Instruction set - Addressing modes - Assembly language programming.		
<b>UNIT V</b>	<b>MICROCONTROLLER PROGRAMMING</b>	<b>9</b>
Programming 8051 Timers - Serial Port Programming - Interrupts Programming – LCD & Keyboard Interfacing - ADC, DAC & Sensor Interfacing - External Memory Interface- Stepper Motor, Traffic light Controller.		
<b>LIST OF EXPERIMENTS</b>		<b>15</b>
<ol style="list-style-type: none"> <li>1. Arithmetic and Logical Operation using 8086 Microprocessor.</li> <li>2. Programming with 8086- Code Conversion and Matrix Multiplication.</li> <li>3. Interfacing with 8086-Parallel Communication Interface</li> <li>4. Interfacing with 8086-Serial Communication Interface.</li> <li>5. Interfacing with 8086 - Keyboard and Display Controller.</li> <li>6. Arithmetic and Logical Operation using 8051 Microcontroller.</li> <li>7. Stepper motor Interfacing with 8051 Microcontroller</li> </ol>

Regulation 2018					Total Hours	15								
Category	Course Code	Course Name	Hours / Week			C								
			L	T	P									
X	18CSX011L	GOOGLE CLOUD COMPUTING FOUNDATIONS	0	0	2	1								
<b>Prerequisite Course (s)</b>														
Nil														
<b>Course Objective (s):</b>														
The purpose of learning this course is to:														
1	Understand the foundations of Google Cloud Computing.													
<b>Course Outcome (s) (COs):</b>														
At the end of this course, learners will be able to:														
CO1	Design and develop applications using google cloud.													
<b>CO-PO Mapping</b>														
COs	POs												PSOs	
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	2	3	1	2	-	-	-	1	1	-	1	3	3
CO (Avg.)	3	2	3	1	2	-	-	-	1	1	-	1	3	3
<b>MODULES</b>														
<ol style="list-style-type: none"> <li>1. Cloud Basics: Discuss what the cloud is and why it's a technology and business game changer</li> <li>2. User interface: Describe the different ways a user can interact with Google Cloud</li> <li>3. Compute: Discover the compute options in Google Cloud</li> <li>4. Storage: Implement a variety of structured and unstructured storage models</li> <li>5. Managed Services: Discuss the different application managed service options in the cloud</li> <li>6. Security: Outline how security in the cloud is administered in Google Cloud</li> <li>7. Networks: Demonstrate how to build secure networks in the cloud</li> <li>8. Automation: Identify cloud automation and management tools</li> <li>9. Big data: Discover a variety of managed big data services in the cloud</li> <li>10. Machine learning: Explain what machine learning is, the terminology used, and its value proposition</li> </ol>
